EcoStruxure™
Innovation At Every Level

Schneider Electric's IoT-enabled, plug-and-play, open, secure, interoperable architecture and platform, in Industries, Infrastructures, Data Centers, and Buildings.

Innovation at every level

EcoStruxure is based on a three-tiered technology stack delivering innovation at every level, from connected products to edge control and apps, analytics, and services.

Together with our hybrid segments approach, this enhances your value around safety, reliability, operational efficiency, sustainability, and connectivity across 6 domains of expertise:

- Power
- IT
- Building
- Machine
- Plant
- Grid

Dedicated architectures and IoT

We tailor our solutions in the form of dedicated reference architectures for plants:

- Management systems
- Power systems
- Data center systems
- Industrial plant and machine systems
- Smart grid systems

The Industrial Internet of Things (IIoT) gives an additional boost to technologies. That's why we provide our customers with an IoT-enabled architecture and platform offering simple, reliable, productive, and cost-efficient solutions.

Cybersecurity solutions

Robust cybersecurity protection is a must, and Schneider Electric's solutions can deliver it, regardless of business type or industry.

The vendor-agnostic services provided by our skilled professionals help to protect your entire critical infrastructure. We help to assess your risk, implement cyber-specific solutions, and maintain your onsite defenses over time, while integrating appropriate IT policies and requirements.

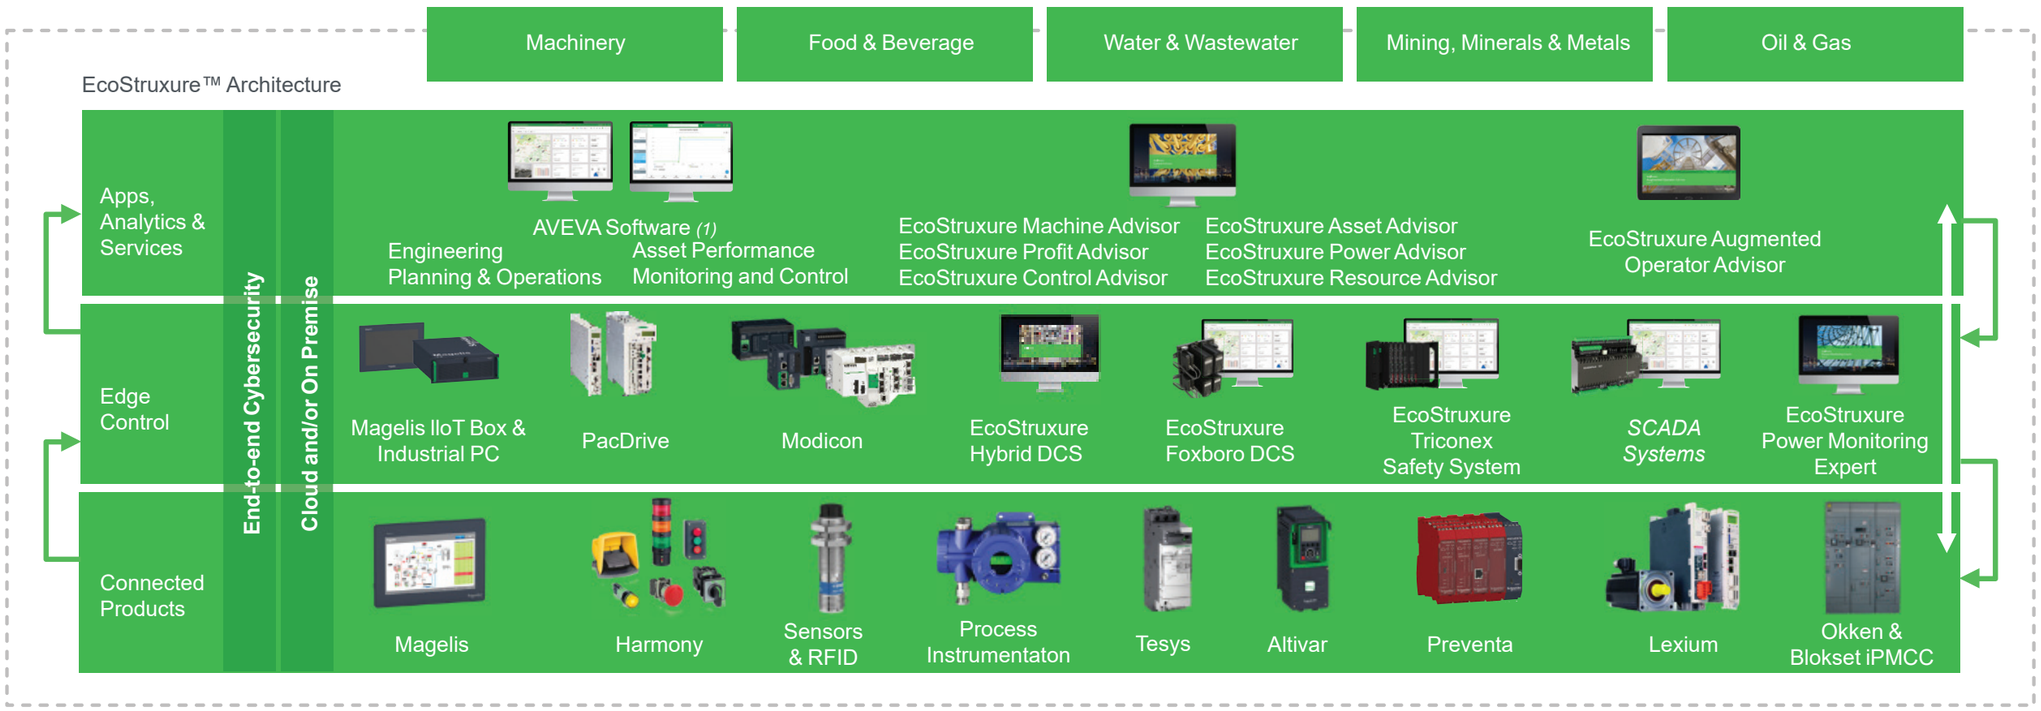
This is our difference and your advantage.

Enhanced safety

With the release of M580 Safety, Schneider Electric further expands the EcoStruxure platform.

This consolidates our position as one of the most trusted industrial safety vendor, with thousands of Modicon and Triconex safety systems protecting the most critical industrial processes globally.

EcoStruxure™ Innovation At Every Level **for Industry**



(1) The Schneider Electric industrial software business and AVEVA have merged to trade as AVEVA Group plc, a UK listed company.

Modicon X80 modules platform
Compact, robust, sustainable

1

Modicon X80 I/O, a new remote I/O system

The Modicon X80 I/O platform serves as a common platform for Modicon M340, Modicon Quantum Ethernet I/O, Modicon M580 PACs, and future Modicon Mx80 controllers. This common platform means that a much smaller stock of spare parts needs to be held, and maintenance and training costs are significantly reduced. A common configuration tool is used for all PAC modules using EcoStruxure Control Expert *(1)* with a high level of services such as bit forcing and structured device DDT. This platform offers a wide choice of Schneider Electric I/O modules (discrete, analog, expert, and communication).

Time-to-market

Common I/O platform for Modicon M340, M580, and Quantum Ethernet I/O

Compact

> The Modicon X80 I/O platform features the latest I/O technology, making it extremely compact.
> It has smaller cabinet dimensions, with up to 64 discrete I/O for some modules.

Modicon X80 I/O platform

Maintenance Excellence

ATEX and IECEx zone 2/22

Robust

> Offering more than required by the standards
> Certified for Hazardous Location Class I Division 2 Groups ABCD and for ATEX/ IECEx zone 2/22 (depending on the model, see pages 8/2 to 8/9)

Characteristics	Modicon X80 I/O platform	IEC standards Values required by
Mechanical constraints	**Levels reached**	**IEC 60068-2**
Shock	30 g	> 15 g
Vibrations	3 g	> 1 g
Electrical immunity	**Levels reached**	**IEC 61131-2**
Radiated field	15 V/m	> 10 V/m
Electrostatic discharges by contact	6 kV	> 4 kV
Environmental immunity	**Working values**	**IEC 61131-2**
Temperature	0…60 °C/*32… 140 °F*	> 5…55 °C/*41… 131 °F*
Modicon X80 ruggedized I/O offer	- 25…70 °C/*32… 158 °F*	> 5…55 °C/*41… 131 °F*
Corrosive environments (coated versions)		**Class Gx, 3C4, Kb, 3S4, 3B2**

Maintenance Excellence

Investment Protection

Sustainable

> Common X80 I/O modules reduce training and maintenance costs
> Hot swappable
> Existing solutions for migrating from legacy I/O to the Modicon X80 I/O platform
> Green Premium Eco Label

(1) EcoStruxure Control Expert software continues the Unity Pro range of software and corresponds to versions ≥ 14 of Unity Pro.

Common I/O platform

Modicon X80 modules platform
Common safety

M580 Safety

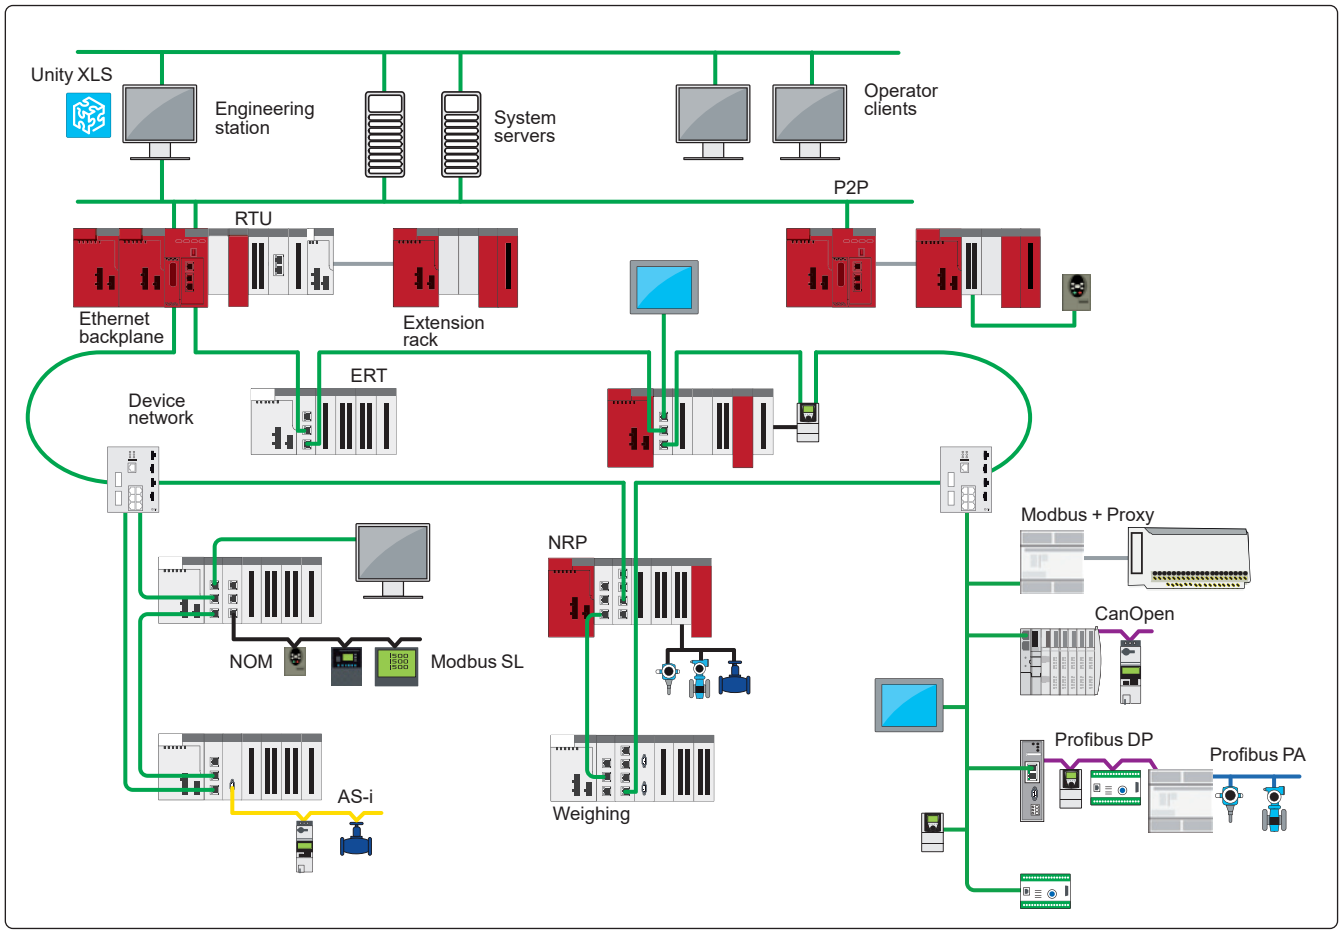
Clear distinction between safety and process

Regulatory requirements

Good practices dictate that control systems must be designed to keep process control functions separate and operationally independent from safety functions. This is usually achieved using a controller for the process and a separate system for safety.

Our solution to combine SAFE and PROCESS management in one application

> Dual processing capability to control safety and process functions independently
> Unifying independent plant safety and process control to help protect the entire operating environment
> Minimized impact of standard process failure on plant safety, its people, and assets
> No need to design, install, and maintain separate safety systems
> Same tools, wiring methods, and I/O structures as Modicon M580 controller



Typical common Safety architecture with Modicon M580 Safety

Combining standard process and safety in a single M580 project

Modicon X80 modules platform
Certifications and standards

Certifications and standards

Depending on the model, Modicon X80 modules comply with the following standards:
- Merchant navy: IACS E10 and agencies: ABS, BV, DNV, GL, LR, RINA, RMRS, and CCS
- International certifications: CE, UL, CSA, RCM, EAC
- Power generation market: IEC 61000-6-5, IEC 61850-3

See pages 8/2 to 8/9 for more information.

Modicon X80 modules platform
Market segments

Market segments

> The EcoStruxure Control Expert *(1)* function block software libraries make the Modicon X80 I/O platform ideally suited for the following market segments:

Water & waste water

Mining, minerals & metals

Consumer Packaged Goods

Oil & gas

(1) Unity Pro software in earlier versions.

Simplified offer from small to large applications

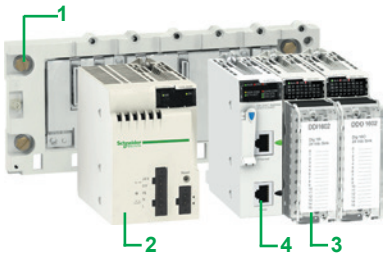
Modicon X80 modules platform
Composition

Modicon X80 I/O platform with Modicon M580 processor

Modicon X80 I/O platform with Modicon M340 processor

Modicon X80 EIO drop with CRA bus terminal module

Ethernet Modbus/TCP DIO drop with PRA module



Presentation

The Modicon X80 I/O platform serves as the common base for automation platforms by simply adding a dedicated processor *(1)*.
It may also:
- form part of a Quantum and Modicon M580 Ethernet I/O architecture as an Ethernet RIO (EIO) drop with a CRA bus terminal module
- form an Ethernet Modbus/TCP DIO drop with a PRA module

The Modicon X80 I/O platform is available in single-rack or multi-rack configuration.

This platform may also accept automation platform-dedicated modules (communication, application-specific, etc.).

One Modicon X80 drop may support two racks separated by a cumulative distance of up to 30 m/*98 ft*.

This platform, common to several automation platforms, can reduce maintenance and training costs as it comprises:
- a single range of spare parts in stock
- training common to several PLCs

Based on the latest I/O technology, the Modicon X80 I/O platform offers:
- high-quality ruggedness and compactness
- compliance with international certifications (ATEX, IEC, etc.)
- a wide selection of modules: discrete or analog I/O, expert modules, communication modules, etc.

This platform is programmed and configured using EcoStruxure Control Expert *(2)* software.

Bit forcing simplifies simulation and structured data simplifies diagnostics.

Description

Modicon X80 I/O platform

The Modicon X80 I/O platform, which can be used in-rack and/or in remote I/O drops (RIO), Ethernet remote I/O drops (EIO), and/or distributed I/O drops (DIO) depending on the type of PLC (M580, M340, Quantum, etc.), comprises the following elements:
1. X-bus racks with 4, 6, 8, or 12 slots or Ethernet + X-bus racks with 4, 8, or 12 slots for single power supply, and Ethernet + X-bus racks with 6 or 10 slots for dual power supply
2. AC or DC power supply modules
3. Discrete and analog I/O modules
4. RTU (remote terminal unit) serial link, AS-Interface, and other communication modules

The additional modules offered include:
- Ethernet (Modbus/TCP, Ethernet/IP) and CANopen master communication and supplementary modules dedicated to several automation platforms such as Modicon M340 or Modicon M580
- Ethernet Global Data module specifically designed to provide the Global Data service for inter-controller communication
- Communication via fiber optic transceiver modules
- Application-specific modules: counter, motion control, SSI encoder, time-stamping, frequency input
- TPP (Technology Partner Program) partner modules: weighing, Wi-Fi

Treatment for harsh environments

With “ruggedized” modules, the Modicon X80 I/O platform may be used in harsh environments or within a range of operating temperatures from -25 to +70 °C/*-13 to +158 °F (see page 6/2).*

(1) See the compatibility guide on page 1/8.
(2) EcoStruxure Control Expert software continues the Unity Pro range of software and corresponds to versions ≥ 14 of Unity Pro.

Modicon X80 modules platform
Architectures, software configuration

Multi-rack configuration with M340 processor

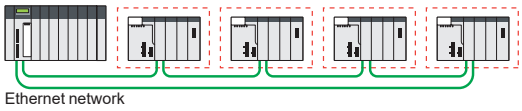
Multi-rack configuration with M580 processor

Architectures based on the Modicon X80 I/O platform

Single-rack or multi-rack local I/O configuration with Modicon M580 or M340 processor

This configuration comprises:
- a Modicon X80 I/O primary rack with a Modicon M580 or M340 processor
- a Modicon X80 I/O secondary rack

This configuration may comprise 4 racks with **BMXP342●●●** processors separated by a maximum cumulative distance of 30 m/*98 ft*. It can comprise up to 7 racks with M580 processors.



Quantum Ethernet I/O with Modicon X80 EIO drop

Quantum Ethernet I/O with Modicon X80 EIO drop

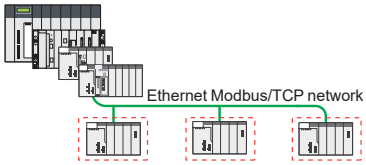
This architecture comprises:
- a Quantum Ethernet I/O platform comprising a processor and a CRP Ethernet head adapter
- one or more Modicon X80 EIO drops with a standard or performance CRA drop adapter

This configuration may include:
- 16 drops with **140CPU6●1●●** processors
- 31 drops with **140CPU6●2●●/140CPU6●8●●** processors

Modicon M580 platform with Modicon X80 EIO drop

Modicon M580 with Modicon X80 EIO drop

This architecture comprises:
- a Modicon M580 automation platform comprising a processor and dedicated modules
- one or more Modicon X80 EIO drops with a standard or performance BMXCRA drop adapter on an X-bus rack or
- one or more Modicon X80 EIO drops with a BMECRA drop adapter on an Ethernet + X-bus rack



Ethernet Modbus/TCP DIO drop connected to an automation system platform

Ethernet Modbus/TCP DIO drop connected to an automation system platform

This architecture comprises:
- a Quantum/Premium/M580/M340 automation platform
- one or more Ethernet Modbus/TCP DIO drops with a **BMXPRA0100** peripheral remote I/O adapter, a power supply, and I/O

Software configuration

EcoStruxure Control Expert

EcoStruxure Control Expert *(1)* programming software is required to set up the Modicon X80 I/O platform.

