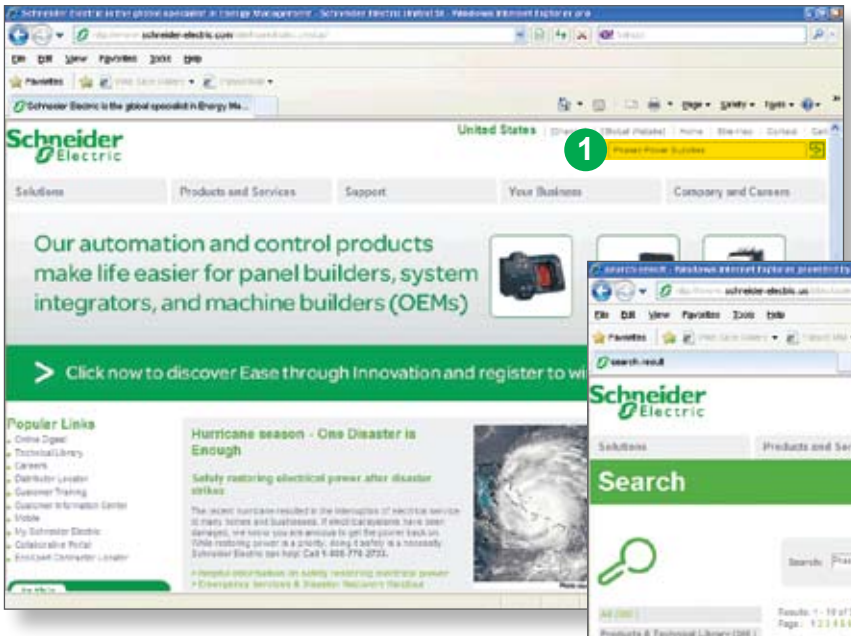
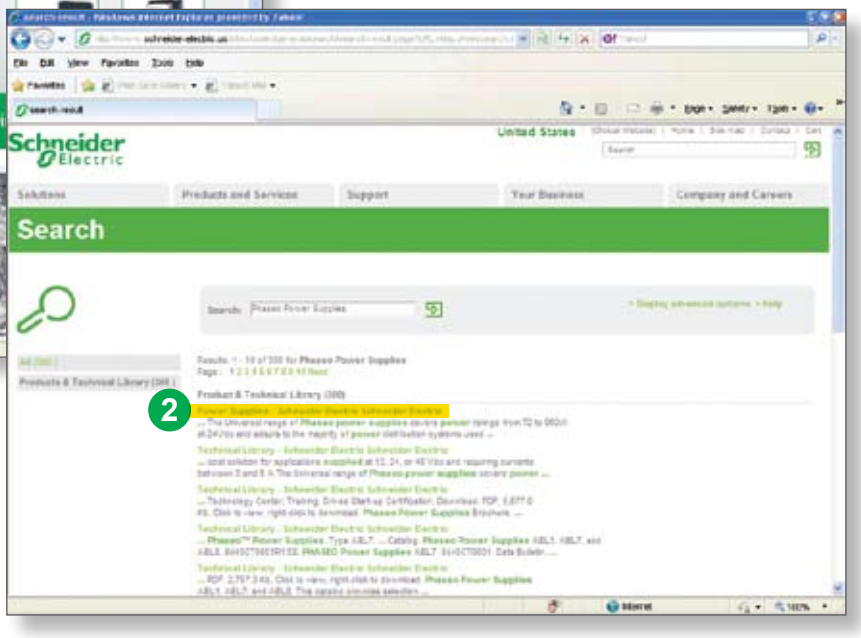
Phaseo™ power supplies

Go online to www.schneider-electric.com for technical information about products listed in this catalog, including:

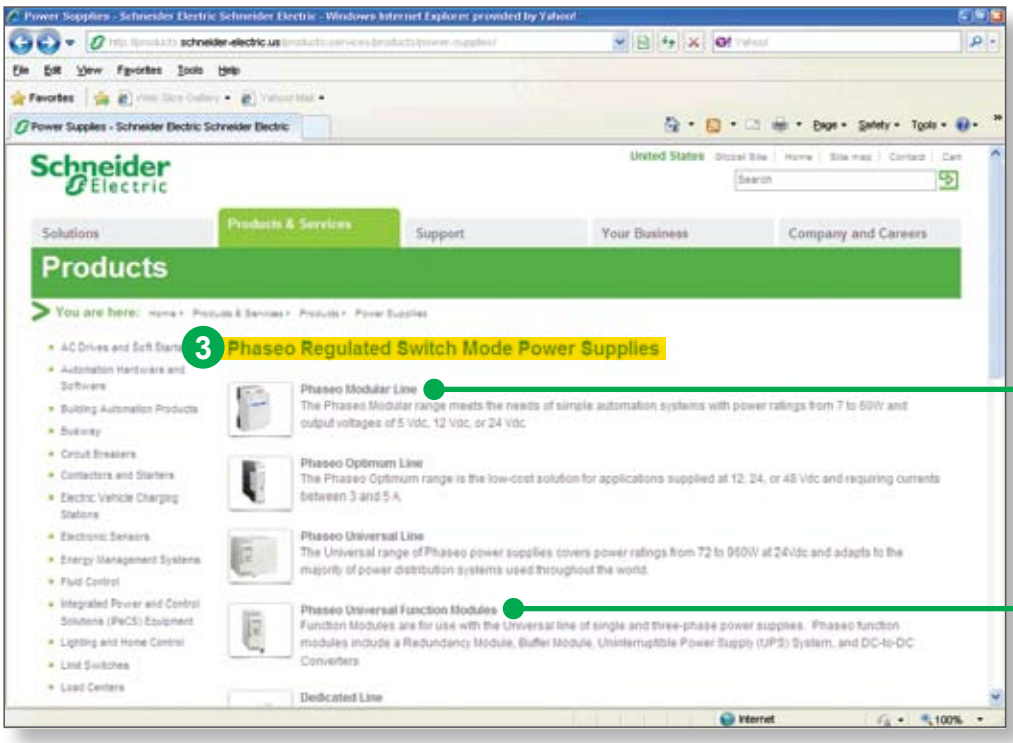
To learn more about Phaseo™ electronic switch mode power supply products, follow these steps...



1 **Go to www.schneider-electric.com and enter "Phaseo Power Supplies" in the Search Box.**

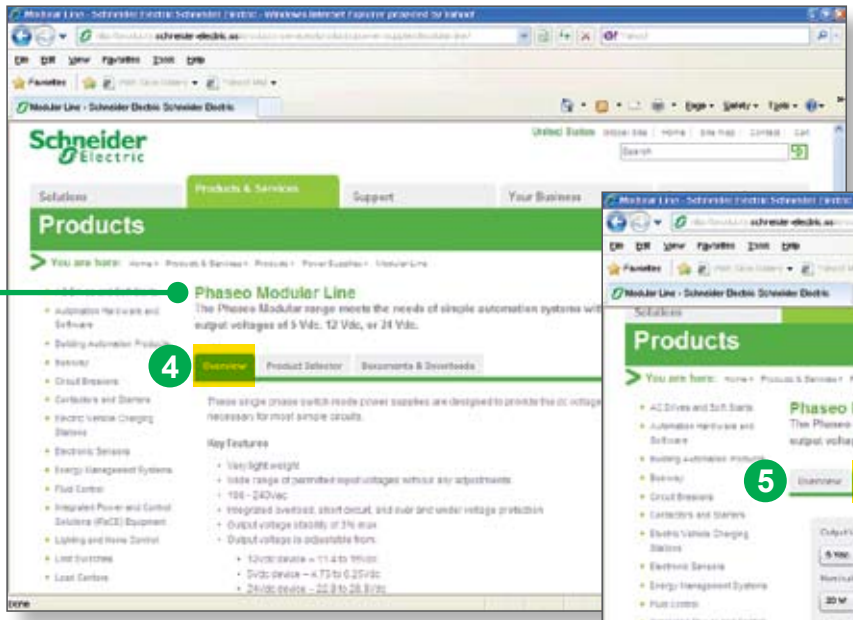


2 **On the Search results page, select the first listing under "Product & Technical Library" entitled Power Supplies - Schneider Electric Schneider Electric.**

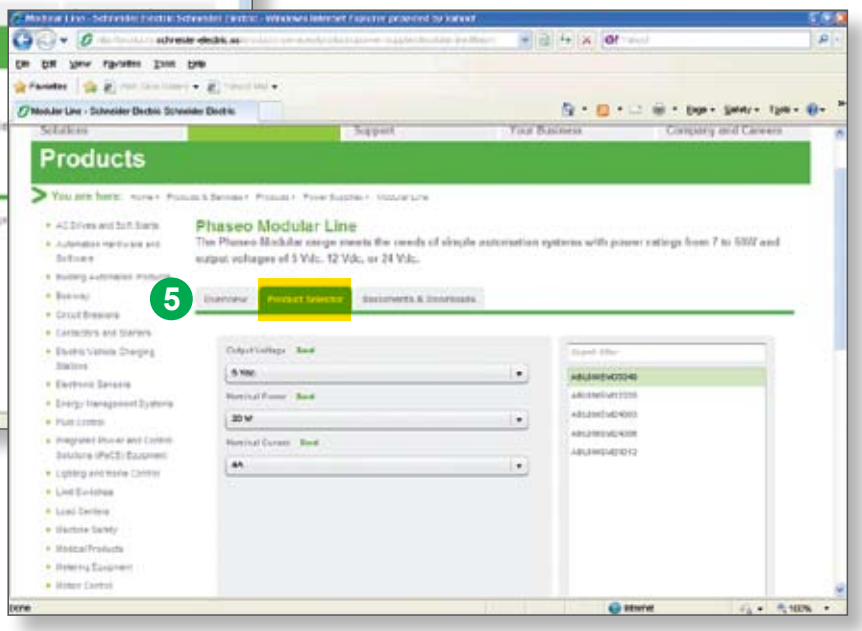


3 **On the "Products" page – under "Phaseo Regulated Switch Mode Power Supplies" – select from the following product lines, including: Modular, Optimum, Universal, Universal Function Modules and Dedicated Line.**

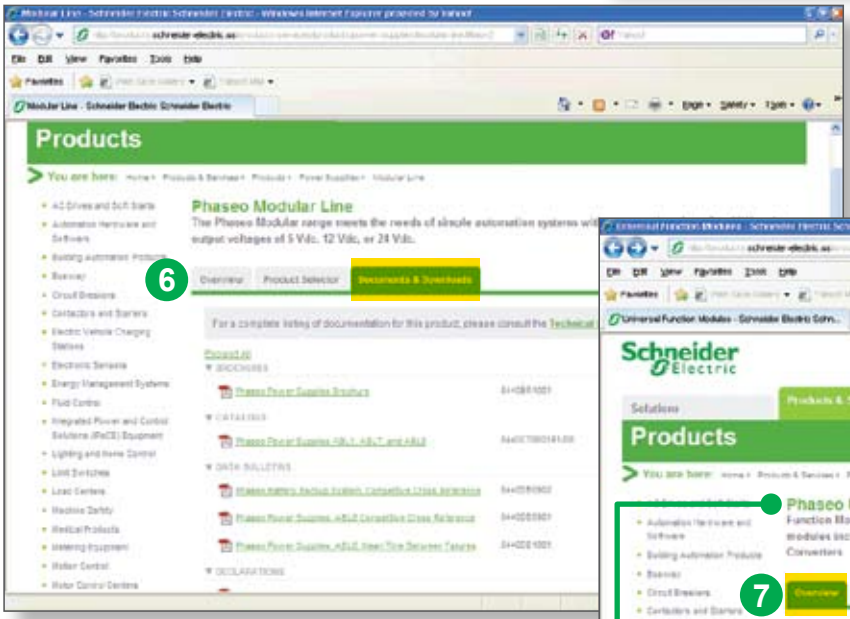
> Specifications > Dimensions > References
> Curves > Links to user guides and CAD files



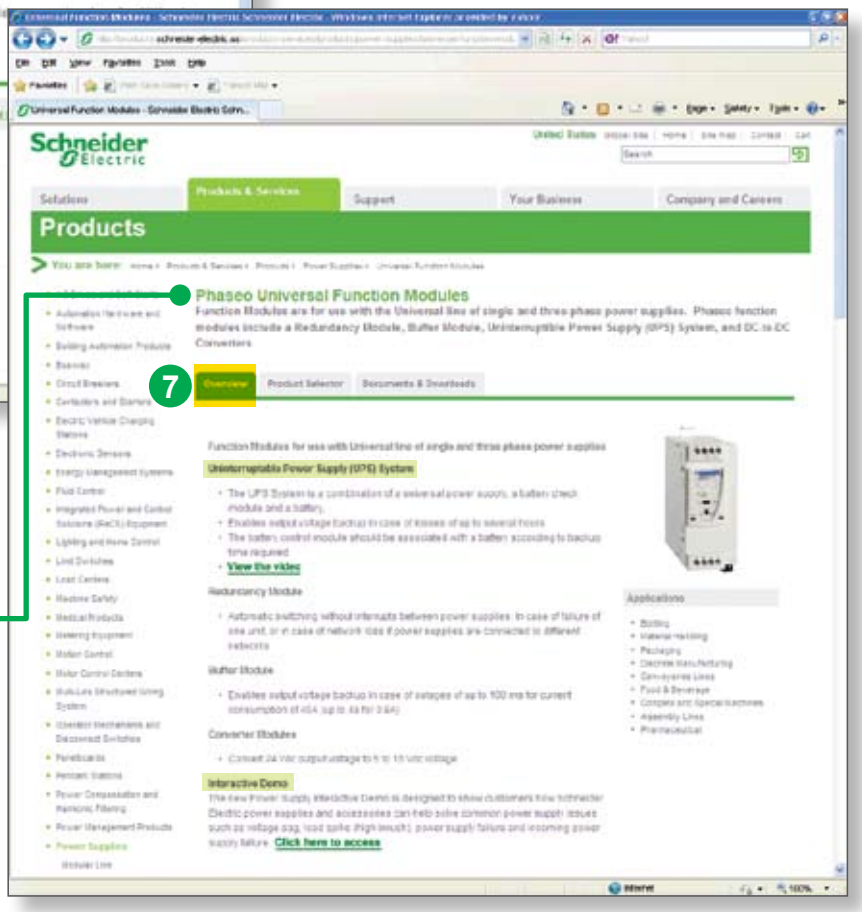
4 For example...select the "Phaseo Modular Line" and click on Overview for Key Features and Applications.



5 Use the Product Selector to identify the Phaseo Power Supply with the right specifications to meet your requirements.



6 Select Documents & Downloads to view and select Product Brochures, Catalogs, Data Bulletins, Declarations, Handouts and Instruction Bulletins.



7 And, when you select "Phaseo Universal Function Modules" and click on Overview, you'll find out about the Uninterruptable Power Supply (UPS) System and the Interactive Demo.

Phaseo™ power supplies
Regulated switch mode power supplies

Overview

The Phaseo™ electronic switch mode power supply offer is designed to provide the DC voltage necessary for the PLC and automation system equipment control circuits.

These power supplies include five ranges:
- Modular, Optimum and Universal ranges for common applications (ABL8 and ABL7)
- AS-Interface range for the AS-Interface cabling system (AS-Interface)
- Dedicated range for repetitive equipment (ABL1)

The Phaseo offer meets all the needs encountered in industrial, commercial and residential applications. With phase-to-neutral (N-L1), phase-to-phase (L1-L2) or 3-phase (L1-L2-L3) connection to the line supply, these electronic switch mode power supplies provide a quality of output current that is suitable for the loads supplied and compatible with the line supply available in the equipment. Clear guidelines are given for selecting protection devices which are often used with them, and thus a comprehensive solution is provided that can be used in total safety.

Phaseo switch mode power supplies

Phaseo switch mode power supplies are totally electronic and their output voltage is regulated. The use of electronics makes it possible to significantly improve the performance of these power supplies, which offer:
- Very compact size
- Integrated overload, short-circuit, overvoltage and undervoltage protection
- Very wide input voltage range for the Universal range
- High degree of output voltage stability
- Good performance
- Diagnostics via LED indicators on the front panel
- Remote diagnostics via a relay contact for the Universal range

Phaseo power supplies deliver a stabilized ⎓ output voltage that is precise to 3%, whatever the load from a ∿ line supply, within the ranges of:
- For Modular, Optimum, Dedicated and AS-Interface ranges:
  - 100 to 240 V ∿ for phase-to-neutral (N-L1) or phase-to-phase (L1- L2) connection
- For the Universal range:
  - 85 to 550 V ∿ for phase-to-neutral (N-L1) or phase-to-phase (L1- L2) connection
  - 360 to 550 V ∿ for 3-phase connection (L1-L2-L3)

Conforming to IEC standards and UL, CSA, TÜV and C-Tick certified, they are suitable for industrial use.

Phaseo power supplies also incorporate:
- Output voltage adjustment potentiometer in order to be able to compensate for any line voltage drops in installations with long cable runs
- Direct mounting on 35 mm DIN rails, optional on Dedicated range *(1)*

(1) The Optimum and AS-Interface ranges can also take 75 mm DIN rails.

Overview *(continued)*

Phaseo™ switch mode power supplies (continued)

Phaseo regulated switch mode industrial supplies are offered in three ranges (Modular, Optimum and Universal), complemented by the AS-Interface and Dedicated ranges for repetitive machines.

Phaseo Modular range

The Phaseo Modular range meets all the needs of simple automation systems with power ratings from 7 to 60 W and an output voltage of 5 V ⎓, 12 V ⎓ or 24 V ⎓.
The shape and compact nature of its casing mean that it can be incorporated either in a modular panel or mounted on a DIN rail in a cabinet. Direct mounting on a panel (using its two retractable legs) and the choice of wires exiting at the top or bottom (except for the **ABL7RM24025** model) make it an easy product to integrate.