The EcoStruxure Control Expert *(1)* function block software libraries make it possible to meet the needs of specialist applications in various fields of application such as:
- Water and Waste Water (WWW)
- Consumer Packaged Goods (CPG)
- Mining, Minerals, Metals (MMM)
- Oil & Gas (O&G)

(1) Unity Pro software in earlier versions.

Modicon X80 modules platform
Single-rack configuration

Presentation

The Modicon X80 I/O platform is compatible with two types of backplanes: dual Ethernet and X-bus backplanes or X-bus backplanes *(1)*. One Ethernet switch is embedded inside the backplane with connectivity to some slots on the backplane, and not all slots have Ethernet connectivity.
X-bus functionality is preserved and conforms to the legacy implementation and specification. The X-bus will be used in a subset of modules on the Ethernet backplane.
The backplanes provide the power supply for the modules in the rack.

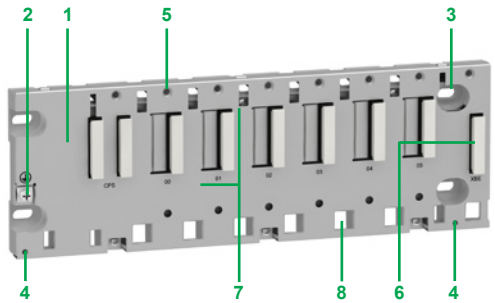
BMXXBP●●00 racks are basic elements in Modicon X80 I/O platform single-rack and multi-rack configurations. They assign a rack number to X-bus slots. They also perform the following functions:
- Mechanical function: They are used to install modules in a PLC station (power supply, processor, discrete, analog, and application-specific I/O). These racks can be mounted on a panel, plate, or DIN rail:
  - Inside enclosures
  - On machine frames, etc.
- Electrical function: The racks incorporate X-bus (proprietary bus). They are used to:
  - Distribute the power supplies required for each module in the same rack
  - Distribute data and service signals for the entire PLC station
  - Hot swap modules during operation

BMEXBP●●00 racks provide the following services to X-bus slots:
- Supply a rack number
- Supply the interconnection for the slots in the main and extended backplanes

BMEXBP●●02 are dual power supply racks with two CPS slots for two redundant power supplies. They:
- Are only compatible with redundant power supplies
- Ensure security of power supply in high-availability applications

The Ethernet interface is the main communication medium in the Ethernet backplane. The Ethernet modules on the Ethernet backplane are attached to one of several ports. The modules connect to the Ethernet switch chip embedded in the Ethernet backplane.

The Ethernet backplane provides the following services to ETH slots:
- ETH connection to ETH slots
- Point-to-point connection



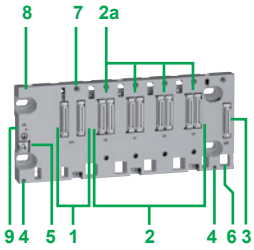
BMXXBP0600 rack with 6 slots

Description

X-bus backplanes

BMXXBP●●00 racks are available in 4, 6, 8, or 12-slot versions and comprise:
1. A metal frame that performs the following functions:
   - Holds the X-bus electronic card and helps it withstand EMI and ESD type interference
   - Holds the modules
   - Gives the rack mechanical rigidity
2. A ground terminal for grounding the rack
3. 4 holes (big enough for M6 screws) for mounting the rack on a frame
4. 2 fixing points for the shielding connection bar
5. Tapped holes to take the locking screw on each module
6. A connector for a rack expansion module, marked **XBE**
7. 40-way female ½ DIN connectors forming the electrical connection between the rack and each module, marked **CPS**, **00**…**11** (the rack is delivered with each connector protected by a cover, which needs to be removed before inserting the module)
8. Slots for anchoring the module pins

(1) Mandatory PV02 version or later.



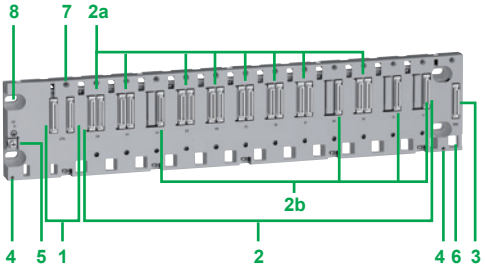
BMEXBP0400 backplane

Description (continued)

Dual Ethernet and X-bus backplanes

The number of X-bus and Ethernet slots found on a backplane depends on the backplane size.

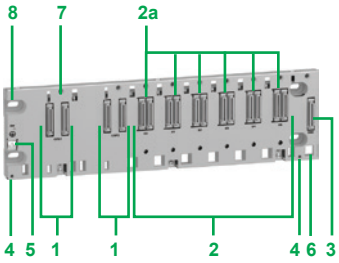
BMEXBP0400/BMEXBP0800 are 4/8-slot dual Ethernet and X-bus backplanes with:
1 CPS slot for power supply
2 4 slots (**BMEXBP0400**)/8 slots (**BMEXBP0800**) with:
2a 4/8 Ethernet and X-bus connectors for mixed modules
3 Extension: 1 connector for a X-bus backplane expansion
4 2 fixing points for the shielding connection bar
5 Protective ground screw
6 Slots for anchoring the module pin
7 Tapped holes for the locking screw on each module
8 4 holes for M4, M5, M6, or UNC #6-32 screws (4.32 mm to 6.35 mm/*0.17 to 0.25 in.*)
9 Rack fastened to 35 mm/*1.38 in.* wide and 15 mm/*0.59 in.* deep DIN rails. Mounting on a 35 mm/*1.38 in.* wide and 7.5 mm/*0.295 in.* deep DIN rail is also possible (in this case, the product withstands less mechanical stress).



BMEXBP1200 backplane

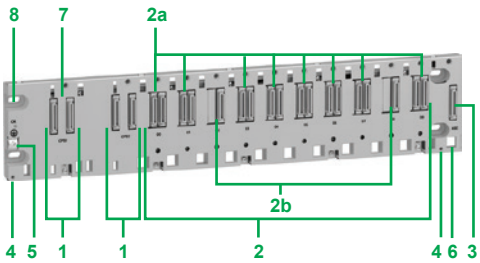
BMEXBP1200 is a 12-slot dual Ethernet and X-bus backplane with:
1 CPS slot for power supply
2 12 slots with:
2a 8 Ethernet and X-bus connectors for mixed modules
2b 4 X-bus connectors for X-bus modules
3 Extension: 1 connector for an X-bus backplane expansion
4 2 fixing points for the shielding connection bar
5 Protective ground screw
6 Slots for anchoring the module pin
7 Tapped holes for the locking screw on each module
8 4 holes for M4, M5, M6, or UNC #6-32 screws (4.32 mm to 6.35 mm/*0.17 to 0.25 in.*)

Dual power supply backplanes



BMEXBP0602 backplane

BMEXBP0602 is a 6-slot dual Ethernet and X-bus backplane with:
1 2 CPS slots for **BMXCPS4002●** redundant power supply only
2 6 slots with:
2a 6 Ethernet and X-bus connectors for mixed modules
3 Extension: 1 connector for an X-bus backplane expansion
4 2 fixing points for the shielding connection bar
5 Protective ground screw
6 Slots for anchoring the module pin
7 Tapped holes for the locking screw on each module
8 4 holes for M4, M5, M6, or UNC #6-32 screws (4.32 to 6.35 mm/*0.17 to 0.25 in.*)
9 Rack is fastened to 35 mm/*1.38 in.* wide and 15 mm/*0.59 in.* deep DIN rails. Mounting on a 35 mm/*1.38 in.* wide and 7.5 mm/*0.295 in.* deep DIN rail is also possible (in this case, the product withstands less mechanical stress).



BMEXBP1002 backplane

BMEXBP1002 is a 10-slot dual Ethernet and X-bus backplane with:
1 2 CPS slots for **BMXCPS4002●** redundant power supply only
2 10 slots with:
2a 8 Ethernet and X-bus connectors for mixed modules
2b 2 X-bus connectors for X-bus modules
3 Extension: 1 connector for an X-bus backplane expansion
4 2 fixing points for the shielding connection bar
5 Protective ground screw
6 Slots for anchoring the module pin
7 Tapped holes for the locking screw on each module
8 4 holes for M4, M5, M6, or UNC #6-32 screws (4.32 to 6.35 mm/*0.17 to 0.25 in.*)

10-slot (8 Ethernet + X-bus/2 X-bus) dual power supply backplane		8	10	3.9 W	**BMEXBP1002**	1.377/ *3.036*

(1) Number of slots taking the processor module, I/O modules, communication modules, and application-specific modules (excluding power supply module).

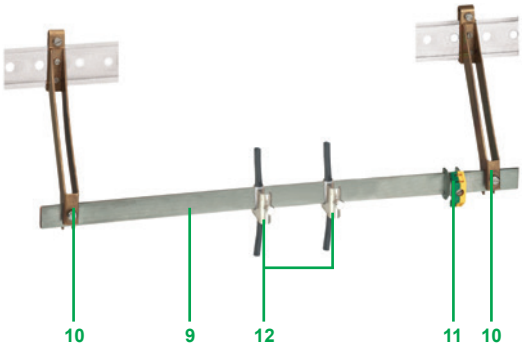
(2) Power consumption of anti-condensation resistor(s).

(3) In an M580 architecture, Ethernet backplanes can be used for RIO drop Ethernet (EIO) but not as expansion racks anywhere. For expansion racks, it is necessary to use BMXXBP0400/0600/0800/1200 racks.

(4) For multi-rack configuration, see *page 2/6.*

(5) Number of slots for maximum number of modules excluding power supply rack expansion modules.

(6) Power consumption of anti-condensation resistor(s).



BMXXSP●●00 cable shielding connection kit

Description

Dual Ethernet and X-bus backplanes

To be ordered separately:
A **BMXXSP●●00** cable shielding connection kit, used to help protect against electrostatic discharge when connecting the shielding on cordsets for connecting:
- Analog, counter, and motion control modules
- A Magelis XBT operator interface to the processor (via **BMXXCAUSBH0●●** shielded USB cable)

The **BMXXSP●●00** shielding system comprises:
9 A metal bar that takes the clamping rings and the grounding terminal
10 Two sub-bases to be mounted on the rack
11 A grounding terminal (not included)
12 Not included in the shielding connection kit, the **STBXSP30●0** clamping rings (sold in lots of 10, cross-section 1.5…6 mm²/*16...10 AWG* or 5…11 mm²/*10...7 AWG*)

STBXSP3000 + STBXSP30●0

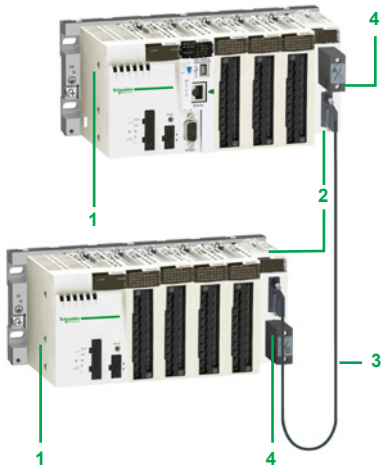
(1) The grounding terminal is not included in the shielding connection kits.

Modicon X80 modules platform
Multi-rack configuration



Modicon M340 + expansion rack

Modicon M580 + expansion rack

Modicon X80 drop + expansion rack

Composition of a multi-rack configuration

Multi-rack configurations are made up of **BM●XBP●●00** racks *(1)*. They comprise:
- 2 racks maximum for a station with a **BMXP341000** processor
- 4 racks maximum for a station with a **BMXP3420●●●** or **BMXP3420●●●CL** processor
- 4 racks maximum for a station with a **BMEP581020** or **BMEP5820●0** processor
- 8 racks maximum for a station with a **BMEP5830●0**, **BMEP5840●0**, **BMEP585040**, or **BMEP586040** processor

Each rack is equipped with:

1 A **BMXCPS●●●●●** power supply or two **BMXCPS4002** redundant power supplies *(2)*

2 A **BMXXBE1000** rack expansion module. This module, inserted in the right-hand end of the rack (**XBE** slot, see page 2/2) does not occupy rack slots **00**…**11** (4, 6, 8, or 12 slots are still available).

3 The **BMXXBE1000** rack expansion modules, which are connected to each other by X-bus cordsets

X-bus

The racks, distributed on the X-bus, are connected to each other by X-bus extension cordsets **3** with a maximum total length of 30 m/*98.42 ft*.

The racks are connected in a daisy chain using **BMXXBC●●0K** *(3)* X-bus extension cordsets connected to the two 9-way SUB-D connectors **7** and **8** on the front panels of the **BMXXBE1000** rack expansion modules **2**.

Line terminators 4

Both expansion modules at the ends of the daisy chain must have a line terminator **4** **TSXTLYEX** on the unused 9-way SUB-D connector.

Note: *The processor module is always positioned in the rack at address 0. However, in an X-bus daisy chain, the order of the racks has no effect on operation. For example, the order of the daisy chain can be 0-1-2-3, 2-0-3-1, or 3-1-2-0, etc.*

Composition of an expansion backplane configuration

The Modicon M580 standalone processor supports 4 to 8 local racks (depending on the CPU performance level), using existing X80 I/O modules and accessories. The Modicon M580 CPU can be installed in the first rack (0) and this can be a dual bus rack. The M580 PLC will support up to 7 **BMXXBP●●●●** PV02 or later backplanes (racks) of 4, 6, 8, or 12 slots. The main backplane (rack 0) will support the CPU.

To extend the configuration using additional racks, users can use a bus extender module (**BMXXBE1000**) and X-bus cables. The backplane extender should be plugged into the dedicated connector on the right side of the backplane. It does not occupy any module slot. The XBE extender module is not hot-swappable, like the rest of the X80 I/O platform. Each backplane has to include a power supply module and will support up to 12 modules.

An expansion rack can be connected to the main backplane and the X80 drop (EIO).

The rack address is assigned as follows:
- Each rack will be assigned a physical address using 4 microswitches located in the bus extender module.
- The main rack containing the CPU will be assigned address 0.
- The other racks will be assigned addresses 1 to 7.

Each rack is equipped with:

1 A **BMXCPS●●●●●** power supply or two **BMXCPS4002** redundant power supplies *(2)*

2 A **BMXXBE1000** rack expansion module. This module, inserted in the right-hand end of the rack (XBE slot) does not occupy rack slots 00…11 (4, 6, 8, or 12 slots are still available).

3 The **BMXXBE1000** rack expansion modules, which are connected to each other by X-bus cordsets

4 Line terminators: Both expansion modules at the ends of the daisy chain must have a line terminator **4** **TSXTLYEX** on the unused 9-way SUB-D connector.

(1) ***BMEXBP●●●●*** *is only supported on M580 processor based platforms.*

(2) ***BMXCPS4002*** *redundant power supply is only compatible only with the* ***BMEXBP0602*** *and* ***BMEXBP1002*** *dual power supply backplane.*

(3) ***BMXXBC●●0K*** *extension cordsets, length 0.8 m/2.62 ft, 1.5 m/4.92 ft, 3 m/9.84 ft, 5 m/16.4 ft, or 12 m/39.4 ft, with angled connectors or* ***TSXCBY●08K*** *extension cordsets, length 1 m/3.28 ft, 3 m/9.84 ft, 5 m/16.4 ft, 12 m/39.4 ft, 18 m/59 ft, or 28 m/92 ft, with straight connectors.*

Compatibility: page 1/8 | I/O modules: page 3/2 | Communication: page 5/8 | Ruggedized modules: page 6/2

Ethernet racks

Modicon M580 CPUs support dual bus backplanes (Ethernet and X-bus), as well as Ethernet ring or star architectures on their Ethernet port.

BME●58●●2● CPUs support Ethernet star or ring architectures (RSTP loop is supported on ports 2 and 3). The embedded scanner allows scanning of distributed equipment. The CPU directly drives these devices (“NOC” embedded function).

BME●58●●4● CPUs support an embedded scanner that allows scanning of X80 drops on Ethernet RIO (EIO) and distributed equipment.

Modicon M580 CPUs have an additional third Ethernet port dedicated to the connection of a service tool such as a PC, HMI, or network analyzer. This port is labeled “ETH 1”. It does not support RSTP.
Modicon M580 CPUs can communicate on the main Ethernet backplane. They cannot be installed in an expansion rack.
It is necessary to use an Ethernet backplane:

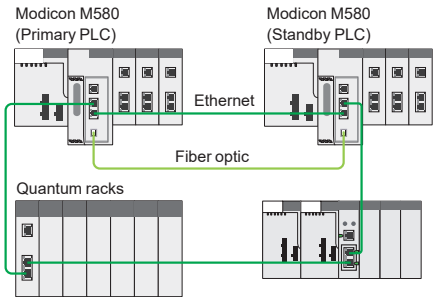
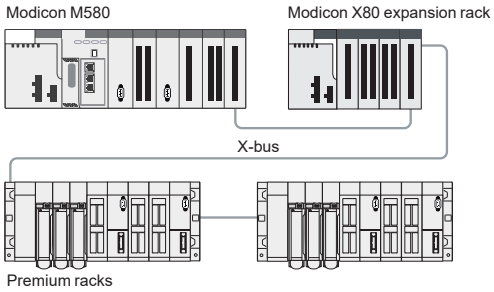
Multi-rack configuration



Quantum Ethernet I/O migration



Premium X-bus expansion example

Quantum Ethernet I/O migration

Modicon M580 CPUs levels 4 and above (**BMEP584040, BMEP585040,** and **BMEP586040**) support Quantum I/O using the Quantum Ethernet remote drop adapter **140CRA31200**. The number of Remote I/O drops allowed (up to 31) depends on the M580 processor model.
The Quantum Ethernet drop is configured using EcoStruxure Control Expert *(1)* software. Each Quantum I/O can be configured with the X80 I/O model (Device DDT) or the Quantum model (“State ram” :%I, %IW, %M, %MW) to simplify the reuse of legacy applications.
The compatibilities of Quantum I/O in an Ethernet Quantum drop are identical in a Quantum processor based architecture. See page 1/8 for more information.
In addition, the Modicon LL984 legacy language is supported by some CPU models; please refer to the M580 product catalog for more information.

Premium X-bus extension: making migration as simple as possible

The Modicon M580 CPU supports revamping of an existing Premium installation by replacing the Premium rack 0 (CPU and communication modules) with an M580 rack. It is also possible to combine Premium racks **TSXRKY4EX/6EX/8EX/12EX** with X80 I/O based on an X-bus rack. The majority of existing configurations are supported. The number of expanded racks allowed depends on which CPU is being used:

- The **BMEP581020**, **BMEP582020**, and **BMEP582040** CPUs support a main local rack and up to 3 expansion racks. If you are using 4, 6, or 8-slot Premium expansion racks, you can install 2 physical racks at each assigned rack address, allowing up to 6 Premium expansion racks (up to 6 backplanes and 100 m*/328 ft* between 2 drops).
- The **BMEP583020**, **BMEP583040**, **BMEP584020**, and **BMEP584040** CPUs support a main local rack with up to 7 expansion racks. If you are using 4, 6, or 8-slot Premium expansion racks, you can install 2 physical racks at each assigned rack address, allowing up to 14 Premium expansion racks.