Phaseo Optimum range

The Phaseo Optimum range is the low-cost solution for applications supplied in 12 V ⎓, 24 V ⎓ or 48 V ⎓ and requiring currents between 3 and 5 A.
The Optimum range of Phaseo power supplies delivers a voltage that can guarantee the PLC logic states. In the event of an overload the power supply protection trips so that, once the detected fault has been eliminated, the power supply reverts to its nominal state.
Since the Optimum range of Phaseo power supplies does not have PFC *(Power Factor Correction)*, they do not meet the requirements of standard IEC/EN 61000-3-2 (except for **ABL7RP1205/7RP4803** models).

Phaseo Universal range

The Universal range of Phaseo power supplies covers power ratings from 72 to 960 W in 24 V ⎓ and adapts to the majority of power distribution systems used throughout the world. The same power supply can thus be connected phase-to-neutral (N-L1) or phase-to-phase for line supplies ranging from 100 V ∿ to 500 V ∿ nominal. This product offering also includes three phase units. In addition, this range offers:

- Diagnostic functions (local or remote)
- User choice of operating mode in the event of an overload (current limiting or stop)
- Function modules to help ensure continuity of service:
  - Protection against microbreaks or prolonged outages by means of the Buffer module and Battery Control modules
  - Paralleling and redundancy functions by means of the Redundancy module
- Power reserve (boost function) for absorbing the transient current peaks required by the application

With the Universal range of power supplies, it is possible to satisfy the need for auxiliary voltage (5 V ⎓ to 15 V ⎓) using ⎓ / ⎓ Converter modules.

The incorporation of a PFC *(Power Factor Correction)* input filter reduces harmonic pollution to a minimum level across the entire Universal range, ensuring compliance with the requirements of standard IEC/EN 61000-3-2.

Phaseo AS-Interface range

The 72 and 144 W AS-Interface range of Phaseo power supplies is designed to deliver a voltage of 30 V ⎓, which is a prerequisite for the AS-Interface cabling system. These electronic switch mode power supplies with phase-to-neutral (N-L1) connection help ensure the quality of the output current in accordance with the electrical specifications and in compliance with standard EN 50295.

Phaseo Dedicated range

The Dedicated range of Phaseo power supplies from 60 to 240 W is designed for integration in repetitive equipment requiring a voltage of 12 V ⎓ or 24 V ⎓.
These electronic switch mode power supplies, with phase-to-neutral (N-L1) connection, with or without anti-harmonic filter and UL 508, CSA and TÜV certified, meet all the needs encountered in commercial machines and standard catalog machines.

Specifications of the 24 V ⎓ operating voltage

The permissible tolerances for the operating voltage are listed in publications IEC/EN 61131-2 and DIN 19240.

For a nominal voltage Un of 24 V ⎓, the extreme operating values are from - 15% to + 20% of voltage Un, whatever the supply fluctuations in the range - 10% to + 6% (defined by standard IEC 38) with load variations in the range 0 to 100% of nominal current In.

All 24 V ⎓ Phaseo™ power supplies are designed to provide an output voltage within these ranges.

It may be necessary to use a voltage measurement relay to detect when the normal voltage limits are being surpassed and to deal with the consequences of this.
The Universal range has integrated voltage detection.

Recommendations for the use of 24 V ⎓ voltage

The Phaseo power supplies can be used to supply control circuits with Protection Extra Low Voltage (PELV) or Safety Extra Low Voltage (SELV) in compliance with standard IEC/EN 60364-4-41.

They have the following specifications:
- Double insulation between the input circuit (connected to the line supply) and the low voltage output circuit via an integrated isolation transformer
- Internal device limiting the output voltage to less than 60 V in the event of an internal detected fault

Harmonic pollution (power factor)

The current drawn by a power supply is not sinusoidal. This leads to the generation of harmonic currents that pollute the distribution system. European standard IEC/EN 61000-3-2 limits the harmonic currents produced by power supplies.

This standard covers all devices between 75 and 1000 W, drawing up to 16 A per phase and connected directly to the public distribution system. Devices connected downstream of a private, low voltage general transformer are therefore excluded. Regulated switch mode supplies always consume harmonic currents; a filter circuit (Power Factor Correction or PFC) must therefore be added to comply with standard IEC/EN 61000-3-2.

The **ABL8RPS / 8RPM / 8WPS24●●0** Universal range and the **ABL1RPM** Dedicated range of Phaseo power supplies comply with standard EN 61000-3-2 and can therefore be connected directly to public distribution systems.

Since the **ABL8MEM240●●** Modular range and **ABL7RM24025** and **ABL1REM12050/24025** Dedicated range of Phaseo power supplies have power ratings of < 75 W, they are not subject to the requirements of standard EN 61000-3-2. They can therefore be connected directly to public distribution systems.

The **ABL8REM** Optimum range and the **ABL1REM** Dedicated range of Phaseo power supplies must only be connected downstream of a private, low voltage general transformer.

Phaseo™ power supplies
Regulated switch mode power supplies
ABL7/ABL8 Modular range

ABL8MEM●●●●● *Zelio™ Logic*

Switch mode power supplies: Modular range

The **ABL8MEM/ABL7RM** power supply offer is designed to provide the DC voltage necessary for the control circuits of automation system equipment consuming 7 to 60 W in 5, 12 and 24 V ⎓. Comprised of six products, this range meets the needs encountered in industrial, commercial, and residential applications. These Modular electronic switch mode power supplies provide a quality of output current that is suitable for the loads supplied and compatible with the Zelio™ Logic range. Clear guidelines are given on selecting the upstream protection devices which are often used with them, and thus a comprehensive solution is provided that can be used in total safety.

The Modular range of Phaseo™ power supplies can be connected in phase-to-neutral (N-L1) or in phase-to-phase *(1)* (L1-L2). They deliver a voltage that is precise to 3%, whatever the load and whatever the type of line supply, within a range of 85 to 264 V ∿. Conforming to IEC standards and UL, CSA and TUV certified, they are suitable for global use. They have overload and short-circuit protection.

Due to their low power, the Modular range of Phaseo power supplies consume very little harmonic current and thus are not subject to the requirements of standard IEC/EN 61000-3-2 concerning harmonic pollution.

All the Modular range of Phaseo power supplies have protection devices to help ensure optimum performance of the automation system with an automatic reset mode on elimination of the detected fault.

All products are equipped with an output voltage adjustment potentiometer in order to be able to compensate for any line voltage drops in installations with long cable runs.

These power supplies also have a cable channel on the side of the unit so that the output wires can be directed to the top or bottom of the product as required.

They are designed for direct mounting on 35 mm DIN rails, or on a panel using their retractable mounting legs.

There are six references available in the Phaseo Modular range:

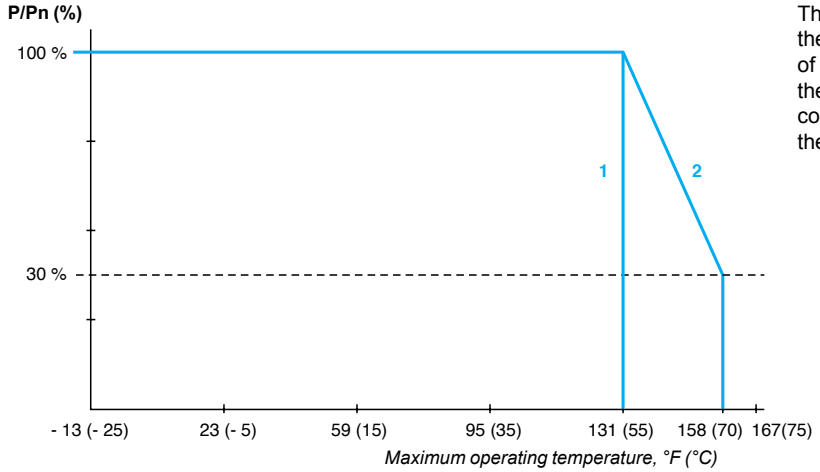
Output specifications

Behavior when short circuits and overloads occur

Phaseo™ power supplies are equipped with an electronic protection device. When an overload or short circuit occurs, the integrated protection interrupts the current supply before the output voltage drops below 19 V. The output voltage reverts to its nominal value upon elimination of the detected fault, eliminating the need to take any action.

Derating

The ambient temperature is a determining factor which limits the power that an electronic power supply can deliver continuously. Excessively high temperatures around the electronic components significantly reduce their life. The nominal ambient temperature for the Modular range of Phaseo power supplies is 131°F (55 °C). Above this temperature, derating is necessary up to a maximum temperature of 158 °F (70 °C) (except for the **ABL7RM24025** model).



The graph to the left shows the power as a percentage of the nominal power that the power supply can deliver continuously, depending on the ambient temperature.

1 With an **ABL7RM24025**
2 With an **ABL8MEM●●●●●**

Temporary overloads

The **ABL8MEM●●●●** Modular range of power supplies have an energy reserve that can be used to supply the application with 125% to 140% of the nominal output current for a maximum of 1 minute, depending on the model.

Phaseo™ power supplies
Regulated switch mode power supplies
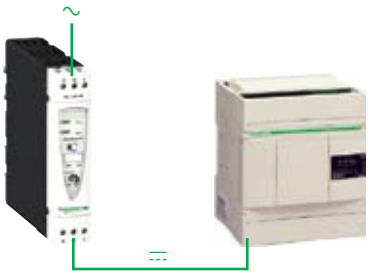
ABL7/ABL8 Optimum range



ABL8REM24030 *Twido*

Switch mode power supplies: Optimum range

The **ABL8REM/7RP** power supply offer is designed to provide the DC voltage necessary for the control circuits of automation system equipment consuming 60 to 144 W in 12, 24 and 48 V ⎓. Comprised of four products, this range meets the needs encountered in industrial, commercial, and residential applications. With phase-to-neutral (N-L1) or phase-to-phase (1) (L1-L2) connection, these slim electronic switch mode power supplies provide a quality of output current that is suitable for the loads supplied and compatible with both the Twido™ range and the smallest Modicon™ M340™ configurations, making them ideal partners. Their simplified specifications in comparison with the Universal offer also make them the low-cost solution for applications less affected by problems with the line supply, such as harmonic pollution and outages. Clear guidelines are given on selecting the upstream protection devices which are often used with them, and thus a comprehensive solution is provided that can be used in total safety.

The Optimum range of Phaseo™ power supplies delivers a voltage that is precise to 3%, whatever the load and whatever the type of line supply, within a range of 85 to 264 V ∿. Conforming to IEC standards and UL, CSA and TUV certified, they are suitable for global use. They have overload and short-circuit protection.

ABL8REM power supplies do not have anti-harmonic filters and do not satisfy the requirements of standard IEC/EN 61000-3-2 concerning harmonic pollution. **ABL7RP** power supplies, however, are equipped with a PFC *(Power Factor Correction)* filter, thus ensuring compliance with standard IEC/EN 61000-3-2.

The **Optimum** range of Phaseo power supplies includes protection devices to help ensure optimum performance of the automation system with an automatic reset mode on elimination of the detected fault.

In the event of an overload or short-circuit, the integrated protection interrupts the current supply before the output voltage drops below 19 V ⎓. The protection device resets itself automatically on elimination of the detected fault, which avoids having to take any action or change a fuse.

All products are equipped with an output voltage adjustment potentiometer in order to be able to compensate for any line voltage drops in installations with long cable runs.

These power supplies are designed for direct mounting on 35 and 75 mm DIN rails.

There are four references available in the **Optimum** range of Phaseo power supplies:

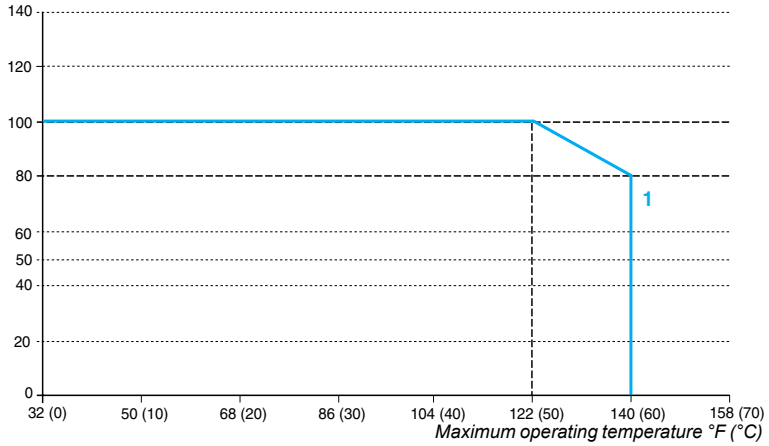
Output specifications

Derating

The ambient temperature is a determining factor which limits the power that an electronic power supply can deliver continuously. Excessively high temperatures around the electronic components significantly reduce their life.

The nominal ambient temperature for the Optimum range Phaseo™ power supplies is 122 °F (50 °C). Above this temperature, derating is necessary up to a maximum temperature of 140 °F (60 °C).

The graph below shows the power as a percentage of the nominal power that the power supply can deliver continuously, depending on the ambient temperature.



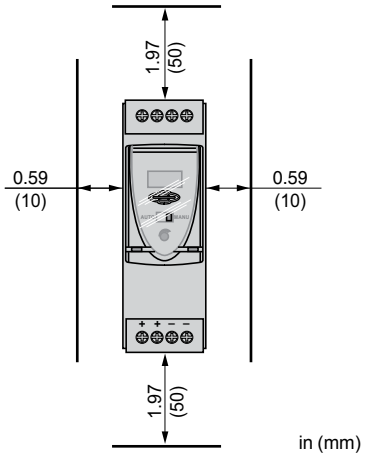
1 ABL8REM, ABL7RP mounted vertically

Derating should be considered in extreme operating conditions:

- Intensive operation (output current permanently close to the nominal current, combined with a high ambient temperature)
- Output voltage set above 24 Vdc (to compensate for line voltage drops, for example)
- Parallel connection to increase the total power

General rules

Intensive operation	See derating in above graph. Example for ABL8REM: ■ Without derating, from 32 to 122 °F (0 to 50 °C) ■ Derating of nominal current by 2% per additional °C, up to 60 °C. See chart.
Rise in output voltage	The nominal power is mounted. Increasing the output voltage means that the current delivered must be reduced.
Parallel connection to increase the total power	The total power is equal to the sum of the power supplies used, but the maximum ambient temperature for operation is 122 °F (50 °C). To improve heat dissipation, the power supplies must not be in contact with each other.



In all cases, there must be adequate convection around the products to assist cooling. There must be sufficient clearance around the Optimum range Phaseo power supplies:

- 1.97 inches (50 mm) above and below
- 0.59 inches (15 mm) on the sides

Phaseo™ power supplies

Regulated switch mode power supplies

ABL8 Universal range

ABL8RPS24050

Modicon™ M340™ automation platform

Switch mode power supplies: Universal range

The **ABL8RPS/RPM/WPS** power supply offer is designed to provide the DC voltage necessary for the control circuits of automation system equipment. Comprised of six products, this range meets the needs encountered in industrial and commercial applications. These compact electronic switch mode power supplies provide a quality of output current that is suitable for the loads supplied and compatible with the Modicon™ M340™, Premium™ and Quantum™ ranges. When used with additional function modules, they help ensure continuity of service in the event of network power outages or application malfunctions. Clear guidelines are given on selecting the function modules and upstream protection devices which are often used with them, and thus a comprehensive solution is provided that can be used in total safety.

The Universal range of Phaseo™ power supplies must be connected in phase-to-neutral or phase-to-phase for **ABL8RPS/RPM**, and in three-phase for **ABL8WPS**. They deliver a voltage that is precise to 3%, whatever the load and whatever the type of line supply, within the ranges:

- 85 to 132 V ∼ and 170 to 550 V ∼ for **ABL8RPS**
- 85 to 132 V ∼ and 170 to 264 V ∼ for **ABL8RPM**
- 340 to 550 V ∼ for **ABL8WPS**

Their very wide input voltage range allows a considerable reduction of parts held in stock and offers a distinct advantage in terms of machine design.

Conforming to IEC standards and UL and CSA certified, they are suitable for global use.

ABL8RPS/RPM and **ABL8WPS** power supplies are all equipped with a harmonic filter, ensuring compliance with standard IEC/EN 61000-3-2 concerning harmonic pollution.

All the Universal range of Phaseo power supplies have protection devices to help ensure optimum performance of the automation system. Their operating mode can be configured as required by the user:

- □ **Manual reset protection mode:** Priority is given to the voltage so as to guarantee the PLC logic states and nominal operation of the supplied actuators.
- □ **Automatic reset protection mode:** Priority is given to the current to allow troubleshooting for example, or to help ensure continuity of service until the arrival of the maintenance team.

The Universal range of Phaseo power supplies also has a power reserve, allowing them to deliver a current of 1.5 In at regular intervals. This avoids the need to oversize the power supply if the device has a high inrush current, while ensuring optimum performance of the automation system.

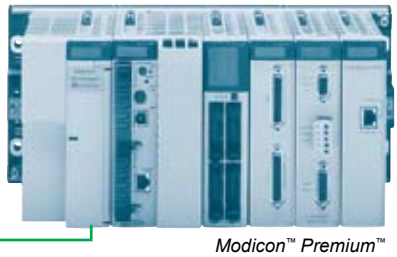
The diagnostics for the Universal range of Phaseo power supplies are available on the front of the device via LEDs (U_{Out} and I_{Out}) and via a dry contact relay.

All products are equipped with an output voltage adjustment potentiometer in order to be able to compensate for any line voltage drops in installations with long connection cable runs.