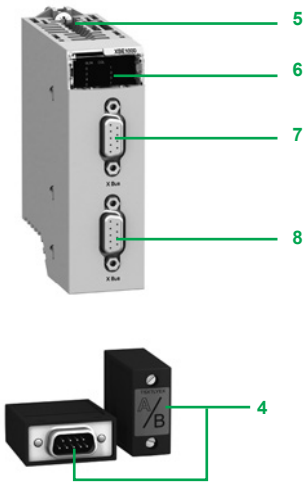
The maximum number of supported X-bus drops is as follows:

- 4 for **BMEP581●●●/2●●●**
- 8 for **BMEP583●●●/4●●●**

The maximum number of X-bus drops is calculated as follows:

- Max number = 1 (CPU rack: **BMXXBP●●00** or **BMEXBP●●00**) + ½ the number of **TSXRKY4/6/8EX** racks + the number of **TSXRKY12EX** racks + the number of **BMXXBP●●00** racks

Description



The front panel of the **BMXXBE1000** rack expansion module comprises:

5 A screw for locking the module in its slot (at the far right-hand end of the rack)
6 A display block with 5 LEDs:
- RUN LED (green): Module running
- COL LED (red): Several racks have the same address, or rack address 0 does not contain the **BMXP34●●●0** or **BMXP58●0●●0** processor module
- LEDs 0, 1, 2, and 3 (green): rack address 0, 1, 2, or 3

7 A 9-way female SUB-D connector, marked X-bus, for the incoming X-bus cordset **3** connected to the upstream rack, or if it is the first rack, for the **A/** line terminator included in the **TSXTLYEX 4** pack
8 A 9-way female SUB-D connector, marked X-bus, for the outgoing X-bus cordset **3** to the downstream rack, or if it is the last rack, for the **/B** line terminator included in the **TSXTLYEX 4** pack

On the right-hand side panel
A flap for accessing the 3 rack addressing microswitches: 0…3

Installation rules for BM●XBP●●●0 racks
Rules for installing racks in enclosures (see our website www.schneider-electric.com).

Modicon X80 modules platform
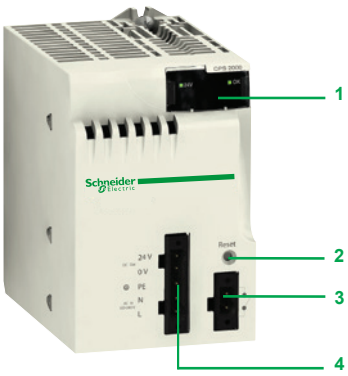
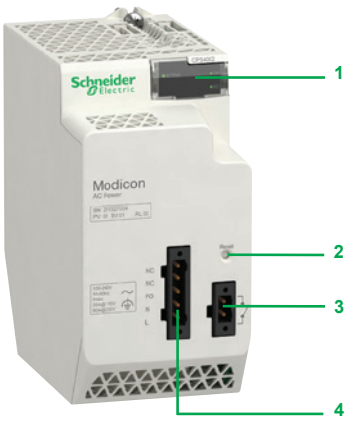
Power supply modules



BMXCPS2000



BMXCPS4002

Presentation

BMXCPS●●●● power supply modules provide the power supply for each **BMEXBP●●00** or **BMXXBP●●00** Modicon X80 I/O rack and the modules installed on it (**BMEXBP●●02** supports **BMXCPS●●●2** modules only).

The Modicon X80 I/O power supply module offer comprises:
- ■ Five power supply modules for DC line supplies:
  - □ 24 V ⎓, 17 W isolated power supply module, **BMXCPS2010**
  - □ 24...48 V ⎓, 32 W isolated power supply module, **BMXCPS3020**
  - □ 24...48 V ⎓, 40 W redundant power supply module, **BMXCPS4022**
  - □ 125 V ⎓, 36 W power supply module, **BMXCPS3540T** (extended operating temperature -25 to +70 °C/*-13 to +158 °F*)
  - □ 125 V ⎓, 40 redundant power supply module, **BMXCPS3522**
- ■ Three power supply modules for AC line supplies:
  - □ 100...240 V ∿, 20 W power supply module, **BMXCPS2000**
  - □ 100...240 V ∿, 36 W power supply module, **BMXCPS3500**
  - □ 100...240 V ∿, 40 W redundant power supply module, **BMXCPS4002**

Description

The power supply module is selected according to:
- ■ The electrical line supply: 24 V ⎓, 48 V ⎓, 125 V ⎓, or 100...240 V ∿
- ■ The required power (see the power consumption table available on our website www.schneider-electric.com) *(1)*

BMXCPS●●●● power supply modules have the following on the front panel:

1 A display block comprising:
- □ OK LED (green), lit if rack voltages are present and correct
- □ 24 V LED (green), lit when the sensor voltage is present (BMXCPS2000/3500/3540T power supply modules only)
- □ RD LED (green), lit when all the internal power supply modules are functioning normally (BMXCPS4002/BMXCPS4022/BMXCPS3522 redundant power supply modules only)
- □ ACT LED (green), lit when the power supply is the Master power supply, off when it acts as a slave supply in redundant application (BMXCPS4002/BMXCPS4022/BMXCPS3522 redundant power supply modules only)

2 A pencil-point RESET pushbutton for a cold restart of the application

3 A 2-way connector that can take a removable terminal block (caged or spring-type) for connecting the alarm relay

4 A 5-way connector that can take a removable terminal block (caged or spring-type) for connecting the following:
- □ ⎓ or ∿ line supply
- □ Protective ground
- □ Dedicated 24 V ⎓ power supply for the input sensors (for BMXCPS2000/3500/3540T power supply modules only)

Included with each power supply module:
- ■ Set of two caged removable terminal blocks (5-way and 2-way) **BMXXTSCPS10**

To be ordered separately (if necessary)**:**
- ■ Set of two spring-type removable terminal blocks (5-way and 2-way) **BMXXTSCPS20**

Compatibility of the power supply with the rack

The redundant AC power supply can be used alone in a single power supply rack or as a pair in a dual power supply rack. For high-availability applications, two independent redundant power supplies can be used to increase the security of power supply. In case the master power supply fails to provide the total current, the slave power supply will change to master mode and continue to function.

Type	Standalone power supply (BMXCPS●●●0)	Redundant power supply (BMXCPS●●●2)
Single power supply racks (BMXXBP●●00, BMEXBP●●00)		
Dual power supply racks (BMEXBP●●02)		

Compatible

Incompatible

(1) This power consumption calculation for the rack can also be performed by EcoStruxure Control Expert V14 (Unity Pro in earlier versions) programming software.

Compatibility: page 1/8 | I/O modules: page 3/2 | Communication: page 5/8 | Ruggedized modules: page 6/2

Modicon X80 modules platform
Power supply modules

BMXCPS2010/3020

BMXCPS2000/3500

BMXCPS4002

BMXCPS4022

BMXCPS3522

Functions

Alarm relay

The alarm relay incorporated in each power supply module has a volt-free contact accessible on the front panel, on the 2-way connector.
The operating principle is as follows:
In normal operation, with the PLC in RUN, the alarm relay is energized and its contact is closed (state 1).
The relay de-energizes and its associated contact opens (state 0) whenever the application stops, even partially, due to any of the following:
- Detection of a blocking fault
- Incorrect rack output voltages
- Loss of supply voltage

RESET pushbutton

The power supply module in each rack has a RESET button on the front panel which, when pressed, triggers an initialization sequence on the processor and the modules in the rack it supplies.
Pressing this pushbutton triggers a sequence of service signals, which is the same as that for:
- A power break, when the pushbutton is pressed
- A power-up, when the pushbutton is released

In terms of the application, these operations represent a cold start (forcing the I/O modules to state 0 and initializing the processor).

Sensor power supply

BMXCPS2000/3500 AC power supply modules and **BMXCPS3540T** DC power supply modules have an integrated 24 V ⎓ supply for powering the input sensors.
Connection to this 24 V ⎓ sensor power supply is via the 5-way connector on the front panel. The available power depends on the power supply module (0.45 A or 0.9 A).

References

Each **BMEXBP●●00** or **BMXXBP●●00** rack must be equipped with a power supply module. **BMEXBP●●02** must be equipped with 1 or 2 redundant power supply modules. These modules are inserted in the leftmost power supply slots of each rack (marked CPS).
The power required to supply each rack depends on the type and number of modules installed in the rack. It is therefore necessary to draw up a power consumption table for each rack in order to determine which **BMXCPS●●●●** power supply module is the most suitable for each rack (please consult our website www.schneider-electric.com).

Separate parts

Description	Type	Composition	Reference	Weight kg/*lb*
Set of 2 removable connectors	Spring-type	One 5-way terminal block and one 2-way terminal block	BMXXTSCPS20	0.015/ *0.033*
	Caged	One 5-way terminal block and one 2-way terminal block	BMXXTSCPS10	0.020/ *0.044*

*(1) Include a set of 2 caged removable connectors. Spring-type connectors available separately under reference **BMXXTSCPS20**.*
(2) The sum of the power consumed on each voltage (3.3 V ⎓ and 24 V ⎓) must not exceed the total power of the module. See the power consumption table available on our website www.schneider-electric.com.
(3) 3.3 V ⎓ and 24 V ⎓ rack voltages for powering modules in the Modicon X80 I/O rack.
(4) 24 V ⎓ sensor voltage for powering the input sensors (voltage available via the 2-way removable connector on the front panel).
(5) Extended operating temperature -25 to +70 °C/-13 to +158 °F (with power derating at extreme temperatures: 27 W between -25 and 0 °C/-13 and 0 °F and between 60 and 70 °C/140 and 158 °F).

Modicon X80 modules platform
Discrete I/O modules

Presentation

Discrete I/O modules in the Modicon X80 I/O offer are standard modules occupying a single slot on the rack. These modules are equipped with either of the following:
- A connector for a screw or spring-type 20-way removable terminal block
- One or two 40-way connectors

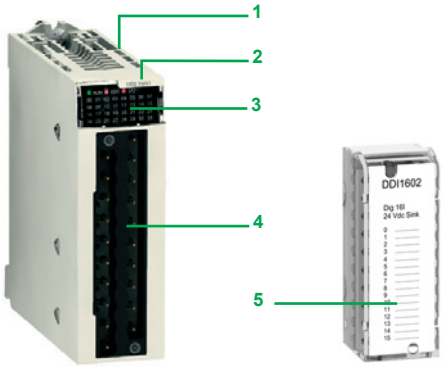
This wide range of discrete I/O can be used to meet whatever requirements arise in terms of:
- Functions: AC or DC I/O, positive or negative logic
- Modularity: 8, 16, 32, or 64 channels per module

The inputs receive signals from the sensors and perform the following functions:
- Acquisition
- Adaptation
- Electrical isolation
- Filtering
- Protection against interference signals

The outputs memorize commands issued by the processor to enable control of the preactuators via the decoupling and amplification circuits.

Description

BMXD●I/D●O/DRA discrete I/O modules are standard format (1 slot). They have an IP20 case to help protect the electronics, and are locked into position with a captive screw.

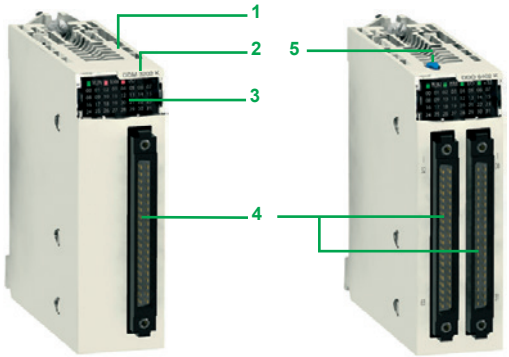


Module for connection via 20-way removable terminal block

I/O modules connected via 20-way removable terminal block

1 Rigid body providing support and protection for the electronic card
2 Module reference marking (a label is also visible on the right-hand side of the module)
3 Channel status display block
4 Connector taking the 20-way removable terminal block for connection of sensors or preactuators

To be ordered separately:
5 **BMXFTB20●0** 20-way removable terminal block (identification label supplied with each I/O module) or a preassembled cordset with a 20-way removable terminal block at one end and flying leads at the other (see page 3/9).



32- and 64-channel modules for connection via one or two 40-way connector(s)

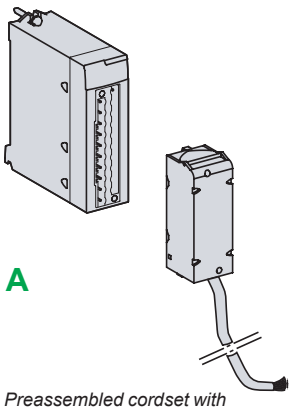
I/O modules connected via 40-way connector(s)

1 Rigid body providing support and protection for the electronic card
2 Module reference marking (a label is also visible on the right-hand side of the module)
3 Channel status display block
4 One or two 40-way connectors (32 or 64 channels) *(1)* for connection of sensors or preactuators
5 With the 64-channel module, a pushbutton which, with successive presses, displays the state of channels 0...31 or 32...63 on the display block **3** (see page 3/10)

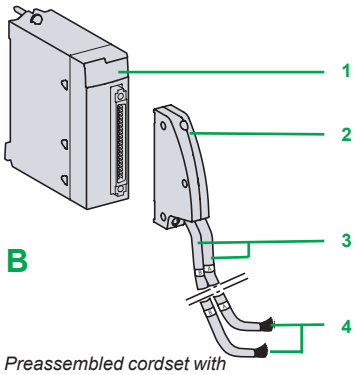
To be ordered separately, depending on the type of module:
One or two preassembled cordset(s) with a 40-way connector (see page 3/9)

(1) Fujitsu FCN 40-way connector

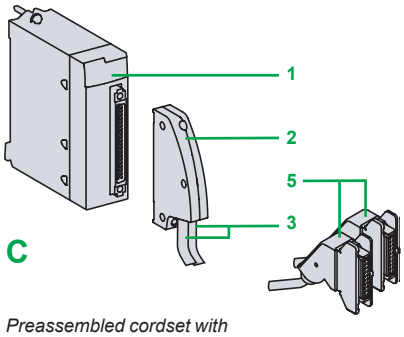
Modicon X80 modules platform
Discrete I/O modules



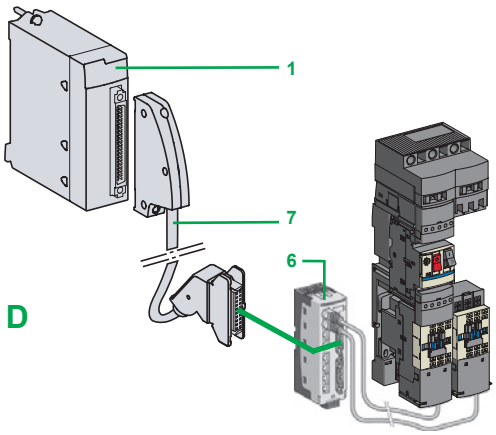
Preassembled cordset with 20-way removable terminal block at one end and flying leads at the other



Preassembled cordset with 40-way connector and two ends with flying leads



Preassembled cordset with 40-way connectors and HE10 connectors for Modicon Telefast ABE7 system



Example of connection to the TeSys Quickfit installation system

Connecting modules with removable terminal blocks

There are three types of 20-way removable terminal block:
- Screw clamp terminal block
- Caged terminal block
- Spring-type terminal block

Each removable terminal block can take:
- Bare wires
- Wires equipped with **DZ5CE** cable ends

A: One version of the removable terminal block is equipped with 3, 5, or 10 m /*4.92, 9.84, or 16.4 ft* cordsets with color-coded flying leads (**BMXFTW●●1**). Use limited to voltages of ≤ 48 V.

Caged terminal blocks

The capacity of each terminal is:
- Minimum: One 0.34 mm² wire (*AWG 22*)
- Maximum: One 1 mm² wire (*AWG 18*)

BMXFTB2000 caged connectors are equipped with captive screws (maximum tightening torque 0.5 N.m/*0.37 lb-ft*).

Screw clamp terminal blocks

The capacity of each terminal is:
- Minimum: One or two 0.34 mm² wires (*AWG 22*)
- Maximum: Two 1.5 mm² wires (*AWG 15*)

BMXFTB2010 screw clamp connectors are equipped with captive screws (maximum tightening torque 0.5 N.m/*0.37 lb-ft*).

Spring terminals

The capacity of each terminal in the **BMXFTB2020** spring-type terminal blocks is:
- Minimum: One 0.34 mm² wire (*AWG 22*)
- Maximum: One 1 mm² wire (*AWG 18*)

Connecting modules with 40-way connectors

Preassembled cordsets with 40-way connector at one end and flying leads at the other

B: Preassembled cordsets can be used for easy direct wire-to-wire connection between the I/O of modules with 40-way connectors **1** and the sensors, preactuators, or intermediate terminal blocks.
These preassembled cordsets comprise:
- At one end, a 40-way connector **2** with either of the following:
- One sheath containing 20 wires with a cross-section of 0.34 mm² (*AWG 22*) (**BMXFCW●●1**)
- Two sheaths **3**, each containing 20 wires with a cross-section of 0.34 mm² (*AWG 22*) (**BMXFCW●●3**)
- At the other end, color-coded flying leads **4** conforming to standard DIN47100

Preassembled cordsets with 40-way connector and HE 10 connector(s)

C: Two types of cordset can be used for connecting the I/O of modules **1** with 40-way connectors to Modicon Telefast ABE7 rapid wiring connection and adaptation interfaces *(1)*.
These preassembled cordsets comprise:
- At one end, a 40-way connector **2** with either of the following:
  - One sheath containing 20 wires (**BMXFCC●●1**)
  - Two sheaths **3** each containing 20 wires (**BMXFCC●●3**)
- At the other end, one or two HE 10 connectors **5**

Connection to TeSys Quickfit system

D: **1** **BMXDDI3202K/6402K** input modules, **BMXDDO3202K/6402K** output modules, and **BMXDDM3202K** mixed I/O modules with 40-way connectors are designed, amongst other things, for use in conjunction with the TeSys Quickfit mounting system via the **LU9G02** splitter module **6** (for 8 motor starters).
The splitter modules are easily connected using **7** **BMXFCC●●1**/**●●3** preassembled cordsets.

24	25	26	27	28	29	30	31

Display block for module BMXDDO6402K

Functions *(1)*

The discrete I/O modules provide the following functions:

■ **Hot swapping**: Due to their special integrated devices, I/O modules (including application-specific modules) can be removed or added while the power is on.

■ **I/O assignment**: The channels of discrete I/O modules are grouped into blocks of 4, 8, or 16 consecutive channels depending on the type of module. Each group of channels can be assigned to a specific application task, namely master or fast.

■ **Protection of DC inputs**: The 24 V ⎓ and 48 V ⎓ inputs are constant-current type. This characteristic limits the current consumed at the inputs.

■ **Protection of DC outputs**: Active transistor outputs can withstand overloads, short-circuits, reverse polarity, and inductive over-voltage.

■ **Reactivation of DC outputs**: If a line fault has caused an output to trip, the output can be reactivated using this parameter if no other terminal line fault is present. Reactivation is controlled by means of a group of 8 channels. It can be programmed or automatic.

■ **RUN/STOP** command: An input can be configured to control the RUN/STOP changeover for the PLC.

■ **Output fallback**: This parameter defines the fallback mode used by the DC transistor outputs when the PLC stops. It can assume the “fallback” value at state 0 or state 1 for the corresponding group of 8 channels or the “maintain” value representing the state of the outputs before the PLC stops.

■ **I/O module diagnostics**: Each discrete I/O module is equipped with a display block on the front panel centralizing the information necessary for module control, diagnostics, and maintenance.

Diagnostics via EcoStruxure Control Expert *(2)*:
Using the integrated diagnostics in EcoStruxure Control Expert *(2)*, local diagnostics screens are available at global hardware configuration level, module level, and channel level.

Remote diagnostics using a Web browser on a “Thin Client” PC:
In addition, the diagnostics described above can be performed remotely using a simple Web browser thanks to the standard Web server integrated in the Modicon X80 I/O platform (processor with integrated Ethernet port or Ethernet module), using the “ready-to-use” Rack Viewer function.

■ **Compatibility with 2-wire and 3-wire sensors**: The discrete input modules can be used in conjunction with OsiSense XS inductive proximity sensors (for compatibility, see page 7/4) and with OsiSense XU photoelectric sensors (for compatibility, see page 7/2).

(1) For further information, please consult our website at www.schneider-electric.com.
(2) EcoStruxure Control Expert software continues the Unity Pro range of software and corresponds to versions ⩾ 14 of Unity Pro.

Complementary characteristics

The following characteristics complement those introduced in the selection guide on pages 3/2 to 3/7.