These power supplies are designed for direct mounting on a 35 mm DIN rail.

Phaseo™ power supplies
Regulated switch mode power supplies
ABL8 Universal range

ABL8WPS24200



Modicon™ Premium™ automation platform

Switch mode power supplies: Universal range *(continued)*

There are four references available in the Universal range of Phaseo™ power supplies for phase-to-neutral or phase-to-phase connection:

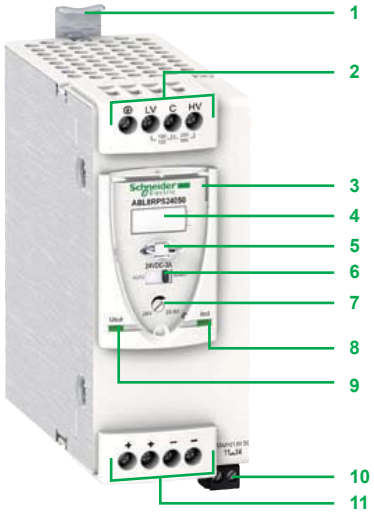
■ **ABL8RPS24030**	72 W	3 A	24 V ⎓
■ **ABL8RPS24050**	120 W	5 A	24 V ⎓
■ **ABL8RPS24100**	240 W	10 A	24 V ⎓
■ **ABL8RPM24200**	480 W	20 A	24 V ⎓

The Universal range of Phaseo power supplies also features two references for three-phase connection:

■ **ABL8WPS24200**	480 W	20 A	24 V ⎓
■ **ABL8WPS24400**	960 W	40 A	24 V ⎓

A range of function modules also allows functions to be added to the Universal range of Phaseo power supplies so as to help ensure continuity of service:

- □ Buffer module or Battery Control modules combined with batteries to help ensure continuity of service in the event of a network power outage
- □ Redundancy module to meet the most demanding requirements for continuity of service even if the power supply fails
- □ Converter modules delivering nominal voltages of 5 and 12 V ⎓ from the 24 V ⎓ output of the Universal range of Phaseo power supplies



Description

Universal range of power supplies

The Universal range of Phaseo regulated switch mode power supplies, **ABL8RPS24●●0/RPM24200/WPS24●00**, is comprised of:

1 Spring clip for 35 mm DIN rail
2 12 AWG (4 mm²) enclosed screw terminals for connection of the AC voltage (single-phase, phase-to-phase or three-phase connection)
3 Protective glass flap
4 Clip-on marker label
5 Locking catch for the glass flap (sealable)
6 Protection mode selector
7 Output voltage adjustment potentiometer
8 Output voltage status LED (green and red) *(1)*
9 Output current status LED (green, red and orange)
10 Screw terminals for connection of the diagnostic relay contact, except **ABL8RPS24030**
11 12 AWG (4 mm²) [8 AWG (10 mm²) on **ABL8WPS24●00** and **ABL8RPM24200**] enclosed screw terminals for connection of the DC output voltage

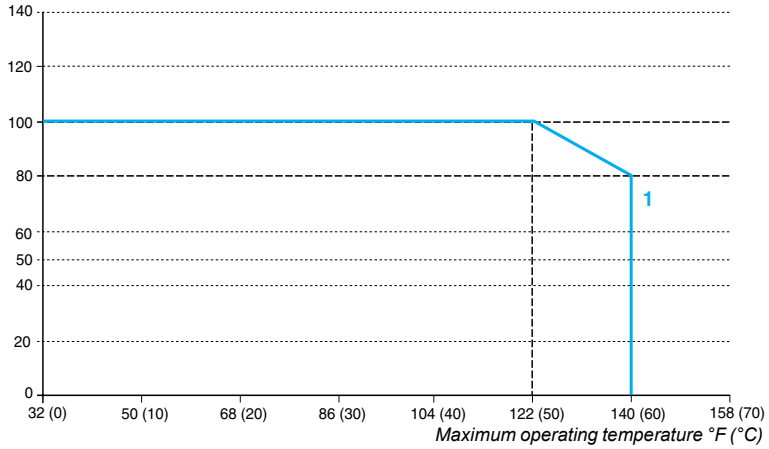
Output specifications

Derating

The ambient temperature is a determining factor which limits the power that an electronic power supply can deliver continuously. Excessively high temperatures around the electronic components significantly reduce their life.

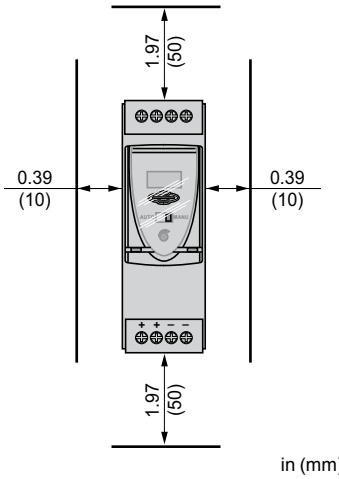
The nominal ambient temperature for the Universal range of Phaseo™ power supplies is 122 °F (50 °C). Above this temperature, derating is necessary up to a maximum temperature of 140 °F (60 °C).

The graph below shows the power as a percentage of the nominal power that the power supply can deliver continuously, depending on the ambient temperature.



1 ABL8RPM, ABL8RPS, ABL8WPS mounted vertically

Derating should be considered in extreme operating conditions:
- Intensive operation (output current permanently close to the nominal current, combined with a high ambient temperature)
- Output voltage set above 24 Vdc (to compensate for line voltage drops, for example)
- Parallel connection to increase the total power



in (mm)

General rules	
Intensive operation	See derating in above graph. Example for ABL8RPS: ■ Without derating, from 32 to 122 °F (0 to 50 °C) ■ Derating of nominal current by 2% per additional °C, up to 60 °C. See chart.
Rise in output voltage	The nominal power is mounted. Increasing the output voltage means that the current delivered must be reduced.
Mounting	To allow heat dissipation, the power supplies must not be in contact with each other.

In all cases, there must be adequate convection around the products to assist cooling. There must be sufficient clearance around the Universal range Phaseo power supplies:
- 1.97 inches (50 mm) above and below
- 0.39 inches (10 mm) on the sides

Output specifications *(continued)*

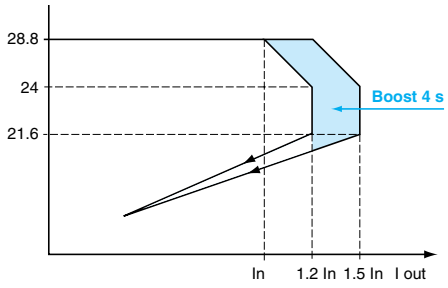
Behavior when overloads occur:

■ Automatic reset protection mode (current limiting): If the output current exceeds approximately 1.2 In, the output current is limited to this value. The value of the output voltage can then be less than 21 V but the diagnostic relay opens, allowing the anomaly to be fed back to the automation system. This prevents feedback of any undefined logic state. On elimination of the overload, the output voltage reverts to its preset value.
■ Manual reset protection mode (undervoltage detection): If the output current exceeds approximately 1.2 In, the power supply stops completely before the output voltage drops below 21 V and no longer delivers any current. The detected fault is stored in memory as long as voltage is present at the power supply primary. After the primary is de-energized for a few seconds, the power supply will become operational again if the cause of the detected fault has been removed.

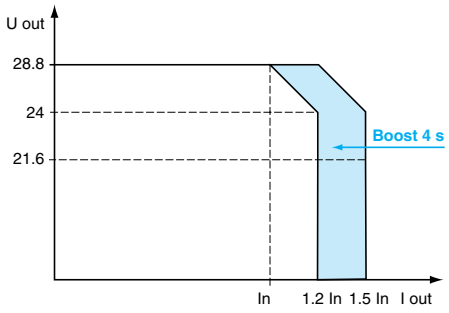
In both these modes, any overload of less than 1.5 In and lasting less than 4 s will be absorbed by the "boost" circuit, and the voltage delivered will stay within the specified limits (adjustment voltage +/- 3%).

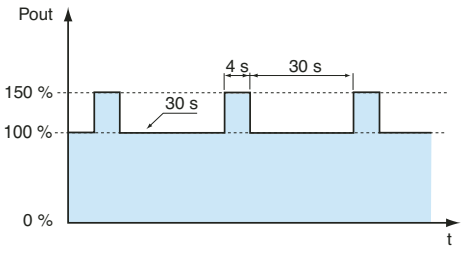
Load limit

Manual reset protection mode
ABL8RPM24200 / ABL8RPS24●●● / ABL8WPS24●●●



Automatic reset protection mode
ABL8RPM24200 / ABL8RPS24●●● / ABL8WPS24●●●





"Boost" repeat accuracy

The **ABL8RPS / RPM / WPS** Universal range of Phaseo™ power supplies has a power reserve, allowing them to supply the application with energy up to 1.5 times the nominal current at the intervals illustrated by the graph to the left.