DC input modules BMXDDI16●●/1604T/3202K/6402K and BMXDAI1602

- Input impedance at nominal voltage: 6.4 to 19.2 kΩ, depending on model
- Reverse polarity: Protection for modules BMXDDI1602/1603/3202K
- Paralleling of inputs *(1)*: Yes, for modules BMXDDI1602/1603
- Dielectric strength between groups of channels: 500 V ⎓ for modules BMXDDI3202K/6402K
- Temperature derating for module BMXDDI1604T: No derating up to 40 °C/*104 °F*, a maximum of 25% of inputs at state 1 at 70 °C/*158 °F*

AC input modules BMXDAI16●●/08●●

- Input frequency: 47 to 63 Hz
- Current peak on activation at nominal voltage: 5 to 380 mA depending on model
- Input impedance at nominal voltage and F = 55 Hz: 6 to 28 kΩ, depending on model

Triac output module BMXDAO1605

- Current via common: 2.4 A
- Current for the 4 commons together: 4.8 A

Isolated triac output module BMXDAO1615

- Current per module: 10 A maximum continuous

DC transistor output modules BMXDDO16●●/3202K/6402K

- Dielectric strength between groups of channels: 500 V ⎓ for modules BMXDDO3202K/6402K

Relay output modules BMXDRA08●●●/1605 and BMXDRC0805

- Protection against AC inductive overvoltage: Use an RC circuit or ZNO surge limiter appropriate to the voltage in parallel on each output.
- Protection against DC inductive overvoltage: Use a discharge diode on each output.

Mixed I/O relay module BMXDDM16025

- Input impedance at nominal voltage: 6.8 kΩ
- Dielectric strength between groups of inputs: 500 V ⎓

DC mixed I/O modules BMXDDM16022/3202K

- Input impedance at nominal voltage: 6.8 to 9.6 kΩ, depending on model
- Reverse polarity on the inputs: Protection
- Paralleling of outputs: Yes, for a maximum of 2 outputs for module BMXDDM16022 and a maximum of 3 outputs for module BMXDDM3202K

(1) This characteristic allows several inputs to be wired in parallel on the same module or on different modules for input redundancy.

Modicon X80 modules platform
Analog I/O modules

Presentation

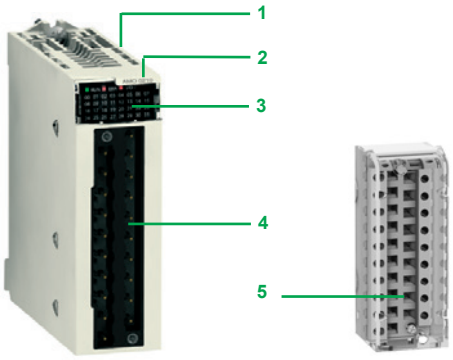
The Modicon X80 I/O analog I/O module offer comprises:
- ■ 5 analog input modules:
  - □ 2 modules with 4 and 8 isolated channels, low-level voltage, thermocouples, Pt, JPt, Ni, or Cu temperature probes and resistors, 15 bits + sign **BMXART0414/0814**
  - □ 1 module with 4 high-speed isolated analog channels, high-level voltage or current, 16 bits **BMXAMI0410**
  - □ 2 modules with 8 high-speed non-isolated analog channels, high-level voltage or current, 15 bits + sign **BMXAMI0800/0810**
- ■ 3 analog output modules:
  - □ 1 module with 2 isolated analog channels, high-level voltage or current, 15 bits + sign **BMXAMO0210**
  - □ 1 module with 4 isolated analog channels, high-level voltage or current, 15 bits + sign **BMXAMO0410**
  - □ 1 module with 8 non-isolated analog channels, high-level current, 15 bits + sign **BMXAMO0802**
- ■ 1 mixed analog I/O module with 4 input channels and 2 output channels (non-isolated), voltage or current, 12 to 14 bits according to type of channel and range **BMXAMM0600**

Analog I/O modules are equipped with a connector for a 20 or 28-way removable terminal block, except for **BMXART0414/0814** analog input modules for thermocouples/temperature probes, which are equipped with one or two 40-way connector(s).

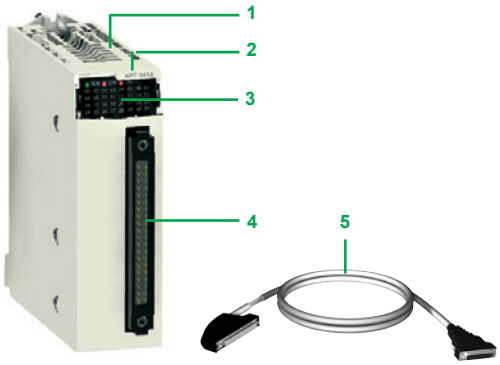
All analog modules occupy a single slot in **BMEXBP●●●** or **BMXXBP●●●** racks. These modules can be installed in any slot in the rack, except the first two (PS and 00), which are reserved for the power supply module and the processor module respectively.

The power supply for the analog functions is supplied by the backplane bus (3.3 V and 24 V). Analog I/O modules are hot-swappable (see page 3/10).

Modicon X80 modules platform
Analog I/O modules



Module for connection via 20 or 28-way removable terminal block



Module for connection via 40-way connector

Description

BMXAM●/ART analog I/O modules are standard format (1 slot). They have a case, which provides IP20 protection of the electronics, and are locked into position by a captive screw.

I/O modules connected via 20 or 28-way removable terminal block

BMXAM● analog I/O modules feature the following:

1 A rigid body providing support and protection for the electronic card
2 A module reference marking (a label is also visible on the right-hand side of the module)
3 A module and channel status display block
4 A connector taking the 20 or 28-way removable screw or spring-type terminal block for directly connecting the sensors or preactuators to the module

To be ordered separately:

5 **BMXFTB20●0** or **BMXFTB28●0** 20 or 28-way removable terminal block (referencing label supplied with each I/O module) or pre-wired cables with:
- A 20-way terminal block at one end and flying leads at the other (**BMXFTW●01S**)
- A 28-way terminal block at one end and flying leads at the other (**BMXFTW●08S**)
- A 20 or 28-way terminal block and a 25-way SUB-D connector (**BMXFCA●●0** or **BMXFTA●●0**), for connection to Modicon Telefast ABE7 sub-bases (see page 3/23)

I/O modules connected via 40-way connector

BMXART analog input modules have the following on the front panel:

1 A rigid body providing support and protection for the electronic card
2 A module reference marking (a label is also visible on the right-hand side of the module)
3 A module and channel status display block
4 One (or two) 40-way connector(s) for connecting the sensors

To be ordered separately:

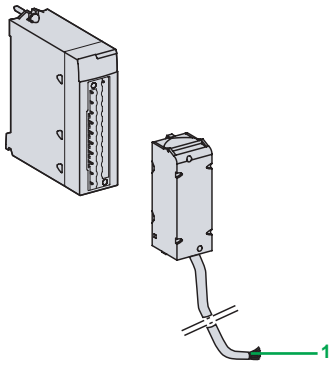
5 Pre-wired cables with:
- A 40-way connector at one end and flying leads at the other (**BMXFCW●01S**)
- A 40-way connector and a 25-way SUB-D connector (**BMXFCA●●2**) for direct connection to Modicon Telefast ABE7 sub-bases (see page 3/23)

To be ordered separately:

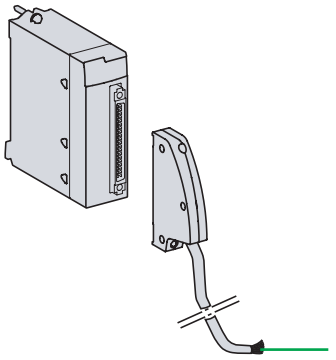
■ A shielding connection kit to help protect against electrostatic discharge, consisting of a metal bar and two sub-bases for mounting on the rack supporting the analog modules

■ A set of **STBXSP3020** clamping rings for the shielding braids of analog signal cables

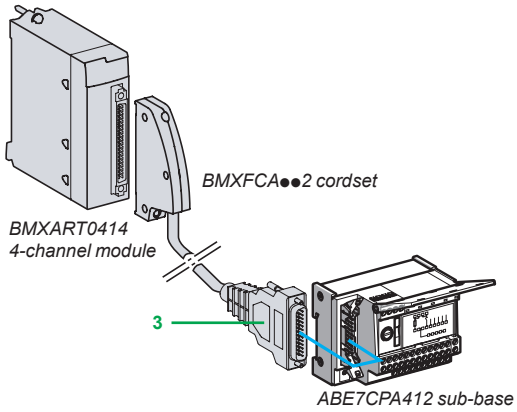
3



BMXFTW●01S cordset
(with 20-way removable terminal block at one end and flying leads at the other)



BMXFCW●01S cordset
(with 40-way connector at one end and flying leads at the other)



Connecting modules with removable terminal blocks

BMXAMI0410, BMXAMO, and BMXAMM modules with 20-way terminal block

The 20-way removable terminal blocks (**BMXFTB20●0**) are the same as those used for discrete I/O modules (screw clamp, caged, or spring-type) (see page 3/9).
One version of the removable terminal block is equipped with a 3 or 5 m/*9.84 or 16.4 ft* cordset with color-coded flying leads (**BMXFTW●01S**). These preassembled cordsets with reinforced shielding have color-coded flying leads at the other end **1**.

BMXAMI0800/0810 modules with 28-way terminal block

The 28-way removable terminal blocks are caged (**BMXFTB2800**) or spring-type (**BMXFTB2820**).
One version of the removable terminal block is equipped with a 3 or 5 m/*9.84 or 16.4 ft* cordset with color-coded flying leads (**BMXFTW●08S**). These preassembled cordsets with reinforced shielding have color-coded flying leads at the other end **1**.

Connecting modules with 40-way connectors

BMXART0●14 modules with 40-way connectors

Two types of cordset are available:

- Preassembled **cordsets with reinforced shielding** (**BMXFCW●01S**) which have color-coded flying leads at the other end **2**. Available in 3 or 5 m/*9.84 or 16.4 ft* lengths, they enable easy direct wire-to-wire connection of the analog sensors via terminal blocks.
- Preassembled cordsets with reinforced shielding (**BMXFCA●02**) which have a 25-way SUB-D connector at the other end **3**. Available in 1.5, 3, or 5 m/*4.92, 9.84, or 16.4 ft* lengths, they enable direct connection to the Modicon Telefast **ABE7CPA412** sub-base (see below).

Use with Modicon Telefast ABE7 sub-bases

Using the Modicon Telefast ABE7 pre-wired system makes it easier to install the modules since the inputs (or outputs) can be accessed via screw terminals. Seven special sub-bases are available:

Modicon Telefast ABE7CPA410 sub-base

The Modicon Telefast **ABE7CPA410** sub-base is mainly used in conjunction with the **BMXAMI0410** voltage/current analog 4-input module. This sub-base allows you to:

- Directly connect 4 sensors
- Remotely locate the input terminals in voltage mode
- Power the 4 to 20 mA conditioning units one channel at a time with a 24 V voltage, protected and limited to 25 mA, while maintaining isolation between channels
- Help protect the current impedance matching resistors integrated in the sub-base against overvoltages

Connection is via the **BMXFCA●●0** cordset (1.5, 3, or 5 m/*4.92, 9.84, or 16.4 ft*).

Modicon Telefast ABE7CPA412 sub-base

The Modicon Telefast **ABE7CPA412** sub-base is specially designed as a wiring interface for the **BMXART0414** and **BMXART0814** thermocouple modules. This sub-base allows you to:

- Connect 4 thermocouple probes
- Provide external cold junction compensation with a temperature probe integrated in the sub-base
- Provide continuity of the shielding

The **BMXART0814** module requires two Modicon Telefast **ABE7CPA412** sub-bases. The connection with each sub-base is made via a **BMXFCA●●2** cordset (1.5, 3, or 5 m/*4.92, 9.84, or 16.4 ft*).

Modicon Telefast ABE7CPA21 sub-base

The Modicon Telefast **ABE7CPA21** sub-base is compatible with the **BMXAMO0210** output module. This sub-base allows you to:

- Directly connect 2 current/voltage outputs
- Provide continuity of the shielding

Connection is via the **BMXFCA●●0** cordset **3** (1.5, 3, or 5 m/*4.92, 9.84, or 16.4 ft*).

Use with Modicon Telefast ABE7 sub-bases (continued)

Modicon Telefast ABE7CPA02 sub-base

The Modicon Telefast **ABE7CPA02** sub-base can be used in combination with:
- **BMXAMI0800/0810** analog current input modules with 8 inputs
- **BMXAMO0802** analog current output modules with 8 outputs

This sub-base allows you to:
- Connect the 8 analog inputs or outputs point-to-point
- Provide continuity of the shielding

BMXAMI0800/0810 modules are connected via 1.5 or 3 m/*4.92 or 9.84 ft* **BMXFTA●●0** cables.
The **BMXAMO0802** module is connected via 1.5, 3, or 5 m/*4.92, 9.84, or 16.4 ft* **BMXFTA●●2** cables.

Modicon Telefast ABE7CPA03 sub-base

The Modicon Telefast **ABE7CPA03** sub-base can be used in combination with the **BMXAMI0800** voltage/current analog 8-input module.
This sub-base allows you to:
- Directly connect 8 analog inputs
- Power the current inputs one channel at a time with a voltage of 24 V that is protected and limited to 25 mA
- Provide continuity of the shielding

The **BMXAMI0800** module is connected via 1.5 or 3 m/*4.92 or 9.84 ft* **BMXFTA●●0** cables.

Modicon Telefast ABE7CPA31/31E sub-bases

The Modicon Telefast **ABE7CPA31/31E** sub-bases can be used in combination with the **BMXAMI0800/0810** voltage/current analog 8-input modules.
These sub-bases allow you to:
- Directly connect 8 analog inputs
- Power the current inputs one channel at a time with 24 V converters
- Provide continuity of the shielding

BMXAMI0800/0810 modules are connected via 1.5 or 3 m/*4.92 or 9.84 ft* **BMXFTA●●0** cables.

Complementary characteristics

BMXART0414/0814 analog input modules

BMXART0414/0814 modules are multirange input modules with 4 or 8 low-level isolated inputs (15 bits + sign) respectively.
Depending on the choice made during configuration, the modules offer, for each of the inputs, the following ranges:
- Temperature probe: Pt100, JPt100, Pt1000, JPt1000, Cu10, Ni100, or Ni1000 (in accordance with DIN43760), with open-circuit detection
- Thermocouple: B, E, J, K, L, N, R, S, T, or U with broken wire detection
- Resistor: 0…400 or 0…4000 Ω, 2-, 3-, or 4-wire
- Voltage: ± 40 mV, ± 80 mV, ± 160 mV, ± 320 mV, ± 640 mV, ± 1.28 V

BMXAMI0410 analog input module

The **BMXAMI0410** module is a high-level analog input module with 4 isolated inputs (16 bits).
Used with sensors or transmitters, it performs monitoring, measurement, and process control functions for continuous processes.
The module offers the following ranges for each of the inputs depending on the choice made during configuration:
- Voltage ± 10 V, ± 5 V, 0…10 V, 0…5 V, and 1…5 V
- Current 0–20 mA, 4–20 mA, and ± 20 mA

BMXAMI0800/0810 analog input modules

BMXAMI0800/0810 analog input modules have 8 high-level isolated/non-isolated analog inputs (15 bits + sign).
The modules offer the following ranges for each of the inputs depending on the choice made during configuration:
- Voltage: ± 10 V, 0…10 V, 0…5 V, 1…5 V, ± 5 V
- Current: 0–20 mA and 4–20 mA

3

Complementary characteristics (continued)

BMXAMO0210 analog output module

The **BMXAMO0210** module has 2 high-level isolated outputs (15 bits + sign).
The **BMXAMO0210** module offers the following ranges for each of the inputs depending on the choice made during configuration:
- Voltage: ± 10 V
- Current: 0–20 mA and 4–20 mA

BMXAMO0410/0802 analog output modules

BMXAMO0410/0802 analog output modules have 4 or 8 high-level isolated/non-isolated analog outputs (16 bits/15 bits + sign).
The **BMXAMO0410** module offers the following ranges for each of the outputs depending on the choice made during configuration:
- Voltage: ± 10 V
- Current: 0–20 mA and 4–20 mA

The **BMXAMO0802** module offers the current ranges 0–20 mA and 4–20 mA.

BMXAMM0600 analog mixed I/O module

The **BMXAMM0600** mixed module is a non-isolated I/O module with 4 inputs (14/12 bits) and 2 outputs (12 bits). The module offers the following ranges for each of the inputs or outputs depending on the choice made during configuration:
- Voltage: ± 10 V, 0…10 V, 0…5 V, and 1…5 V
- Current: 0–20 mA and 4–20 mA

Module for connection via 20-way removable terminal block

Presentation

BMEAH●0●12 HART analog I/O modules contain transceivers that control HART devices and information through the module. They can be managed by the AMS (Asset Management System) or by the automation platform CPU.

These modules require an Ethernet + X-bus backplane and can only be installed in the main local rack with the CPU or in RIO drops with a **BMECRA31210** performance EIO adapter module. They cannot be installed in expansion racks.

Description

BMEAH●0●12 HART analog I/O modules are standard format (1 slot). They have a case, which provides IP20 protection of the electronics, and are locked into position by a captive screw. They are connected via a 20-way removable terminal block.

BMEAH●0●12 HART analog I/O modules feature the following:

1 A rigid body providing support and protection for the electronic card

2 A module reference marking (a label is also visible on the right-hand side of the module)

3 A module and channel status display block

4 A connector taking the 20-way removable screw or spring-type terminal block for directly connecting the sensors or preactuators to the module

To be ordered separately:

5 A **BMXFTB20●0** 20-way removable terminal block (referencing label supplied with each I/O module) or pre-wired cables with:

- A 20-way terminal block at one end and flying leads at the other (**BMXFTW●01S**)
- A 20-way terminal block and a 25-way SUB-D connector (**BMXFCA●●0** or **BMXFTA●●22**), for connection to Modicon Telefast ABE 7 sub-bases

BMXFTW●01S

Connecting modules using 20-way removable terminal blocks

The 20-way removable terminal blocks (**BMXFTB20●0**) are the same as those used for discrete I/O modules (screw clamp, caged or spring-type) (see page 3/13).

One version of the removable terminal block is equipped with a 3 or 5 m/*9.84 or 16.4 ft* cordset with color-coded flying leads (**BMXFTW●01S**). These preassembled cordsets with reinforced shielding have color-coded flying leads at the other end.

BMXFCA●●0

Use with Modicon Telefast ABE7 sub-bases

Modicon Telefast ABE7CPA21 sub-base

The Modicon Telefast **ABE7CPA21** sub-base is compatible with the **BMEAHO0412** output module.

This sub-base allows you to:

- Directly connect two current/voltage outputs
- Ensure continuity of the shielding

Connection is via the **BMXFCA●●0** cordset (1.5, 3, or 5 m/*4.92, 9.84, or 16.4 ft* long).

Modicon Telefast ABE7CPA02 sub-base

The Modicon Telefast **ABE7CPA02** sub-base can be used with the **BMEAHI0812** HART analog input module.

This sub-base allows you to:

- Connect the 8 analog inputs point-to-point
- Ensure continuity of the shielding

The **BMEAHI0812** module is connected by means of the 1.5 or 3 m/*4.92 or 9.84 ft* long **BMXFTA1522/3022** cables.

Use with Modicon Telefast ABE7 sub-bases

Modicon Telefast ABE7CPA03 sub-base

The Modicon Telefast **ABE7CPA03** sub-base can be used with the **BMEAHI0812** HART analog input module.

This sub-base allows you to:
- Directly connect the 8 analog inputs
- Power the current inputs one channel at a time with a voltage of 24 V that is protected and limited to 25 mA
- Ensure continuity of the shielding

The **BMEAHI0812** module is connected by means of the 1.5 or 3 m/*4.92 or 9.84 ft* long **BMXFTA1522/3022** cables *(1)*.

Modicon Telefast ABE7CPA31 sub-base

The Modicon Telefast **ABE7CPA31** sub-base can be used with the **BMEAHI0812** HART analog input module.