The "boost" amplitude and repeat accuracy depend on:
■ Overload duration
■ Overload intensity
■ Period between each consumption peak

When the power supply can no longer cope (repeated overloads, overload duration > 4 seconds, power rating > 150% of nominal power) the integrated protection trips.

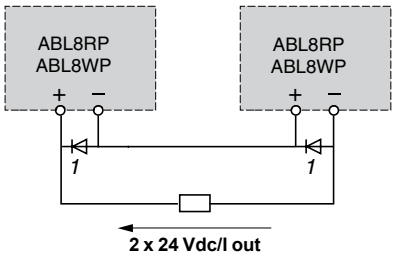
Behavior in the event of phase failure on 3-phase power supplies

The **ABL8WPS24●00** Universal range of Phaseo power supplies are capable of starting and delivering a nominal current and voltage for a few minutes when failure of one phase occurs. Their protection (thermal) then trips and they are reset automatically or manually, depending upon the operator's presetting.

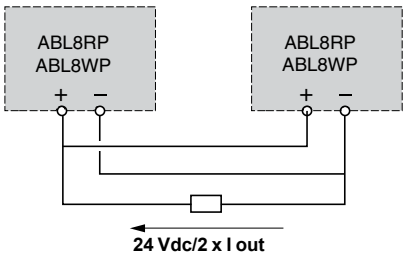
Output specifications *(continued)*

Series or parallel connection

Series connection



Parallel connection



Family	Series	Parallel
ABL8RPS / 8RPM / 8WPS	2 products max.	2 products max.

Note: *Series or parallel connection is only recommended for products with identical catalog numbers. For better availability, the power supplies can also be connected in parallel using the ABL8RED24400 Redundancy module.*

Phaseo™ power supplies

Regulated switch mode power supplies

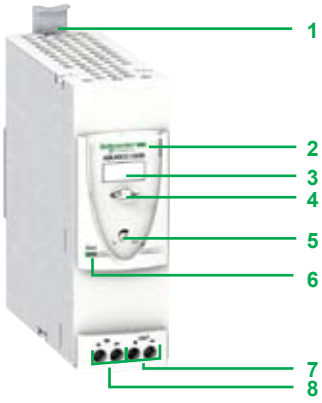
Function modules (for Universal range): DC/DC Converter modules

Supplying 5 V ⎓ and 12 V ⎓ auxiliary voltages

The Phaseo™ range offers modules that convert the 24 V ⎓ voltage to a 5 to 15 V ⎓ voltage.

These modules can be used for savings in the:
- Upstream protection normally used with the 5 to 15 V ⎓ power supply
- Connection to the line supply

There are two references available for this solution:
- **ABL8DCC05060 :** 5 to 6.5 V ⎓, 6 A converter module
- **ABL8DCC12020 :** 7 to 15 V ⎓, 2 A converter module



Description

5 V ⎓ and 12 V ⎓ Converter modules

The **ABL8DCC●●0●0** DC/DC Converter modules include:
1. Spring clip for 35 mm DIN rail
2. Protective glass flap
3. Clip-on marker label
4. Locking catch for the glass flap (sealable)
5. Output voltage adjustment potentiometer
6. Output current status LED (green)
7. 12 AWG (4 mm²) enclosed screw terminals for connection of the 24 V ⎓ input voltage
8. 12 AWG (4 mm²) enclosed screw terminals for connection of the 5 V ⎓ or 12 V ⎓ output voltage

Phaseo™ power supplies
Regulated switch mode power supplies
Function modules (for Universal range): Buffer modules and Battery Control modules

Introduction

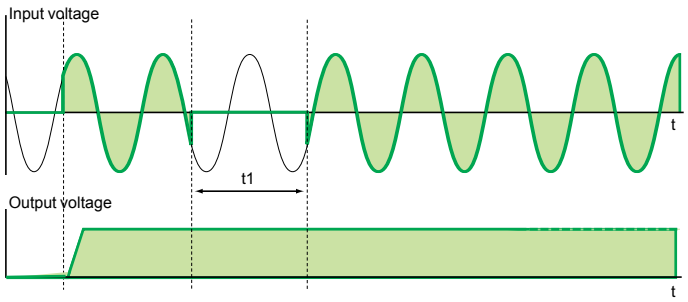
The **ABL8B** Function module offer complements the **ABL8RPS/8RPM/8WPS** regulated switch mode power supply offer, forming a set of solutions to meet the needs for continuity of service in the most demanding applications.

These modules, connected to the electronic switch mode power supply outputs, offer the following solutions:

- Immunity to microbreaks (see below)
- Voltage holding in the event of power outages (see page 40)
- Voltage holding in the event of power supply equipment failure (see page 46)

Continuity of service: Immunity to microbreaks

ABL8RPS/8RPM/8WPS power supplies can deliver their nominal power in the event of a microbreak of less than 20 ms. When outages exceed this value, the **ABL8BUF24400** Buffer Function module, combined with an **ABL8RPS/8RPM/8WPS** power supply, is used. In the event of short interruptions, the Buffer module takes over and continues to provide the 24 V ⎓ voltage.
The table below indicates the maximum time for immunity to microbreaks t1.



Power supply		Typical time for immunity to microbreaks with Buffer module (40 A) at Un t1	
		100% load at the Buffer module output	2 A at the Buffer module output
ABL8RPS24030	Single-phase or 2-phase 3 A, 72 W	0.912 s	0.984 s
ABL8RPS24050	Single-phase or 2-phase 5 A, 120 W	0.472 s	1.33 s

Phaseo™ power supplies

Regulated switch mode power supplies

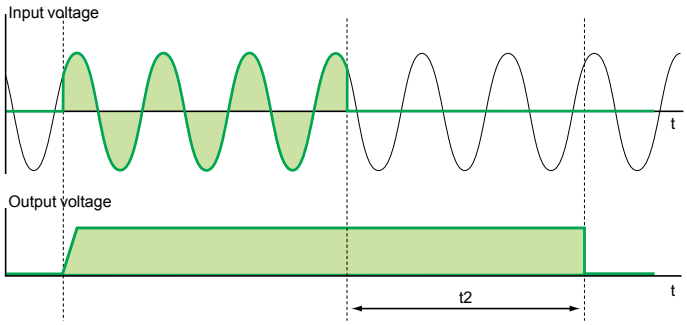
Function modules (for Universal range): Buffer modules and Battery Control modules

Continuity of service: Immunity to microbreaks (continued)

For applications that are sensitive to unintended stopping, the **ABL8B** range of Function modules offers a solution including:

- Electronic switch mode power supply and Buffer module for holding times t2 up to two seconds
- Electronic switch mode power supply, Battery Control module and Battery module for holding times t2 of between two seconds and a few hours

These solutions are used to supply voltage after loss of the line supply, thus enabling saving of current values or fallback of some actuators supplied with 24 V ⎓.
The table below indicates the possible holding times according to the equipment combinations and the current required.



Holding current	Holding time t2																										
	Seconds								Minutes																Hours			
	0.1	0.2	0.5	1	2	5	10	30	1	2	3	4	5	6	7	8	9	10	15	20	30	40	50	1	2	3	5

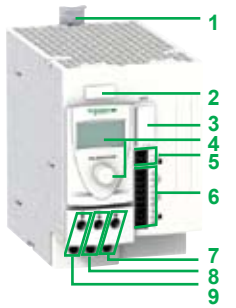
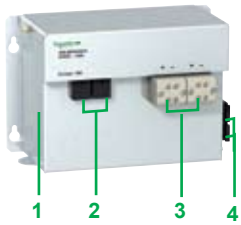
Function modules	Reference	Code
40 A Buffer module	**ABL8BUF24400**	1
20 A Battery Control module	**ABL8BBU24200**	2
40 A Battery Control module	**ABL8BBU24400**	3
3.2 Ah Battery module	**ABL8BPK24A03**	4
7 Ah Battery module	**ABL8BPK24A07**	5
12 Ah Battery module	**ABL8BPK24A12**	6

Note: *Several Buffer modules (up to a maximum of three) can be connected in parallel to increase the immunity time. The times given in the table above (boxes marked 1) should be multiplied by the number of modules used (2 or 3).*

Phaseo™ power supplies
Regulated switch mode power supplies
Function modules (for Universal range): Buffer modules and Battery Control modules





Description

40 A Buffer module

The **ABL8BUF24400** Buffer Function module includes:
1 Spring clip for 35 mm DIN rail
2 Clip-on marker label
3 LED indicator (green): module ready (maximum load)
4 8 AWG (10 mm²) enclosed screw terminals for connection of the 24 V ⎓ input voltage
5 8 AWG (10 mm²) enclosed screw terminals for connection of the 24 V ⎓ output voltage
6 Removable screw terminal block for connection of the diagnostic contact: module ready (maximum load)

20 A and 40 A Battery Control modules

The **ABL8BBU24●00** Battery control Function modules include:
1 Spring clip for 35 mm DIN rail
2 Clip-on marker label
3 Memory card slot for backup and duplication of the configuration parameters
4 Display and configuration parameter browse/selection button
5 Removable screw connector for connection of the battery voltage inhibit input (terminal block supplied)
⚠ This contact must always be volt-free.
6 Removable screw connector for connection of the diagnostic contacts: power supply presence, battery alarm and presence (terminal block supplied)
7 8 AWG (10 mm²) enclosed screw terminals for connection of the 24 V ⎓ output voltage
8 8 AWG (10 mm²) enclosed screw terminals for connection of the power supply 24 V ⎓ input voltage
9 8 AWG (10 mm²) enclosed screw terminals for connection of the battery voltage 24 V ⎓ input voltage

3.2 Ah, 7 Ah, and 12 Ah Battery modules

The front panel of the **ABL8BPK24A●●** Battery Function modules include:
1 Metal box that can be mounted on a vertical or horizontal panel
2 Fuse carrier (one or two depending on the model), which, in addition to protecting the output, can be used to disable the battery module (fuse supplied but not fitted)
3 8 AWG (10 mm²) enclosed screw terminals for connection of the Battery module 24 V ⎓ output voltage (depending on the model, allows two Battery modules to be connected in parallel)
4 Fuse storage attachment

Functions

ABL8BBU24●00 Battery Control modules

The main module functions are:
- Charging and checking the associated battery
- Automatic switching between the power supply and the battery in the event of a power outage
- Diagnostics

The Battery Control modules offer a three-color LCD screen and a navigation button that can be used to:
- Display the status and diagnostic data
- Access the service and maintenance functions
- Set the module parameters

These modules also have a diagnostic relay (C/O contacts) relating to:
- Power supply status
- Battery module status
- Alarm

The following functions are available:
- Inhibition or activation (local or remote) of the battery to help ensure the safety of maintenance operations on the application
- Battery test
- Backup and download of a configuration via a memory card enabling storage and duplication of the configuration parameters so as to eliminate repetitive operations when setting up the Battery Control modules

The module parameters can be set in order to define:
- User language
- Rating of the battery connected to the Battery Control module
- Operating temperature for the battery in order to optimize its life
- Length and cross-section of connection to compensate for voltage losses due to length of line
- Duration of the battery-powered supply
- Threshold voltage provided by the power supply below which the battery takes over

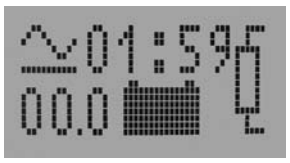
Whichever solution is used, the output terminals for the power supplies, Buffer modules and Battery Control modules have been designed to make it easier to isolate a backed-up circuit and a non-backed-up circuit to help ensure discrimination in continuity of service after a power outage.

ABL8BPK24A●● Battery modules

Each Battery module consists of:
- Lead-sealed batteries (two in series)
- Automotive type fuse protection

Only these modules are compatible with the **ABL8BBU** Battery Control modules.

Green: Nominal status/information



Orange: Warning

Red: Detected fault

Examples of Battery Control module diagnostic screens

⚠ *In the event of the Battery Control module-Battery module combination not being used for long periods (approximately 1 week minimum) the following is recommended:*

- Fully charge the Battery module for at least 72 hours, then
- Remove the fuse(s) from the Battery module(s) and store them in the allocated slots **2**

Phaseo™ power supplies

Regulated switch mode power supplies

Function modules (for Universal range): Redundancy module

Continuity of service: Failure of power supply equipment

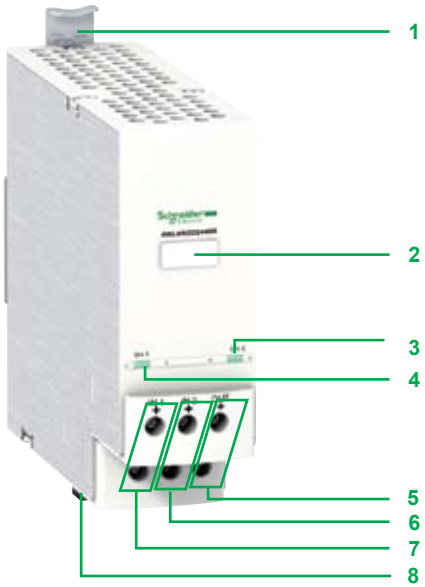
Where continuous operation of the application is the prime concern, it is necessary to help ensure that when one power supply malfunctions, a second power supply takes over. The **ABL8RED24400** Redundancy module can perform this function, ensuring that the failure of one power supply does not disturb the second (for example, in the event of a short-circuit of one of the power supply outputs).

The **ABL8RED24400** Redundancy module, used with two electronic switch mode power supplies of the same type, can be used to supply the nominal power to the application even if one of the power supplies fails.

The various diagnostics - on the front panel (LED) and remote (relay) - inform the maintenance team as soon as the first detected fault occurs on one of the power supplies.

When continuity of service is critical for the application, it may be necessary to provide redundancy for the Redundancy module.

Note: *The Redundancy module can be used to connect two power supplies with a maximum rating of 20 A in parallel. To connect two 40 A* **ABL8WPS24400** *power supplies, two* **ABL8RED24400** *Redundancy modules must be used.*



Description

2 x 20 A Redundancy module

The **ABL8RED24400** Redundancy Function module includes:

1 Spring clip for 35 mm DIN rail
2 Clip-on marker label
3 Input voltage status LED (green) for the first 24 V ⎓ power supply
4 Input voltage status LED (green) for the second 24 V ⎓ power supply
5 8 AWG (10 mm²) enclosed screw terminals for connection of the 24 V ⎓ output voltage
6 8 AWG (10 mm²) enclosed screw terminals for connection of the input voltage for the second 24 V ⎓ power supply (I ⩽ 20 A)
7 8 AWG (10 mm²) enclosed screw terminals for connection of the input voltage for the first 24 V ⎓ power supply (I ⩽ 20 A)
8 Removable screw terminal block for connection of the diagnostic contact: power supply connected to a faulty input

Phaseo™ power supplies
Regulated switch mode power supplies
ABL1 Dedicated range

Introduction

ABL1REM/RPM Phaseo™ Dedicated range regulated switch mode power supplies are specially designed to provide the DC voltage necessary for electrical equipment operating on a safety extra low voltage (SELV). Split into two ranges, they are able to meet all the needs encountered in standard commercial machines.

These single-phase power supplies, with or without anti-harmonic distortion filter, conform to world-wide standards. Switch mode technology provides the quality of the output current with regulation below 3%.

As machine components, **ABL1REM/RPM** Phaseo Dedicated range power supplies are easy to install; only the set-up may vary from one application to another. The ABL1 range has been specially designed for machine manufacturers.

ABL1REM/RPM regulated switch mode power supplies are totally electronic and regulated. They provide the following benefits:

- Wide input voltage range from 85 to 264 V ∿ and 120 to 370 V ⎓ (not indicated on the product).
- Several products with anti-harmonic distortion input filter.
- High degree of output voltage stability, adjustable by potentiometer.
- Built-in thermal overload protection.
- Conformity to world-wide standards.
- Conformity to standard EN 55022 class B.
- UL 508, CSA and TÜV certifications.
- Overload and short-circuit protection.
- Considerably reduced weight.
- Identical mounting accessories for all models.

ABL1 power supplies for electrical equipment are divided into two ranges :

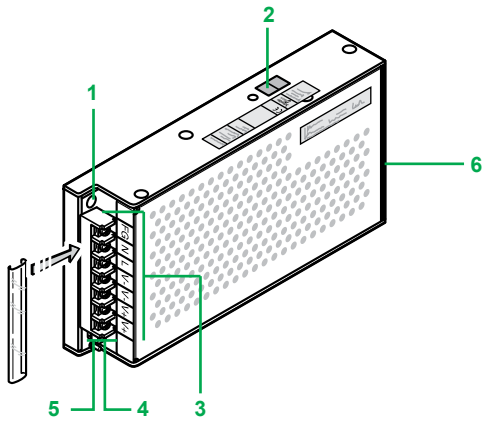
- **ABL1REM**, single-phase:
  - 60 W for the 12 V ⎓ version,
  - 60 W, 100 W, 150 W and 240 W for the 24 V ⎓ versions.
- **ABL1RPM**, single-phase with anti-harmonic distortion filter:
  - 100 W for the 12 V ⎓ version,
  - 100 W, 150 W and 240 W for the 24 V ⎓ versions.

Electromagnetic compatibility

Levels of conducted and radiated emissions are defined in standards EN 55011 and EN 55022.
The products in the ABL1 range are class B, the strictest level, and can be used without any restrictions due to their low emissions.

Behavior in the event of short-circuits

ABL1 power supplies are equipped with electronic and thermal overload protection. This protection resets itself automatically on elimination of the detected fault, which avoids having to take any action or change a fuse.



Description

ABL1REM/RPM regulated switch mode power supplies include:

1 Two mounting holes for M4 x 20 screws.
2 115/230 V input voltage selector (on 150 W and 240 W versions only).
3 12 AWG (4 mm²) screw clamp terminal block for connection of the AC input voltage and DC output voltage.
4 Green LED indicating presence of the DC output voltage.
5 Output voltage adjustment potentiometer (± 10 %).
6 Removable, transparent, clip-on cover.