This sub-base allows you to:
- Directly connect the 8 analog inputs
- Power the current inputs one channel at a time with 24 V converters
- Ensure continuity of the shielding

The **BMEAHI0812** module is connected by means of the 1.5 or 3 m/*4.92 or 9.84 ft* long **BMXFTA1522/3022** cables.

Additional characteristics

BMEAHI0812 HART analog input module

The **BMEAHI0812** module is a module with 8 high-level isolated inputs (15 bits + sign).

The **BMEAHI0812** module offers the current range 4 - 20 mA for each of the inputs depending on the choice made during configuration.

BMEAHO0412 HART analog output module

The **BMEAHO0412** module is a module with 4 high-level isolated outputs (15 bits + sign).

The **BMEAHO0412** module offers the current range 4 - 20 mA for each of the inputs depending on the choice made during configuration.

Modicon X80 modules platform
Counter modules

Presentation

BMXEHC0200 and **BMXEHC0800** counter modules for the Modicon X80 I/O platform are used to count the pulses generated by a sensor or to process the signals from an incremental encoder.

The two modules differ in their number of counter channels, maximum input frequencies, functions, and auxiliary input and output interfaces:

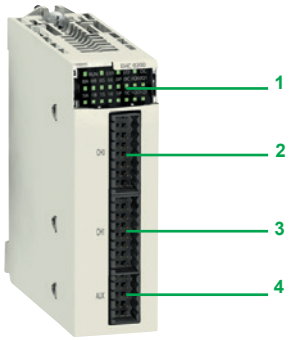
Counter module	No. of channels	Maximum frequency	Integrated functions	No. of physical inputs	No. of physical outputs
BMXEHC0200	2	60 KHz	Upcounting Downcounting Period meter Frequency meter Frequency generator Axis control	6	2
BMXEHC0800	8	10 KHz	Upcounting Downcounting Measurement	2	–

The sensors used on each channel can be:
- 2-wire 24 V proximity sensors
- 3-wire 24 V proximity sensors
- 10/30 V output signal incremental encoders with push-pull outputs

BMXEHC0200/0800 counter modules can be used to meet the demands of applications such as:
- Alarm generation on empty unwinder status using the ratio
- Sorting small parts using the period meter
- Single electronic cam using the dynamic setting thresholds
- Speed control using the period meter

These standard format modules can be installed in any available slot on a Modicon X80 I/O PLC. They are hot-swappable.

In a Modicon X80 I/O PLC configuration, the number of **BMXEHC0200/0800** counter modules should be added to the number of application-specific modules (communication). The function parameters are set by configuration using EcoStruxure Control Expert *(1)* software.



BMXEHC0200

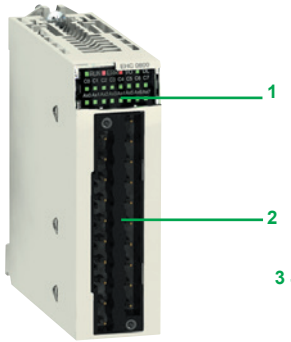
Description

BMXEHC0200/0800 counter modules are standard format. They occupy a single slot in **BM●XBP●●●** racks. They come in a plastic case, which provides IP20 protection of the electronics, and are locked into position by a captive screw.

BMXEHC0200 module, 2 channels, 60 KHz

The front panel of the **BMXEHC0200** counter module features:
1. Module and channel status display block
2. 16-way connector for connecting the sensors of counter 0
3. 16-way connector for connecting the sensors of counter 1
4. 10-way connector for connecting:
   - Auxiliary outputs
   - Sensor power supplies

To be ordered separately:
- A **BMXXTSHSC20** kit containing two 16-way connectors and one 10-way connector
- A **BMXXSP●●00** shielding connection kit if the rack is not already equipped with one (see page 2/5)



BMXEHC0800

BMXFTB20●0

BMXEHC0800 module, 8 channels, 10 KHz

The front panel of the **BMXEHC0800** counter module features:
1. Module and channel status display block
2. Connector taking the **BMXFTB20●0** 20-way removable terminal block **3** (same as that of I/O modules)

To be ordered separately:
- A 20-way removable terminal block **3** (caged, screw clamp, or spring-type) (see page 3/13)
- A **BMXXSP●●00** shielding connection kit if the rack is not already equipped with one (see page 2/5)

(1) EcoStruxure Control Expert software continues the Unity Pro range of software and corresponds to versions ≥ 14 of Unity Pro.

Compatibility: page 1/8 | Racks and power supply modules: page 2/2 | Communication: page 5/8 | Ruggedized modules: page 6/2

Operating modes for module BMXEHC0200

8 configurable modes	Frequency meter	This mode measures a frequency, speed, data rate, or an event stream. As standard, this mode measures the frequency received on the IN A input. This frequency is expressed in Hz (number of pulses/second), with a precision of 1 Hz. The maximum frequency on the IN A input is 60 kHz. The maximum cyclic ratio at 60 kHz is 60%.
	Event counting	This mode is used to determine the number of events received. In this mode, the counter calculates the number of pulses applied to the IN_A input at time intervals defined by the user. The module counts the pulses applied to the IN_A input each time the pulse for this input lasts longer than 5 µs (without anti-bounce filter).
	Period measurement	This mode is used to: ■ Determine the duration of an event ■ Determine the time between 2 events ■ Time and measure the execution time of a process It measures the time elapsed during an event or between 2 events (IN_A input) according to a selectable time base of 1 µs, 100 µs, or 1 ms. The IN_SYNC input can be used to enable or stop a measurement. The module can carry out a maximum of 1 measurement every 5 ms. The shortest measurable pulse is 100 µs, even if the unit defined by the user is 1 µs. The maximum measurable duration is 4,294,967,295 units (unit to be defined).
	Ratio counting	Ratio counting mode only uses the IN_A and IN_B inputs. There are 2 possible modes: ■ Ratio 1: Used to divide 2 frequencies. This is intended for applications such as flowmeters, mixers, etc. ■ Ratio 2: Used to subtract 2 frequencies. This is intended for the same applications, but for those requiring more precise regulation (more similar frequencies). Ratio 1 mode gives the results in thousandths for better accuracy (a display of 2,000 corresponds to a value of 2) and ratio 2 mode gives the results in Hz. The maximum frequency that the module can measure on the IN_A and IN_B inputs is 60 kHz.
	Downcounting	This mode is used to list a group of operations. In this mode, activating the synchronization function starts the counter which, starting from a user-defined preset value, decreases with each pulse applied to the IN_A input, until it reaches 0. This downcounting is made possible when the enable function has been activated. The counting register is thus updated at 1 ms intervals. One basic use of this mode is to signal, using an output, the end of a group of operations (when the counter reaches 0). The shortest pulse applied to the IN_SYNC input is 100 µs. The maximum frequency applied to the IN_SYNC input is 1 pulse every 5 ms. The maximum user-defined preset value is 4,294,967,295. The maximum count value is 4,294,967,295 units.
	Loop (modulo) counting	This mode is used in packaging and labeling applications where actions are repeated on sets of moving objects: ■ In upcounting, the counter increases until it reaches the user-defined “modulo - 1” value. On the next pulse, the counter is reset to 0 and upcounting restarts. ■ In downcounting, the counter decreases until it reaches 0. On the next pulse, the counter is reset to the user-defined “modulo - 1” value. Downcounting can then restart. The maximum frequency applied to the IN_A and IN_B inputs is 60 kHz. The maximum frequency of the modulo event is 1 event every 5 ms. The maximum modulo value is 4,294,967,296 (possible by declaring 0 in the modulo adjust value).
	32-bit counter counting	This mode is mainly used in axis following. The maximum frequency applied simultaneously to the IN_A and IN_B inputs is 60 kHz. The maximum frequency of the referencing event is 1 event every 5 ms. The counter value is between -2,147,483,648 and +2,147,483,647.
	Width modulation	In this operating mode, the module uses an internal clock generator to supply a periodic signal on the module's O0 output. Only the O0 output is affected by this mode, as the O1 output is independent of it. The maximum output frequency is 4 kHz. As O0 is a source output, a load resistor is necessary for the O0 output signal to change to 0 at the correct frequency. The cyclic ratio adjustment range varies according to the frequency of the O0 output.

Operating modes for module BMXEHC0800

5 configurable 16-bit modes	Frequency meter	This mode measures a frequency, speed, rate, or data stream control. As standard, this mode measures the frequency received on the IN A input. This frequency is expressed in Hz (number of pulses per second), with a precision of 1 Hz. The maximum frequency on the IN A input is 10 kHz. The maximum cyclic ratio at 10 kHz is 60%.
	Event counting	This mode is used to determine the number of events received. In this mode, the counter calculates the number of pulses applied to the IN_A input at time intervals defined by the user. As an option, it is possible to use the IN_AUX input during a period of time, provided that the enable bit has been configured. The module counts the pulses applied to the IN_A input each time the pulse for this input lasts longer than 50 µs (without anti-bounce filter). Pulses with less than 100 ms synchronization are lost.
	Downcounting	This mode is used to list a group of operations. In this mode, when counting is enabled (software validation via the valid_sync command), a rising or falling edge on the IN_AUX input causes a value, defined by the user, to be loaded in the counter. The latter decreases with each pulse applied to the IN_A input until it reaches the value 0. Downcounting is made possible when the force_enable command is high (software positioning). The smallest pulse applied to the IN_AUX input varies according to the selected filter level. The maximum frequency applied to the IN_AUX input is 1 pulse every 25 ms.
	Loop (modulo) counting	This mode is used in packaging and labeling applications where actions are repeated on sets of moving objects. The counter increases with each pulse applied to the IN_A input until it reaches the user-defined “modulo - 1” value. On the next pulse in the upcounting direction, the counter is reset to 0 and upcounting restarts. The maximum frequency applied to the IN_A input is 10 kHz. The smallest pulse applied to the IN_AUX input varies according to the selected filter level. The maximum frequency of the modulo event is 1 event every 25 ms. The maximum modulo value is 65,536 units.
	Up/down counter	This mode is used for an accumulation, upcounting, or downcounting operation on a single input. Each pulse applied to the IN_A input produces: ■ Upcounting of pulses if the IN_AUX input is high ■ Downcounting of pulses if the IN_AUX input is low The counter values vary between the limits -65,536 and +65,535. The maximum frequency applied to the IN_A input is 10 kHz. Pulses applied to the IN_A input after a change of direction are only upcounted or downcounted after a period corresponding to the delay for taking account of the state of the IN_AUX input due to the programmable filter level on this input.
One 32-bit mode	32-bit counter counting	32-bit counter counting mode is available for channels 0, 2, 4, and 6 (channels 1, 3, 5, and 7 are now inactive). It behaves in the same way as the up/down counting mode using up to 3 physical inputs. It enables simultaneous upcounting and downcounting. The counter values vary between the limits -2,147,483,648 and +2,147,483,647 (31 bits + sign). The maximum frequency applied to the IN_A and IN_B inputs is 10 kHz. The smallest pulse applied to the IN_AUX input is defined according to the filtering applied to this input. The maximum frequency of loading the preset value is 1 every 25 ms.

Modicon X80 modules platform
Time-stamping module

BMXERT1604T/BMXERT1604H

Presentation

The time-stamping module is a complete solution providing a SCADA with a sequence of events that are time-stamped at source, enabling the user to analyze the source of any abnormal behavior in an automated system.

The SOE (sequence of events) is displayed in the alarms log or in the list of events for a client such as a SCADA.

Each event in the SOE is a change of value (transition) of a discrete I/O detected by a time-stamping module.

Advantages

Using the time-stamping system has the following advantages:
- No PLC programming
- Direct communication between the time-stamping modules and the client; if the time-stamping modules are in a Quantum Ethernet I/O drop, the bandwidth of the PLC communication is not used
- Consistency of the I/O values between the process (time-stamping modules) and the client
- Consistency is maintained irrespective of the operating mode
- No loss of events under normal operating conditions
- Management of Hot Standby configurations on the PLC and/or SCADA redundancy

Composition of a time-stamping architecture

BM●CRA312●0 module

This time-stamping module can be at the source of any discrete I/O signal located in the drop with a resolution of 10 ms.
To help ensure no event is lost, all events are stored and kept in a buffer located in the product until OFS takes them.
Synchronization of the CRA module uses the NTP protocol.

BMXERT1604T/H module

This module has 16 discrete inputs which carry out the time-stamping at source outputs with a resolution of 1 ms.
To help ensure no event is lost, all events are stored and kept in a buffer located in the product until OFS takes them.
This module can be placed either in an RIO drop, or in a local rack equipped with a BM●CRA31210 module.
The CRA module is synchronized via the DCF 77 or IRIG-B standards.

OFS V3.60

OFS V3.60 is used to access events stored in the various buffers in the architecture and to place them in the SCADA via the standard OPC DA protocol. For further information, consult our website www.schneider-electric.com.

Vijeo Citect V7.40

Vijeo Citect V7.40 receives events transmitted by OFS and displays them in the SOE or in the list of alarms.

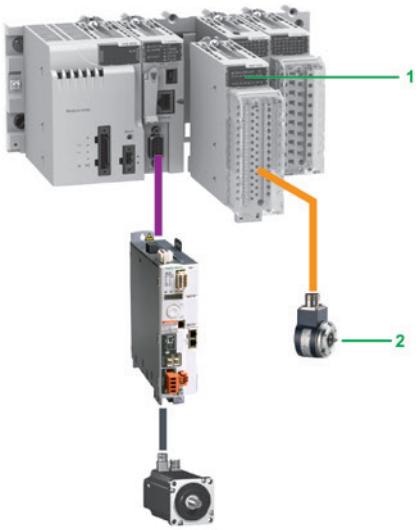
Modicon X80 modules platform
SSI encoder interface module



Modicon X80 I/O platform with Modicon M340 processor

Presentation

The **BMXEAE0300** SSI encoder interface module **1** for the Modicon automation platform *(1)* is a 3-channel standard synchronous serial interface module designed for use with SSI absolute encoders **2**.

The **BMXEAE0300** module enables SSI encoder values to be processed on PAC platforms for applications requiring accurate position/angular control, such as:
- Hydro power, e.g. dam inlet gate position control
- Wind power, e.g. wind turbine blade pitch control
- Complex motion loop control, e.g. ship elevator, blast furnace, flame cutting, etc.

The **BMXEAE0300** module provides a migration path from Premium (with **TSXCTY2C** measurement and counter module) to the Modicon X80 I/O platform SSI solution to compete in the above market segments.

Like any other application-specific module, the **BMXEAE0300** module is installed in the rack slots (01 to 11). The number of modules is limited by the maxiumum number of application-specific channels permitted according to the CPU type (consult our website www.schneider-electric.com).

Dam inlet gate control

Inlet gate control enables the water level in a dam to be monitored and controlled:
- The SSI encoder provides the PLC with accurate feedback of the gate position for precise monitoring of gate opening, adjustment, and positioning.
- The SSI interface converts the signals from the SSI encoders and transmits them to the CPU.

Wind turbine blade pitch control

Pitch control is required for adjusting the angle of the wind turbine blades in relation to the wind direction and strength, in order to achieve optimum energy conversion efficiency.
- The SSI absolute encoder is frequently used to feed back the position of the blade due to its reliability and robustness.
- Typically, the position of each of the three blades is read by the SSI encoders and then transmitted to the CPU via the SSI interface for motion loop control. Sometimes, 3 additional SSI inputs act as backup. Therefore, this new offer is adequately sized for the channel density.

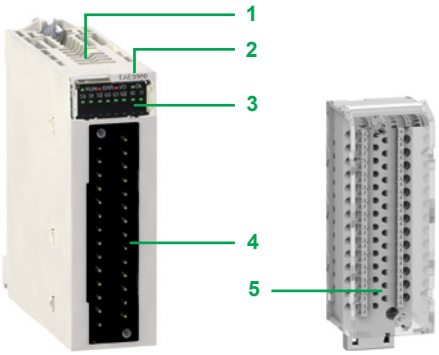
Description

The **BMXEAE0300** SSI encoder interface module is standard format (1 slot). Its housing provides IP20 protection of the electronics and it is locked in each slot (**01** to **11**) by a captive screw.

The front panel of the **BMXEAE0300** module features:
1 A rigid housing providing support and protection for the electronic card
2 The module reference marking (a label is also visible on the right-hand side of the module)
3 A display block indicating:
- Module status via 4 LEDs:
  - RUN (green): module operating status
  - ERR (red): internal fault detected in the module or a fault detected between the module and the rest of the configuration
  - I/O (red): external fault detected
  - DL (green): firmware download status
- Status of the 3 SSI channels via 8 LEDs:
  - Sx (green): channel x input (x = 0, 1, or 2)
  - Qx (green): reflex output for channel x (x = 0, 1, or 2)
  - I0/1 (green): capture inputs for the 3 SSI channels

4 A connector for a 28-way terminal block, for connecting to a removable caged or spring terminal block on sensors and preactuators

To be ordered separately:
5 A 28-way removable caged terminal block **BMXFTB2800** or spring terminal block **BMXFTB2820**, supplied with a channel identification label
- A shielding connection kit to help protect against electrostatic discharge, consisting of a metal bar and two sub-bases for mounting on the rack: **BMXXSP●●00** (reference dependent on the number of slots in the rack) (see page 2/5)
- A set of clamping rings **STBXSP30●0** for the connection cable shielding braids (reference dependent on the cable diameter) (see page 2/5)



BMXEAE0300 *BMXFTB28●0*

Module specifications and functions

Specifications

The SSI module **BMXEAE0300** is a 3-channel, synchronous serial interface, absolute encoder interface for Modicon PLCs. It supports:

- 3 channels of SSI inputs (DATA pair, CLK pair, 24 VDC field power supply to encoder)
- 1 reflex output for each SSI channel (Q)
- 2 capture inputs for the 3 SSI channels (CAP_IN0, CAP_IN1)
- 8 to 31 bits data width
- 4 baud rates (100 kHz, 200 kHz, 500 kHz, and 1 MHz)
- Capture and compare functions

Basic and optional functions

The following table presents the main functions of the **BMXEAE0300** module:

Function	Basic/ optional	Description
Absolute SSI encoder value acquisition	Basic	The position values of the SSI channel are automatically read by the module within 1 ms, unless the channel is disabled.
Modulo	Optional for motion	The modulo function limits the dynamics of the position value to within the power of 2. An event (if enabled) detects the passing of the modulo. The reflex output can also be detected when the modulo is passed (if configured).
Reduction	Optional for motion	This function reduces the intrinsic resolution of the encoder by a value defined by the “reduction” parameter. This reduction is carried out by a shift in the bit field provided by the encoder.
Offset	Optional for motion	The correction function of the encoder offset systematically corrects the offset produced by the encoder at mechanical position “0”. The user enters the absolute encoder offset parameter.
Capture	Optional for events	The two capture input registers (per channel) enable the PLC program to carry out a dynamic measurement function between two points. The capture action can be triggered by two capture inputs. The event will be triggered at each capture.
Compare	Optional for events	Two independent comparators (per channel), with thresholds that can be modified by adjustment (explicit exchange), are able to generate an event or reflex output when the threshold is crossed.

Main features

- Supported by EcoStruxure Control Expert *(1)*.
- Supports absolute encoder 24 V model with standard SSI interface, including Telemecanique Sensors OsiSense SSI encoders. For further information, consult the website www.tesensors.com.
- Standards and approvals: CE, UL, CSA, C-Tick, GOST, etc.

Modicon X80 modules platform
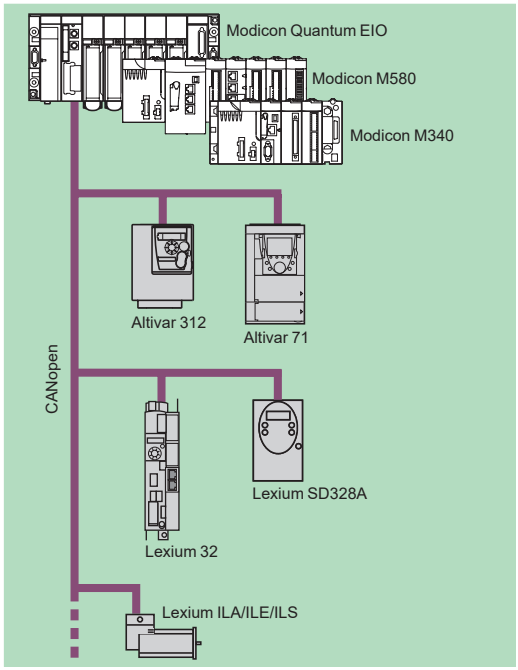
MFB motion control



MFB: Motion control distributed over CANopen

Presentation

MFB (Motion Function Blocks) is a library of function blocks integrated in EcoStruxure Control Expert *(1)* used to set up motion control in the architectures of drives and servo drives on CANopen buses:

- Altivar 312: For asynchronous motors from 0.18 to 15 kW/*0.25 to 20 HP*
- Altivar 71: For synchronous or asynchronous motors from 0.37 to 500 kW/*0.5 to 700 HP*
- Lexium 32: For servo motors from 0.15 to 7 kW/*0.20 to 10 HP*
- Lexium ILA/ILE/ILS: Integrated motor drives from 0.10 to 0.35 kW/*0.13 to 0.47 HP*
- Lexium SD328A: For 3-phase stepper motors from 0.35 to 0.75 kW/*0.47 to 1 HP*

In compliance with PLCopen specifications, the MFB library allows both easy and flexible motion programming with EcoStruxure Control Expert *(1)*, as well as axis diagnosis.
In maintenance operations, drives can be replaced quickly thanks to drive parameter download blocks.
Setting up drives on the CANopen network is facilitated through Motion Tree Manager organization in the EcoStruxure Control Expert *(1)* browser, making it easy for users to access the application drives.

Applications

The features of the Motion Function Blocks library are particularly suitable for machines with independent axes. In the case of these modular/special machines, MFB function blocks are an ideal solution for controlling single axes. The following are typical applications for this type of architecture:

- Automatic storage/removal
- Material handling
- Palletizers/depalletizers
- Conveyors
- Packaging, simple labeling application
- Grouping/ungrouping
- Adjustment axes in flexible machines, etc.

Functions

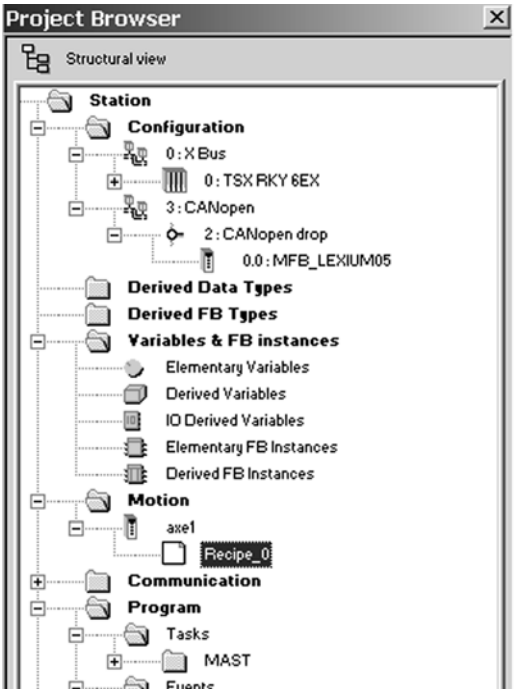
The table below lists the function blocks of the MFB library and the compatible drives. The prefix indicates the block family:

- MC: Function block defined by the Motion Function Blocks PLC Open standard
- TE: Function block specific to Schneider Electric products
- Lxm: Function block specific to Lexium servo drives

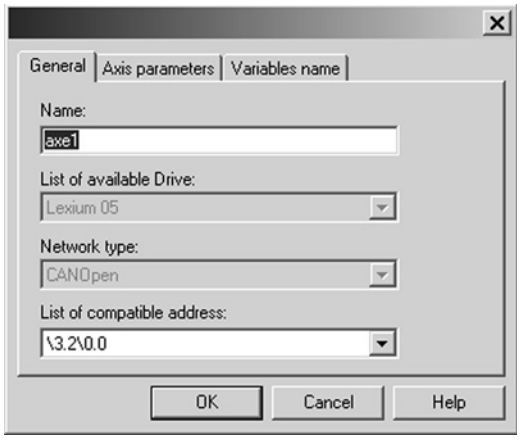
Type	Function	Function block	Altivar 312	Altivar 71	Lexium 32	Lexium ILA/ ILE/ILS	Lexium SD328A
Management and motion	Read an internal parameter	MC_ReadParameter					
	Write an internal parameter	MC_WriteParameter					
	Read the current position	MC_ReadActualPosition					
	Read the instantaneous speed	MC_ReadActualVelocity					
	Acknowledge detected error messages	MC_Reset					
	Stop any active movement	MC_Stop					
	Axis coming to standstill	MC_Power					
	Movement to absolute position	MC_MoveAbsolute					
	Relative movement	MC_MoveRelative					
	Additional movement	MC_MoveAdditive					
	Homing	MC_Home					
	Movement at given speed	MC_MoveVelocity					
	Read diagnostic data	MC_ReadAxisError					
	Read servo drive status	MC_ReadStatus					
	Torque control	MC_TorqueControl					
	Read actual torque value	MC_ReadActualTorque					
	Manual control	MC_Jog					
Save and restore parameters (FDR)	Read drive parameters and store in PLC memory	TE_UploadDriveParam					
	Write drive parameters from PLC memory	TE_DownloadDriveParam					
Advanced Lexium functions	Read a motion task	Lxm_UploadMTask					
	Write a motion task	Lxm_DownloadMTask					
	Start a motion task	Lxm_StartMTask			*(1)*		
	Set the reduction ratio, signed	Lxm_GearPosS			*(1)*		
System	Communication with the servo drive	TE_CAN_Handler					

Compatible

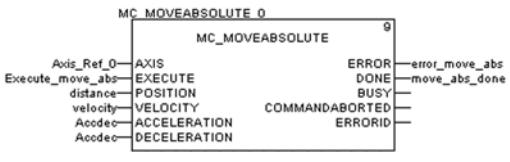
(1) The Lxm_StartMTask and Lxm_GearPosS function blocks are only compatible with Lexium 32 (LXM32M) servo drives.



Motion Tree Manager integrated in the EcoSruxure Control Expert browser



General parameters: Axis name and address



MFB: Programming a movement in absolute mode

Motion Tree Manager

Motion Tree Manager is associated with MFB library of EcoStruxure Control Expert *(1)* and integrated in its browser. It provides specific assistance for:

- Axis object management
- Axis variable definition
- Drive parameter management

Motion Tree Manager automatically creates links between the CANopen bus configuration and the MFB function block data using a limited amount of configuration data.

General axis parameters

In this tab, the designer is prompted to define:

- The name of the axis that will identify it in the browser for the entire application
- The address of the drive on the CANopen bus

Axis parameters

The drop-down lists in this tab are used to determine the exact type of drive: family, version.

Variable names

This last tab is used to identify data structures:

- **Axis_Reference**: Used by the function block instances for the axis in question
- **CAN_Handler**: Used to manage communication with the drive via the CANopen network

Recipe definition

The “recipes” attached to the axis are the data structures containing the adjustment parameters of a given drive. This data is used when:

- Changing the drive with restoration of the context during “Faulty Device Replacement” (FDR) maintenance
- Changing the manufacturing program of the machine and calling up an appropriate set of parameters: servo control gains, limitations, etc. adapted to the weight and size of the moving parts
- Saving parameters in the initial values of the PLC application

Programming, diagnostics, and maintenance

Communication between the PLC and drive is automatically set up by the system as soon as a TE_CAN_Handler instance is declared in the EcoStruxure Control Expert *(1)* task with which the axis is associated. Movements are then programmed by sequencing function blocks from the library in the user's chosen EcoStruxure Control Expert *(1)* editor (LD, ST, FBD).

The two function blocks, MC_ReadStatus, and in some cases MC_ReadAxisError, are useful for determining the overall status of the axis, as well as the code of the active detected errors.

The function blocks TE_UploadDriveParam and TE_DownloadDriveParam allow the application to save the drive parameters (recipe) and to then quickly reload them into another drive when it is necessary to change the original one.

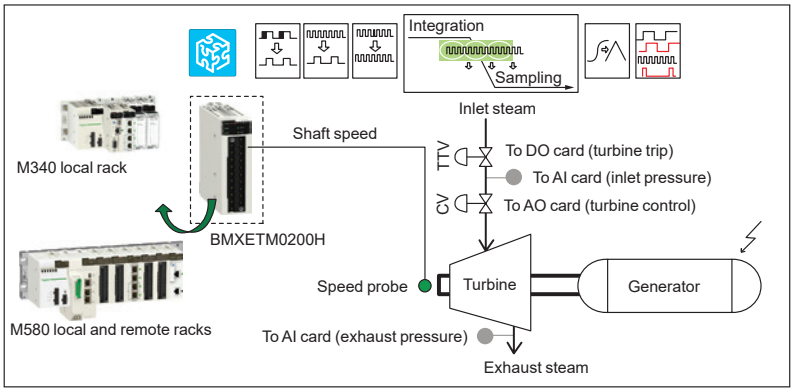
Modicon X80 modules platform
Frequency input module

Presentation

The **BMXETM0200H** frequency input module offers turbine shaft and engine speed monitoring functionality for general purpose turbomachinery control (TMC) applications. It can be integrated into Modicon M340 and M580 standard and high-availability systems.
TMC applications include prime movers, driven equipment, auxiliaries, mechanical retrofits, and protection. With the Modicon Package solution, the frequency input and measurement function is available for the following general purpose TMC application types:

- Large hydro turbines
- Small steam turbine generators
- Small hydro turbines
- Small mechanical drive gas turbines
- Diesel generators
- Reciprocating compressors
- Packaged air compressors
- Single-stage mechanical drive turbines: pumps



TMC governor control system architecture

BMXETM0200H

Functionality

The purpose of the **BMXETM0200H** module is to monitor the turbine shaft or engine speed. It is designed to receive electrical pulses generated by the gear tooth sensing probe, cam, and crank etc. and convert these pulses into a numerical value. The measured value of the turbine shaft rotating velocity is highly accurate with a fast refresh rate.

With the **BMXETM0200H** module providing frequency input and measurement, Modicon PACs build up a closed loop control system as part of the turbomachinery governor. This control mechanism will automatically track and direct the speed of driven equipment (such as a generator or compressor) and a prime mover (such as a turbine or engine) under varying load conditions with the aim of:

- maintaining the selected speed
- limiting slow and fast speeds
- helping to protect mechanical parts and customer investment by anticipating overspeeds by means of its acceleration and jerk detection capability

Modicon X80 modules platform
Frequency input module

Module specifications

Availability and compatibility

Available for Modicon M340 and M580 standalone and HSBY platforms, on local rack or RIO rack with hot swapping supported.

Ambient operating temperature

Hardened with extended temperature range from -25…70 °C/*-13…158 °F* and conformal coating.

Measurement performance

Two frequency input channels for 1 V and 1 Hz signal up to a maximum of 500 KHz with 100 KHz, 10 KHz, and 1 KHz input filters.

Supported signal source device type

Speed sensor inputs support passive pickup, active speed sensor (output OC, TTL, ST), potential transformer, and incremental encoder.

Digital reflex outputs

1 positive 24 VDC reflex digital output per channel controlled from an embedded comparator.

Error detection

Detects broken wire and probe health status.

Dedicated TMC functions

A set of dedicated TMC functions for turbine shaft monitoring, including:
- Frequency pattern recognition up to 512 pulses per pattern
- Acceleration and jerk detection
- Phase angle and ratio detection between channels
- Scaling factor for RPM measurement up to 1,024 teeth per revolution
- Alarm bits that can be time-stamped by the Modicon M580 controller

Software configuration

Configurable using EcoStruxure Control Expert *(1)* or Unity Pro V11 (S, L, and XL) with TMC Hotfix integrated.

Modicon X80 modules platform
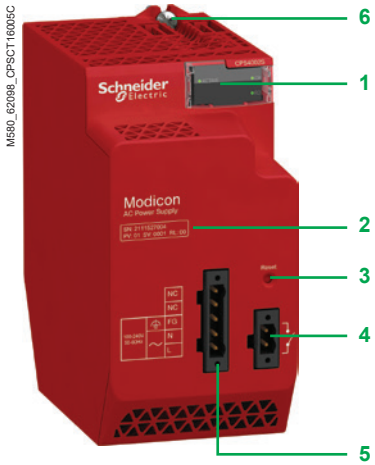
Safety power supply modules



BMXCPS●●●2S

Presentation

The Safety power supply in the Modicon X80 I/O offer is the **BMXCPS●●●2S**.

The **BMXCPS4022S** power supply module:
- Converts 24...48 V ⎓ power into two output voltages, 24 V ⎓ and 3.3 V ⎓, which are distributed over the backplane
- Detects overvoltage, overload, and short-circuit conditions on both the 3.3 V ⎓ and 24 V ⎓ backplane lines

The **BMXCPS3522S** power supply module:
- Converts 100...150 V ∿ power into two output voltages, 24 V ⎓ and 3.3 V ⎓, which are distributed over the backplane
- Detects overvoltage, overload, and short-circuit conditions on both the 3.3 V ⎓ and 24 V ⎓ backplane lines

The **BMXCPS4002S** power supply module:
- Converts 110...240 V ∿ power into two output voltages, 24 V ⎓ and 3.3 V ⎓, which are distributed over the backplane
- Detects overvoltage, overload, and short-circuit conditions on both the 3.3 V ⎓ and 24 V ⎓ backplane lines, and allows a maximum voltage of 30 V ⎓

Description

The **BMXCPS●●●2S** power supply module includes:
1. Display panel comprising LEDs with various combinations to provide quick diagnostics of the power supply module status:
   - ACTIVE LED (green): On when the power supply is the master power supply, off when it acts as a slave supply in a redundant application
   - OK LED (green): On if the rack voltages are present and correct
   - RD LED (green): On when all the internal power supply modules function normally
2. Printed serial number and product version
3. Pencil-point Reset pushbutton for a cold restart of the application
4. 2-way connector that can take a removable terminal block (caged or spring-type) for connecting the alarm relay
5. A 5-way connector that can take a removable terminal block (caged or spring-type) for connecting the following:
   - AC or DC line supply
   - Protective ground
6. 1 hook and 1 screw for mechanical attachment and grounding connection to the backplane

Included with each power supply module: Set of two caged removable terminal blocks (5-way and 2-way) **BMXXTSCPS10**

To be ordered separately (if necessary): Set of two spring-type removable terminal blocks (5-way and 2-way) **BMXXTSCPS20**

Compatibility of the power supply with the rack

The **BMXCPS●●●2S** is a safety-certified power supply that can be used as:
- a main local rack
- an extended local rack
- a main remote rack
- an extended remote rack

The **BMXCPS●●●2S** is a redundant power supply module. It can be installed alone in single power supply rack or dual power supply rack as a pair (master and slave)

For high-availability applications, two independent redundant power supplies can be used to increase the security of the power supply. In case the master power supply fails to provide the whole current, the slave power supply changes to master mode and continues to function.

The power supply module has to be inserted in the leftmost power supply slots on each rack (marked CPS).

Advanced diagnostics

The **BMXCPS●●●2S** can provide advanced diagnostics such as current load, temperatures, remaining life time, and undervoltage thresholds. These unique values will help to simplify maintenance by predicting when to replace the power supply before it fails.

Note: *LED diagnostic display is provided for the module and for each input channel.*

Functions

Alarm relay

The alarm relay incorporated in each power supply module has a volt-free contact accessible on the front panel, on the 2-way connector.

The operating principle is as follows:
- The alarm relay is energized and its contact is closed (state 1) in normal operation, with the PLC in RUN.
- The relay de-energizes and its associated contact opens (state 0) whenever the application stops, even partially, due to any of the following:
  - Occurrence of a blocking fault (RAM detected error in memory check, Safety watchdog overrun detected on CPU, etc.)
  - Incorrect rack output voltages
  - Loss of supply voltage

Reset pushbutton

The power supply module in each rack has a Reset button on the front panel.

Pressing the Reset button on the power supply causes re-initialization of all modules in the same rack as the power supply. If the **BMXCPS●●●2S** power supply module is in the main local rack, pressing the Reset button causes re-initialization of the CPU.

In a redundant design, with two **BMXCPS●●●2S** power supply modules, you can press the Reset button on either, or both, power supply modules to execute the reset function.
Pressing this pushbutton triggers a sequence of service signals, which is the same as that for:
- A power break, when the pushbutton is pressed.
- A power-up, when the pushbutton is released

In terms of the application, these operations represent a cold start (forcing the I/O modules to state 0 and initializing the processor).

Presentation of Safety I/O modules

X80 is a powerful, proven solution for integrating an homogeneous automation architecture with a unique process and safety platform.

In the Modicon X80 offer, a Safety project can include both Safety modules and non-safety modules:
- Safety modules in the SAFE task
- Non-safety modules only for the non-safety tasks (MAST, FAST, AUX0, and AUX1)

Only non-safety modules that do not interfere with the safety function can be added to a Safety project.

Safety I/O modules can be used to connect the Safety PAC to sensors and actuators that are not part of the safety function loop.
Each Safety I/O module incorporates a dedicated Safety processor.

Safety I/O modules can be installed in the local backplane or in RIO drops.

All Safety I/O modules support SIL3 standards according to IEC 61508. The assessment is indicated by the category (Cat) and performance level (PL).

Each Safety I/O module provides module and channel LED diagnostics on the front face of the module:
- The top four LEDs (Run, Err, I/O, and Lck) indicate the module status.
- The bottom rows of LEDs combine with the top four LEDs to indicate the state and health of each input or output channel.

Presentation of Safety discrete I/O modules

There are three Safety discrete I/O modules in the Modicon X80 I/O offer:
- **BMXSDI1602** discrete input module
- **BMXSDO0802** discrete output module
- **BMXSRA0405** discrete relay output module

These modules can only be used with a Safety CPU.

BMXSDI1602

The **BMXSDI1602** Safety discrete input module has the following features:
- 16 Type 3 *(1)* inputs, in two groups of 8 non-isolated inputs
- 24 V ⎓ nominal input voltage
- Achieves SIL3, Cat2/PLd assessment using 1 input channel and Cat4/PLe using 2 input channels
- Compatible with 2- or 3-wire proximity sensors
- Optional provision of two 24 V ⎓ outputs (VS1 and VS2) for short-circuit to 24 V ⎓ monitoring
- Monitoring of external 24 V ⎓ sensor supply voltage

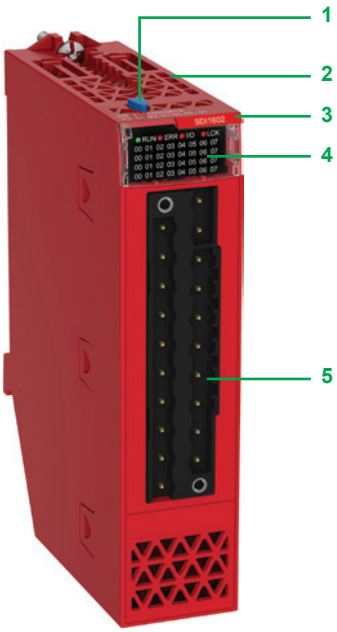
BMXSDO0802

The **BMXSDO0802** Safety discrete output module has the following features:
- 8 non-isolated 0.5 A outputs
- 24 V ⎓ nominal output voltage
- Achieves SIL3, Cat4/PLe assessment
- Monitoring of the external pre-actuator power supply

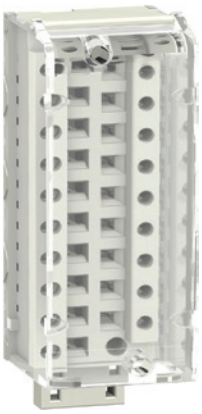
BMXSRA0405

The **BMXSRA0405** Safety discrete relay output module has the following features:
- 4 relay outputs with 5 A current
- 24 V ⎓ and 24...230 V ∿ nominal output voltage (overvoltage category II)
- Achieves SIL2, Cat2/PLc assessment using 1 relay and SIL3, Cat4/PLe using 2 relays
- Support for 8 pre-defined application wiring configuration selections
- Configurable automatic self-test monitoring of the relay capacity to execute the commanded output state (depending on the selected application wiring configuration)
- Configurable module settings for fallback mode and fallback timeout (in ms)

(1) According to IEC61131-2 standard



Safety discrete I/O module



BMXFTB2000

Description

Safety discrete I/O modules are standard format with one slot. They have an IP20 housing to help protect the electronics, and are locked into position with a captive screw.