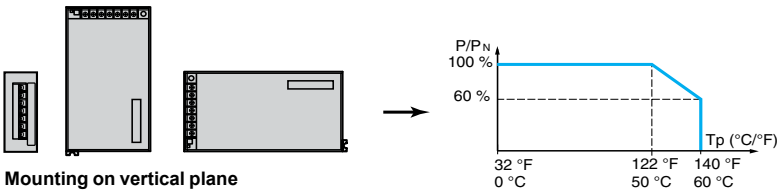
Output specifications

Derating

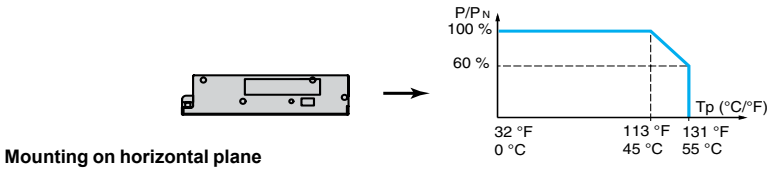
The ambient temperature is a determining factor which limits the power that an electronic power supply can deliver continuously. Excessively high temperatures around the electronic components significantly reduce their life.

ABL1R●M24100 power supplies (240 W) are mechanically ventilated from an ambient temperature > 104 °F (40 °C) approx., or for a load rating > 90% approx. The rated ambient temperature for **ABL1REM/1RPM** power supplies is 122 °F (+50 °C). Above this, derating is necessary up to a maximum temperature of 140 °F (+60 °C).

The curves below show the power (in relation to the nominal power) which the power supply can deliver continuously, according to the ambient temperature.



Mounting on vertical plane



Mounting on horizontal plane

Extreme operating conditions

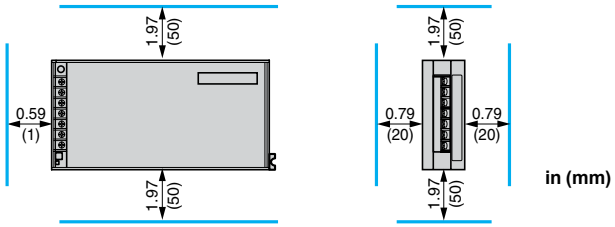
Derating should be considered in extreme operating conditions:
- Intensive operation (output current permanently close to the nominal current, combined with a high ambient temperature)
- Output voltage set above 24 V (to compensate for line voltage drops, for example)
- Parallel connection to increase the total power

General rules to be complied with

Intensive operation	See derating on above curves. Example for ABL1 mounted vertically: ■ Without derating, from 32 to 122 °F (0 to 50 °C) ■ Derating of nominal current by 4%, per additional °C, up to 60 °C
Rise in output voltage	The nominal power is mounted. Increasing the output voltage means that the current delivered will be reduced.
Parallel connection to increase the power	The total power is equal to the sum of the power supplies used, but the maximum ambient temperature for operation is 122 °F (50 °C). To improve heat dissipation, the power supplies must not be in contact with each other.

Note: See page 53 for a schematic drawing of the ABL1 Dedicated Range power supplies.

Output specifications *(continued)*



In all cases, there must be adequate convection around the products to help ensure sufficient cooling. There must be a clear space of 1.97 in (50 mm) above and below the power supplies, and of 0.79 in (20 mm) at the sides.

Phaseo™ power supplies

Regulated switch mode power supplies

ASIABL AS-Interface™ range

Power supplies for AS-Interface™ cabling system

Consistent with the standard Phaseo™ line, the range of **ASIABL** power supplies is designed to deliver a ⎓ voltage, as required by AS-Interface cabling systems. Three versions are available to meet all needs encountered in industrial applications, in enclosures, cells or floor-standing enclosures. These single-phase, electronic, switch mode power supplies guarantee the quality of the output current, in accordance with the electrical specifications and conforming to standard EN 50295.

ASIABLB3002

ASIABLB300●

Operating on a 100 to 240 V ∿ supply, this power supply delivers a voltage of 30 V ⎓. Available in 2.4 and 4.8 A ratings, the outgoing terminal block allows the cable to be connected separately to the AS-Interface interface modules and to the AS-Interface master. Input and output LEDs allow fast and continuous diagnostics.

ASIABLD3004

ASIABLD300●

Operating on a 100 to 240 V ∿ supply, this power supply delivers a voltage of 30 V ⎓. Available in 2.4 and 4.8 A ratings, it allows diagnosis and management of ground detected faults on AS-Interface interface modules. In the event of a ground detected fault, the Phaseo power supply stops dialog on the AS-Interface cabling system and puts the installation in a fallback condition. Restarting is only possible after deliberate acknowledgement of the detected fault. Two inputs/outputs enable dialog with a processing unit. The outgoing terminal block is used to connect the AS-Interface cable separately to the interface modules and master modules. Input, output and ground detected fault LED's allow fast and continuous diagnostics.

ASIABLM3024

ASIABLM3024

Operating on a 100 to 240 V ∿ supply, this product provides two separate power supplies, which are totally independent in the way they operate.
Two output voltages – 30 V/2.4 A (AS-Interface line supply) and 24 V/3 A – are available, making it possible to supply the control equipment without an additional power supply. Input and output LEDs allow fast and continuous diagnostics.

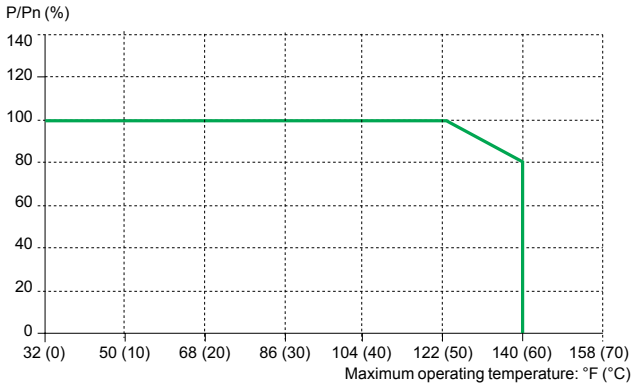
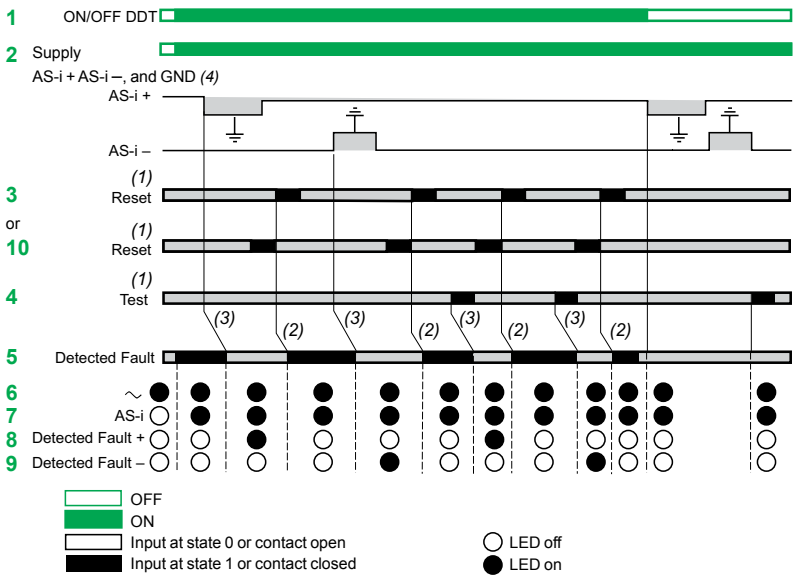
Derating

The ambient temperature is a determining factor which limits the power that an electronic power supply can deliver continuously. If the temperature around the electronic components is too high, their life will be significantly reduced.

The graph below shows the power (in relation to the nominal power) which the power supply can deliver continuously, according to the ambient temperature.



Function diagram



(1) 30 ms min.
(2) 15 ms.
(3) 20 ms.
(4) Warning: the ground fault detector will only operate if the ground (GND) terminal is connected.

⚠ Warning

■ The ground (GND) *(4)* connection must be made. In the event of disconnection, the built-in detector becomes inoperative. To obtain ground connection diagnostics, it is recommended that an **ASIABLD300●** power supply be used with built-in insulation control.

■ An appearence of accidental ground detected fault triggers, in the following cases, the activationg of built-in protection:
□ **case 1**: detected fault between AS-i "+" and ground,
□ **case 2**: detected fault between AS-i "-" and ground,
□ **case 3**: detected fault between sensors/actuators (supplied by ASIABLD300●) and ground.

In cases 1 and 2 with switch 1 ON -> OFF: maintain of detected fault, any exchange between master and slaves.

In case 3 with switch 1 ON -> OFF: restart of exchanges between master and slaves but the states of inputs/outputs of affected module are not guaranted.