To be ordered separately: A **BMXFTB20●0** 20-way removable terminal block (identification label supplied with each I/O module) or a preassembled cordset with a 20-way removable terminal block at one end and flying leads at the other (see connections on page 4/7):
BMXSDI1602, **BMXSDO0802**, and **BMXSRA0405**, Safety discrete modules include:

1 Lock/unlock configuration button
2 Rigid body providing support and protection for the electronic card
3 Module reference marking (a label is also visible on the right-hand side of the module)
4 Display panel comprising LEDs with various combinations to provide quick diagnostics of the status of the module and each channel:
- RUN LED (green): module in operation
- ERR LED (red): detected module error
- I/O LED (red): detected I/O error
- LCK LED (bi-color green/red): indicates the configuration status
- 1 LED per channel (bi-color green/red): indicates the channel status

5 Connector taking the 20-way removable terminal block for connecting sensors or preactuators

Connections

20-way removable terminal blocks are used to connect the three Safety discrete I/O modules.

There are three types of 20-way removable terminal block:

- caged terminal block **BMXFTB2000** *(1)*
- screw clamp terminal block **BMXFTB2010** *(1)*
- spring-type terminal block **BMXFTB2020** *(1)*

Type of terminal block	Minimum capacity	Maximum capacity
Caged *(1)*	One 0.34 mm² wire *(AWG 22)*	One 1 mm² wire *(AWG 18)*
Screw clamp *(1)*	One or two 0.34 mm² wires *(AWG 22)*	Two 1.5 mm² wires *(AWG 15)*
Spring-type	One 0.34 mm² wire *(AWG 22)*	One 1 mm² wire *(AWG 18)*

(1) Connectors are equipped with captive screws: max. tightening torque 0.5 N.m/0.37 lb-ft.

Note: *No cordset is provided for cabling Safety X80 I/O modules. Too many options are possible according to the kind of:*
- application: safety only, safety mixed with availability, etc.
- functional safety level: SIL3/Cat2, SIL3/Cat4, SIL2, etc.
For more information on the different cabling options, please refer to the detailed user manuals published on our website: www.schneider-electric.com.

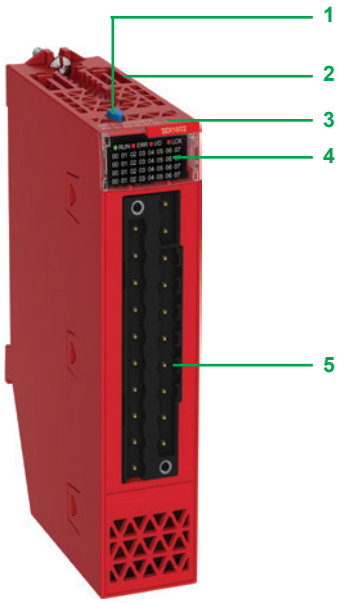
Safety analog input module

M580_62098_CPSCT16001D



BMXSAI0410

Presentation

The Safety analog input module in the Modicon X80 I/O offer is the **BMXSAI0410**:
The **BMXSAI0410** Safety analog input module has the following features:
- 4 isolated analog 4...20 mA current input channels
- 16-bit resolution (12,500 counts), spanning the data range 0...25 mA
- Current out of range detection, for current values less than 3.75 mA or greater than 20.75 mA
- Achieves SIL3, Cat2/PLd assessment using 1 input channel and SIL3, Cat4/PLe using 2 input channels

This module can only be used with a Safety CPU.

Description

The **BMXSAI0410** Safety analog input module includes:
1 Lock/unlock configuration button
2 Rigid body providing support and protection for the electronic card
3 Module reference marking (a label is also visible on the right-hand side of the module)

BMXCRA31200 *BMXCRA31210*

Modicon X80 CRA Ethernet drop adapters *(1)(2)*

Presentation

A Quantum EIO architecture with Modicon X80 EIO drops requires the use of a dedicated CRA drop adapter in each Modicon X80 drop:
- "Standard" drop adapter **BMXCRA31200** (capacity, see below)
- "Performance" drop adapter **BMXCRA31210** (capacity, see below)

These drop adapters are connected by Ethernet cordsets equipped with RJ45 connectors. The dual Ethernet network connection port on each drop adapter allows daisy chain loop connections using the RSTP protocol (Rapid Spanning Tree Protocol).

Each module uses one slot in the Modicon X80 rack.
The **BMXCRA31210** adapter is also available in a conformal coating version for harsh environments.

Capacity of Quantum EIO architectures with Modicon X80 EIO

- 1 Quantum CPU drop that can have one primary rack and one secondary rack *(3)*, equipped with a **140CPU6●●●●** advanced CPU
- With **140CPU651●●** standard CPUs and the **140CPU67160** HSBY CPU:
  - Up to 16 Modicon X80 EIO drops, limited to a maximum of 31 EIO drops (Quantum + Modicon X80)
- With the **140CPU65260** standard CPU and **140CPU6726●** HSBY CPUs:
  - Up to 31 Modicon X80 EIO drops, limited to a maximum of 31 EIO drops (Ethernet Quantum and Modicon X80)
- Each Modicon X80 EIO drop can comprise one primary rack and one secondary rack *(3)*
- Distance:
  - 100 m/*328 ft* between stations (copper medium)
  - 2 km/*1.25 mi* between Modicon X80 drops, with **BMXNRP0200** multimode fiber optic repeaters
  - 16 km/*9.94 mi* between Modicon X80 drops, with **BMXNRP0201** single-mode fiber optic repeaters

Description

1. Display block indicating the module status
2. Rotary switches for addressing EIO drops (00…159)
3. On **BMXCRA31210** module: dedicated RJ45 SERVICE port for remote service tools such as a PC, an HMI terminal, or Ethernet DIO devices (identical to the SERVICE port on Quantum CRP/CRA modules, see page 2/6)
4. RJ45 DEVICE NETWORK port for connection to the Ethernet network
5. RJ45 DEVICE NETWORK port for connection to the Ethernet network

(1) For additional characteristics, see our website www.schneider-electric.com.
(2) Requires Unity Pro Extra Large software ≥ V7.0.
*(3) Requires two **BMXXBE1000** rack expansion modules (one in the primary rack and one in the secondary rack) and a **BMXXBC●●●K** extension cable (0.8, 2, or 28 m/2.62, 6.56, or 92 ft) for connecting these two modules (see page 2/8).*

Modicon X80 modules platform
CRA Ethernet drop adapters

BMECRA31210

Modicon X80 performance EIO adapter

Presentation

An M580 Ethernet RIO (EIO) architecture with Modicon X80 I/O drops requires the use of a dedicated adapter in each Modicon X80 drop.

The **BMECRA31210** adapter supports Ethernet and X-bus communications across the remote backplane.

This EIO adapter module supports several expert modules such as counter and weighing modules and CCOTF (change configuration on the fly).

For Modicon X80 RIO drops on an Ethernet backplane, time-stamping can be managed with a resolution of 10 ms when using a **BMECRA31210** performance EIO adapter.

Only one **BMECRA31210** module can be installed per Modicon X80 RIO drop.

This module can also support a BMXXBP●●00 expansion rack.

The **BMECRA31210** adapter is designed to be installed on an Ethernet backplane in the main remote rack. The adapter supports the Modicon X80 I/O and partner modules with both Ethernet and X-bus connections *(1)*.

The keying pin on the rear side of the module means the **BMECRA31210** adapter cannot be installed on unsupported backplanes.

These adapters are connected by Ethernet cordsets equipped with RJ45 connectors. The dual Ethernet connection port on each adapter allows daisy chain loop connections using the RSTP protocol (Rapid Spanning Tree Protocol).

The **BMECRA31210** adapter is also available in a conformal coating version for harsh environments.

BMXNRP020●

Modicon X80 EIO drop fiber optic repeaters *(1) (2)*

Presentation

BMXNRP0200/0201 fiber optic repeaters offer an alternative to the use of ConneXium managed dual ring switches (DRS), for fiber optic communications over long distances in Ethernet I/O systems.
When inserted in Modicon X80 EIO drops, **BMXNRP0200/0201** fiber optic repeaters make it possible to:
- Extend the total distance of the EIO network when EIO drops are located in areas of the factory more than 100 m/*328 ft* away
- Enhance immunity to noise
- Resolve grounding incompatibilities between sites with different grounding methods

NRP repeaters can be installed on the primary ring or on secondary rings. These modules cannot, however, be used to connect secondary rings to the primary ring.
The **BMXNRP0200** repeater for multimode optical fiber allows remote location up to 2 km/*1.25 mi*.
The **BMXNRP0201** repeater or single-mode optical fiber allows remote location up to 16 km/*9.94 mi*.
Depending on the configuration, the NRP repeater may be linked to the CRA adapter of the drop where it is installed, via 1 or 2 Ethernet Interlink cables.

BMENOS0300

Ethernet network option switch

Presentation

The **BMENOS0300** Ethernet network option switch offers an economic alternative to external DRSs for copper Ethernet communication over short distances. Based on the rotary switches on the front panel, the application of the 2 device network ports can be configured intuitively as:

- RIO ring
- DIO ring
- DIO ports

Depending on the architecture, the **BMENOS0300** switch can be used to communicate with the distributed I/O by simply inserting it in the local main rack or remote drops.

Description

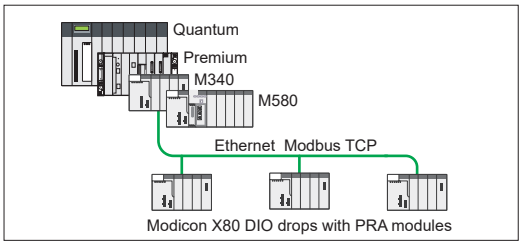
Modicon X80 modules platform
Peripheral remote I/O adapter



Modicon X80 DIO drops in a Quantum/Premium/M340/M580 I/O architecture using Ethernet Modbus TCP

Presentation

The peripheral remote I/O adapter (PRA) is dedicated to Modicon X80 DIO drops in a Quantum/Premium/M340/M580 I/O architecture using Ethernet Modbus TCP.
The BMXPRA0100 module manages a remote X80 I/O rack on Ethernet Modbus TCP which includes:
- discrete I/O modules
- analog I/O modules

It communicates by I/O scanning with the master PAC (Quantum/ Premium/M340/ M580).
In case of a redundant Ethernet link, the use of a BMXNOE0100 Ethernet module is necessary.

Principal characteristics

Primary racks per drop

Up to 4

Modicon X80 modules platform
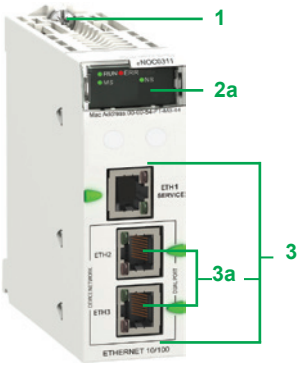
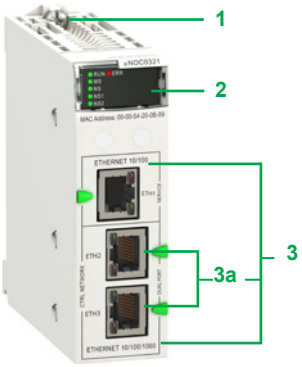
Modbus/TCP and EtherNet/IP network modules

BMENOC0301



BMENOC0311



BMENOC0321

Presentation

BMENOC03●1 network modules act as an interface between the M580 PLC and other Ethernet network devices via the Modbus/TCP and EtherNet/IP communication protocols.

BMENOC03●1 network modules are standard format and occupy a single slot in the rack of the Modicon M580 platform. They have to be installed in the main Ethernet + X-bus backplane rack.

Functions

BMENOC03●1 modules offer the following functions:

- Modbus/TCP and EtherNet/IP protocols operating simultaneously
- Ring topologies on 2 Ethernet ports using RSTP (Rapid Spanning Tree Protocol)
- Priority of Ethernet packets using QoS (Quality of Service) service
- Automatic module configuration recovery using FDR (Fast Device Replacement)
- Embedded Web server for application monitoring and module diagnostics (this is an HTML5 Web server, which means it can be read by any device (PC, tablet, smartphone) with the majority of operating systems (Android, iOS, Windows))
- Sharing data between PLCs (“local slaves” function)
- Network management using SNMP (Simple Network Management Protocol)

Description

The front panel of **BMENOC03●1** modules features:

1 A screw for locking the module in a slot in the rack

2 A display block with 4 LEDs:

- RUN LED (green): Operating status
- ERR LED (red): Error detected
- MS LED (green/red): Module status
- NS LED (green/red): Network connection status

Additionally for **BMENOC0321** modules, 2 LEDs are displayed as:

- NS1 LED (green/red): Ethernet network status
- NS2 LED (green/red): Ethernet network status

3 3 RJ45 connectors for connection to the Ethernet network (the 2 bottom connectors **3a** support ring topologies (RSTP protocol))

Each RJ45 connector has 2 associated LEDs:

- LNK LED (yellow): Ethernet link established
- ACT LED (green): Transmission/reception activity

Modicon X80 modules platform
Modbus/TCP and EtherNet/IP network modules

Example of BMEP58 and NOC module combination: BMEP581020/BMENOC0301/BMENOC0301

FactoryCast

BMENOC0311/BMENOC0321 FactoryCast modules provide additional web-based visualization of ePAC diagnostics and system data, such as:
- Custom web pages: allow the user to define a personalized interface
- Rack Viewer: provides a graphical representation of the configured ePAC system including all modules and I/O status
- ePAC Program Viewer: provides a web-based view of the EcoStruxure Control Expert *(1)* program code that animates logical states and variable values
- Customizable dashboard: allows a customized widget to be added to provide an optimum overview of the process data
- Trend Viewer: provides a graphical visualization of the variables
- Easy brand labeling: the website logo and colors can be ajusted online

Embedded router

The **BMENOC0321** embedded router provides bridge transparency from the control network to the device network and connectivity with functions such as:
- Embedded IP forwarding: enables communication from the control network to PACs, PLCs, PCs, HMIs, etc.
- IPSec feature: applicable when the IP forwarding function is disabled
- Time synchronization: to be able to synchronize with external time servers and update the internal clock
- SMTP (Email): to send messages and alerts about the ePAC system
- Embedded switch in the M580 platform: provides a direct connection to the processor without any cable, and no separate power supply is required
- Fast Device Replacement service
- Multiple diagnostics: supports advanced web pages to FactoryCast, MB Diagnostics, EIP Diagnostics, CNM (ConneXium Network Manager)

Combination of Ethernet modules and BMEP58 CPU

It is possible to combine Ethernet modules with the Modicon M580 CPU in order to increase its connectivity *(2)*.
In this example, the 3 NOC EtherNet/IP, Modbus/TCP network modules **2** are linked to the BMEP58●0●0 CPU module **1**:

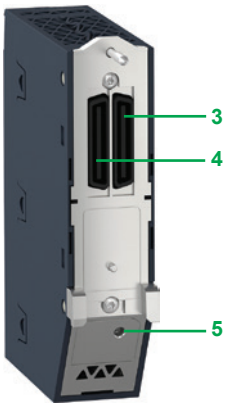
1 **BMEP581020** CPU
2 **BMENOC03●1** EtherNet/IP, Modbus/TCP network module

(1) EcoStruxure Control Expert software continues the Unity Pro range of software and corresponds to versions ⩾ 14 of Unity Pro.
*(2) For each M580 processor, up to 2 **BMENOC0321** modules can be integrated in the same rack.*

Modicon X80 modules platform
OPC UA module

Front view

BMENUA0100



Rear view

Presentation

The **BMENUA0100** OPC UA module is an Ethernet communications module with an embedded OPC UA server for communication with OPC UA clients, including SCADA. It brings high-performance OPC UA capabilities to Modicon M580 ePAC systems via the Modicon X80 I/O platform.

OPC UA (Open Platform Communications Unified Architecture) is a modern, secure, open, reliable standard for industrial communications. It defines a common infrastructure model to facilitate information exchange for industrial processes, including information context via meta-data, helping to ensure open interoperability, eliminating engineering repetition, simplifying system configuration, and reducing maintenance overhead.

Description

1 LED array
2 Control port with Ethernet link and activity LEDs
3 Ethernet backplane port
4 X-bus backplane port
5 Cybersecurity mode rotary switch. The three switch positions are:
- Secured
- Standard
- Security reset

The **BMENUA0100** module can be installed in any X80 Ethernet backplane slot in the head rack of a Modicon M580 ePAC system.

Features

The OPC UA module is available in two designs:
- **BMENUA0100** for standard environments
- **BMENUA0100H** for harsh environments

The module includes the following features:
- Cybersecurity: Improved security by design features including encrypted firmware, network isolation, IPSEC integration, and full implementation of OPC UA cybersecurity features.
- Scalable performance: The module is designed to provide scalable performance from low bandwidth IIoT connectivity through to highly demanding operational SCADA connections with thousands of monitored variables without impacting M580 CPU scan rate.
- Simplified engineering: Integrated access to M580 ePAC data dictionary including simple or structured data types, online variable changes with no break in system communications and advanced, predefined diagnostic information.

OPC UA services

- Server Stack services (read/write, browse, call, publish, etc.)
- Server Stack Data Access Services
  - Data Access Server Facet
  - ComplexType 2017 Server Facet
  - Core 2017 Server Facet
- Server Stack Discovery and Security Services
- Server Stack Publish and Subscribe Services
- Server Stack Transport Services

Modicon X80 modules platform
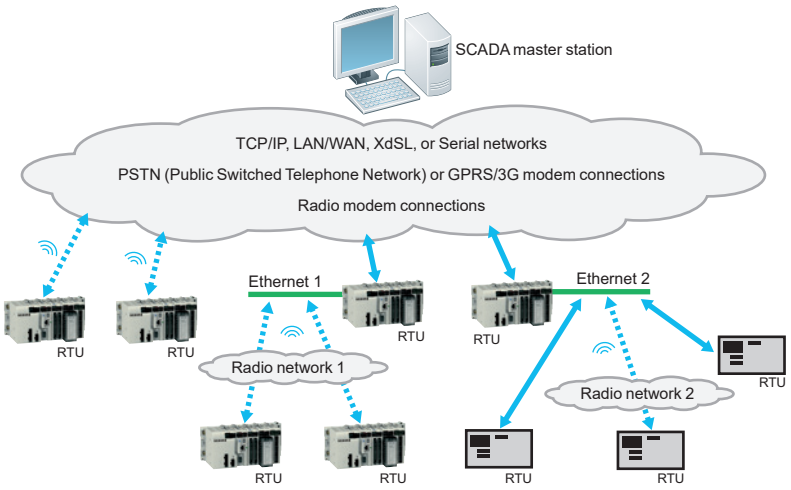
RTU communication

Presentation

RTU protocols and Telemetry systems provide a robust means of communication suitable for the process values, maintenance, and remote monitoring needs of infrastructures disseminated over a vast geographical area that may be difficult to access.

RTU systems are designed to meet the needs of the water industry, the oil and gas sector, and other infrastructures, where remote monitoring and telecontrol are essential to the effective management of sites and substations spread over a wide geographical area.

An RTU system consists of the following elements:
- A Telemetry Supervisor (SCADA) in a central control room
- A network infrastructure and a variety of suitable communication methods (LAN, WAN, modems, etc.)
- A large number of RTU substations geographically distributed throughout the field



Example of an RTU system architecture

RTU communication protocols

Currently, people working in the industrial Telemetry sectors use standard protocols for communication between control centers (SCADA) and RTU stations.

The most commonly used protocols are as follows:
- IEC 60870-5: IEC (International Electrotechnical Commission), in particular IEC 60870-5-101/104 (commonly known as IEC 101 or 104)
- DNP3: Distributed Network Protocol version 3

DNP3 is the predominant protocol in North America, Australia, and South Africa whereas, in certain European countries, the IEC protocol is required by law. IEC is also commonly used in the Middle East.

The geographical distribution of these protocols is as follows:
- DNP3: North America, Australia, New Zealand, UK, Asia, South America, etc.
- IEC 60870-5: Europe, Middle East, Asia, South America, etc.

These protocols offer similar functions.
They are both particularly suited to “transient communications” (modem, radio) and data exchanges with limited bandwidth for the following reasons:
- They transfer data in a very robust manner between the SCADA system and the RTU devices
- They are essentially “event-triggered” protocols (exchanges on changes of state, exchanges of time- and date-stamped events).

They offer the following transmission modes:
- Interrogation via polling
- Data exchanges on changes of state (RBE: report by exception)
- Unsolicited messaging (a slave station can start an exchange of data with the master station)

Both protocols offer native data management and time- and date-stamped events:
- Time synchronization between the master station and auxiliary stations via protocol functions
- Time- and date-stamping of data and events
- Automatic transfer of time- and date-stamped events between the RTU stations and SCADA (control room)

Main functions

The main RTU system functions are as follows:

■ Remote communications:
□ Between remote RTU sites (coordination, synchronization)
□ With the SCADA host system, controlling the central operator station (monitoring, alarm reports) and centralized databases (archiving of alarms or events)
□ With the on-call staff (alarm indication)
□ With the technical station (diagnostics, maintenance)

■ Data acquisition, processing, and memorization:
□ Process data sampling using standard or dedicated sensors, validation
□ Exchange of data with other devices within the station, including controllers and operator consoles
□ Use of discrete or analog I/O, serial links, fieldbuses, and LANs
□ Event detection, time- and date-stamping, prioritization, and logging as required by the application

■ Other functions:
□ IEC 1131-3 programmable control: forcing, access control, load sharing, servo control
□ Data logging
□ Alarm and report notification by e-mail/SMS
□ Web HMI: displaying the process, alarm handling, trend analysis, telecontrol
□ High reliability with hardened and ATEX range

■ Advanced RTU systems also feature (see page 5/20):
□ Cybersecurity functions
□ Simplified architecture (one single controller to manage both process and RTU)
□ Integrating RTU DTM in Control Expert for easier configuration

Two RTU communication modules are included in Schneider Electric offer with the following characterictics :

Features	BMENOR2200H Step 1	BMXNOR0200H
Platform support	M580	M340, M580

SD card availability *(2)*	Optional	Mandatory
Event buffer size	150,000 + 40,000 *(3)*	100,000
Maximum input data	8,000 bytes	7,000 points
Maximum output data	8,000 bytes	7,000 points
Data attribution	Unlocated *(4)*	Located/Unlocated
Strings exchange in DNP3	Supported	No
DNP3 SA key method	Pre-shared key	No
DNP3 secure statistics	Yes	No

(1) The BMENOR step 1 module will be improved later to step 2 to include more functions than the BMXNOR. The step1 to step 2 update will be achieved by upgrading the firmware and DTM.
(2) The SD card is only used for the data logging feature (step 2).
(3) 40,000 event buffer used for DNP3 SAv5 security statistics events.
(4) When the user selects "On-Demand" mode for AO/BO point in DNP3 outstation, the value will be generated as a located variable.

Modicon X80 modules platform
RTU module

Presentation

The **BMXNOR0200H** communication module integrates the RTU (remote terminal unit) functions and protocols in the Modicon X80 I/O platform for industrial telemetry applications and other widely distributed infrastructures.

The **BMXNOR0200H** module can be used to connect an RTU X80 I/O PLC directly to a telemetry supervisor or to other RTU stations, via the standard DPN3 protocols (subset level 3) or IEC 60870-5-101/104 with different connection methods: Ethernet TCP/IP, LAN, WAN, serial link, or modem connections (radio, PSTN, GSM, GPRS/3G, ADSL).

The **BMXNOR0200H** module is designed to operate in a harsh environment (conformal coating), in an extended temperature range (-25 to +70 °C/*-13 to +158 °F*).

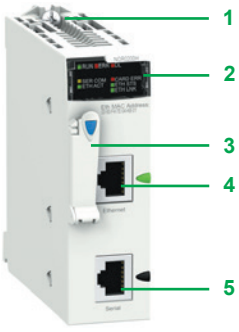
Functions

The **BMXNOR0200H** module offers the following functions:
- Upstream RTU communication to the SCADA (server or slave mode)
- Downstream RTU communication to field devices (master mode)
- RTU protocols: Time synchronization, exchanges of time- and date-stamped data via polling (on change of state and unsolicited), management of time- and date-stamped events
- Application data logging with time- and date-stamping in the module Flash memory card
- Event notifications via e-mail or SMS
- Embedded Web server for setting the RTU protocol parameters, diagnostics, and monitoring

- Communications on Ethernet port:
  - 10BASE-T/100BASE-TX physical interface
  - Modbus/TCP protocol (client and server)
  - Integrated RTU protocols for Ethernet communications: DNP3 IP (client or server) and IEC 60870-5-104 (over IP) (client or server)
  - Connection of ADSL external modem on the Ethernet port, via the PPPoE (Point-to-Point Protocol over Ethernet) protocol
  - Advanced Ethernet functions: NTP client, FTP client or server, HTTP server, SOAP/XML server, SNMP agent, SMTP agent

- Communications on serial port:
  - Isolated RS232/RS485 point-to-point serial links
  - Integrated RTU protocols for serial and modem communications: IEC 60870-5-101 (master or slave) and DNP3 serial (master or slave)
  - Connection of external modems (radio, PSTN, GSM, GPRS/3G) via the PPP (Point-to-Point Protocol) protocol

Description



The **BMXNOR0200H** module can be installed in either a standard or “ruggedized” configuration, equipped with a standard **BMXP34●●●●● /BMEP58●●●●** or “ruggedized” **BMXP34●●●●●H/BMEP58●●●●H** processor.

The front panel of the **BMXNOR0200H** module features:
1. A screw for locking the module in a slot in the rack
2. A display block with 8 LEDs, 4 of which relate to the serial and Ethernet communication ports
3. A slot for a Flash memory card (SD card), with protective cover
4. An RJ45 connector for connection to the Ethernet network
5. An RJ45 connector for connection of the serial link or an external modem

On the rear panel, 2 rotary switches for selecting the IP address assignment method for the module.

Compatibility: page 1/8 | Racks and power supply modules: page 2/2 | I/O modules: page 3/2 | Ruggedized modules: page 6/2

Modicon X80 modules platform
Advanced RTU module

Presentation

The **BMENOR2200H** Advanced RTU module is a communication module fully based on the Schneider Electric Ethernet backbone to address advanced use cases and complex configurations and reach new levels or architecture connectivity and simplicity:

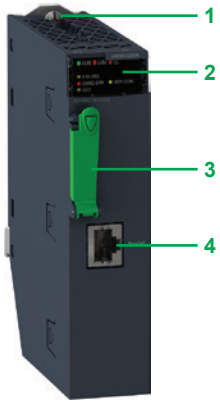
- Optimum level of cybersecurity is reached from RTU protocol (DNP3 secure) to global Schneider architecture (RBAC).
- Configuration, operating mode, and diagnostics are fully integrated inside EcoStruxure Control Expert. Cybersecurity settings are configured on embedded web page based on HTTPS.

The **BMENOR2200H** module is designed to operate in large infrastructures such as pipelines, power generation plants, and transportation. It supports harsh environments (extended temperature range: -25 to +70 °C/*-13 to +158 °F*).

Functions

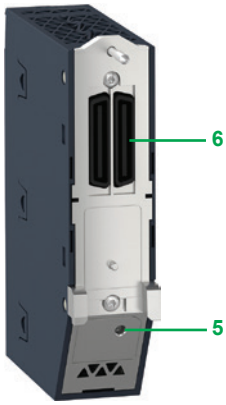
BMENOR2200H features the following key functions:

- DNP3 Net SAv2/5 by pre-shared key, Server/Client
- System log for cybersecurity
- Time synchronized by CPU or RTU protocol
- Web page (HTTPS) for diagnostics and cybersecurity setting
- SNTP Client
- SNMP Agent
- RBAC Management
- Secure firmware download
- Sequence of Events (SOE)
- Modbus TCP Client/Server
- Other enhanced cybersecurity functions:
  - Enhanced password policy and login policy
  - System hardening, server services can be disabled/enabled
  - Rotary switch for selecting secure mode/standard mode
  - Secure boot



Front view

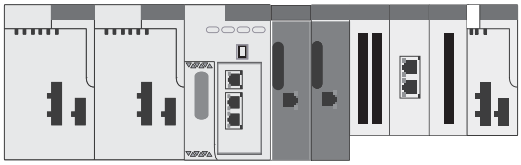
BMENOR2200H



Rear view

Description

BMENOR2200H is installed on an Ethernet rack only (supports up to 4 Advanced RTU modules per CPU, based on different CPU levels).



The front panel of the **BMENOR2200H** module presents:

1. A screw for locking the module in a slot in the rack
2. A display block with 7 LEDs (hardware diagnostic information: RUN, detected error, download firmware, serial data status, detected SD Card error, Ethernet communication status, cybersecurity status)
3. A slot for a Flash memory card (4 GB SD card), with green protective cover *(1)*
4. A RJ45 serial port supporting RS485 and RS232 *(2)*

The back panel of the **BMENOR2200H** module features:

5. A rotary switch for cybersecurity (Secure mode, Standard mode and Reset) (a dedicated screwdriver is shipped in the box from factory)
6. A dual port for X-bus and Ethernet communication

(1) SD Card is only used for data logging feature, not implemented yet.
(2) Not implemented yet; dust cover is provided.

Modicon X80 modules platform
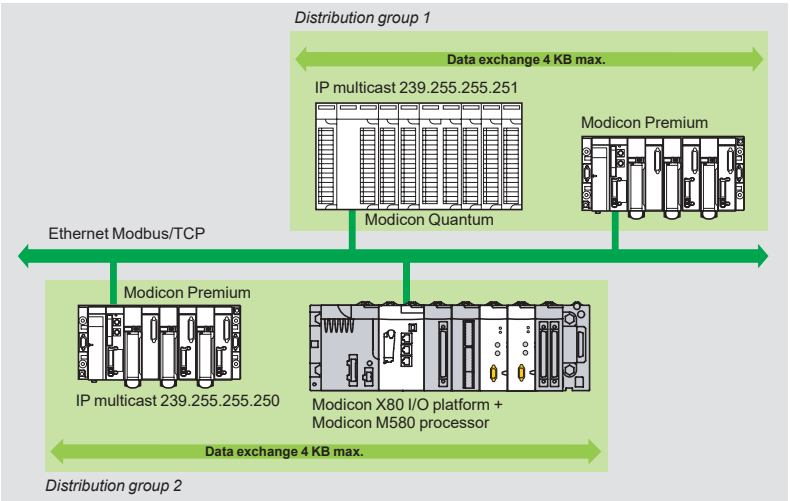
Ethernet Global Data module

Presentation

Global Data service



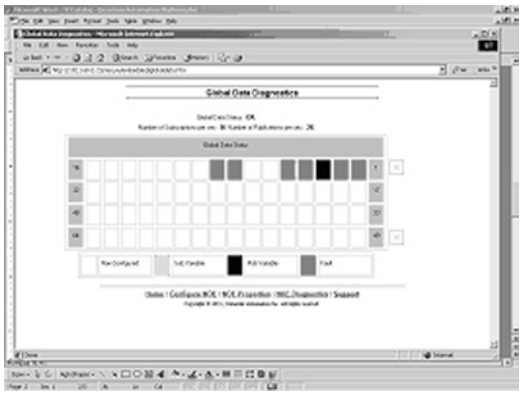
The Global Data service performs data exchanges in real time between stations belonging to the same distribution group. It is used to synchronize remote applications, or to share a common database between a number of distributed applications. Exchanges are based on a standard producer/consumer protocol, helping to ensure optimum performance with a minimum load on the network. This RTPS (Real Time Publisher Subscriber) protocol is promoted by Modbus-IDA (Interface for Distributed Automation), and is already a standard adopted by several manufacturers.

Characteristics

A maximum of 64 stations can participate in Global Data within a single distribution group. Each station can:

- Publish one 1024-byte variable. The publication rate can be configured between 10 ms and 1,500 ms in increments of 10 ms.
- Subscribe to between 1 and 64 variables. The validity of each variable is controlled by health status bits linked to a refresh timeout configurable between 50 ms and 15 s. Access to an element of the variable is not possible. The total size of subscribed variables amounts to 4 K contiguous bytes.

To further optimize the performance of the Ethernet network, Global Data can be configured with the “multicast filtering” option which, together with switches in the ConneXium range, broadcasts data only to Ethernet ports where there is a Global Data service subscriber station. If these switches are not used, Global Data is sent in “multicast” mode to all switch ports.



Global Data diagnostics

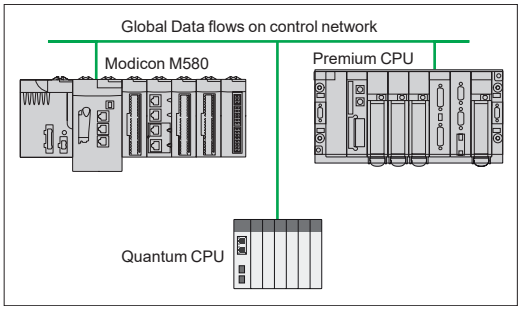
Global Data service diagnostics

The diagnostic screens use a color code to show the Global Data status:

- Configured/not configured/detected fault
- Published/subscribed

Global Data service diagnostics can be performed in one of four ways:

- Via the application program from a specific PLC data zone
- From the setup software debug screen
- From the PLC system diagnostic function displayed by means of a Web browser on a PC station
- Using standard SNMP manager software



Example of architecture to implement BMXNGD0100

BMXNGD0100

Description

BMXNGD0100

The **BMXNGD0100** Ethernet Global Data module is specifically designed to modernize the large and complex Modicon installed base (mainly Premium and Quantum) by running the Global Data service more easily.

In addition to the Global Data service, the **BMXNGD0100** module also has the following embedded services, as it can also be used for inter-controller communication to provide solutions for complex processing and high-end applications:

- Ipconfig
- Modbus TCP explicit messaging (client and server)

Designed as a neat solution specifically for the Global Data service, some services, such as IO-Scanner, Web, FDR, and NTP, are not supported by the **BMXNGD0100** module. This module is only compatible with **BMEXBP●●●●** Ethernet racks in standalone architectures on the X80 platform, to keep the global data transferring internally only, isolated from the external world to help ensure a strict level of cybersecurity.

If these functions are required, please check with our Customer Care Center for alternative products that can fulfill these needs.

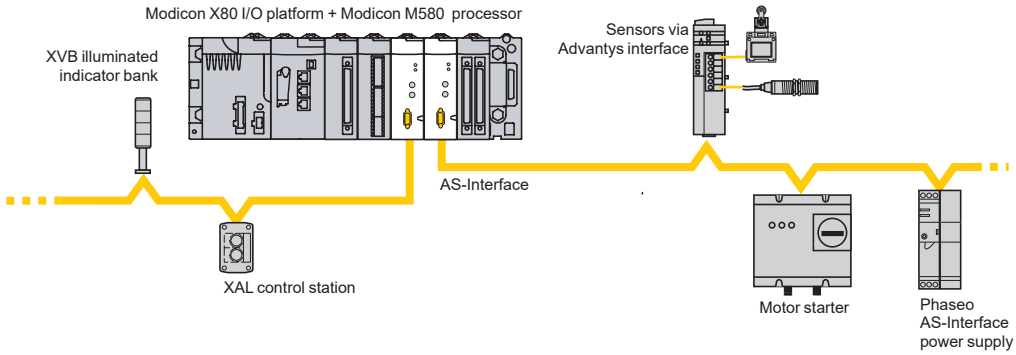
Modicon X80 modules platform
AS-I master module

Presentation

The **BMXEIA0100** master module for AS-Interface cabling system provides the AS-Interface system master function for the Modicon X80 I/O platform.



The AS-Interface cabling system consists of a master station (Modicon X80 I/O platform) and slave stations. The master supporting the AS-Interface profile interrogates the devices connected on the AS-Interface line one-by-one and stores the information (actuator/sensor status, device operating status) in the PLC memory. Communication on the AS-Interface line is managed totally transparently in relation to the application PLC program.

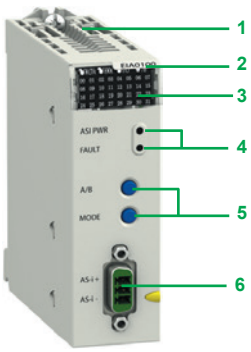
The **BMXEIA0100** master module supports the latest management profile for AS-Interface devices *(AS-Interface V3)*, which is able to manage level V1, V2, and V3 AS-Interface slaves:
- Discrete slave devices (up to 62 devices of 4 inputs/4 outputs organized in 2 banks (A/B) of 31 addresses each)
- Analog devices (up to 31 devices (4 channels) in bank A)
- Safety interfaces (up to 31 devices in bank A)

An AS-Interface power supply is essential for powering the various devices on the line. Ideally it should be placed near stations that consume a great deal of energy. Please refer to the “Phaseo power supplies and transformers - AS-Interface range” catalog.

A Modicon M340 Performance configuration with a **BMXP3420●0/20●02** processor or a Modicon M580 configuration with a **BMEP58●●●●** processor can take 4 **BMXEIA0100** modules. A Standard configuration with **BMXP341000** processor can take 2 **BMXEIA0100** modules.

Description

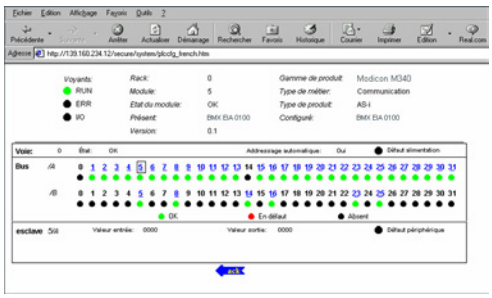
The **BMXEIA0100** AS-Interface master module is standard format (1 slot). Its housing provides IP20 protection of the electronics and it is locked into each rack slot (**01** ….**11**) by a captive screw.



BMXEIA0100

The front panel of the **BMXEIA0100** AS-Interface master module features:
1. A rigid body providing support and protection for the electronic card
2. A module reference marking
3. A display block with 5 LEDs indicating the module operating modes:
   - □ RUN (green): Module running
   - □ ERR (red): Detected module fault
   - □ A/B (green): Displays the group of 31 slaves
   - □ I/O (red): Detected I/O fault on AS-Interface line
   - □ 32 LEDs for diagnostics of the AS-Interface line and each slave connected on the line depending on the A/B pushbutton selection *(1)*
4. 2 LEDs marked ASI POWER and FAULT: AS-Interface external power supply present and detected AS-Interface line fault (see diagnostics on page 5/25)
5. Two pushbuttons marked A/B and MODE (see diagnostics on page 5/25)
6. A 3-way male SUB-D connector for the AS-Interface cable (female screw connector supplied)

(1) Depending on whether A or B is selected, this displays either the first 31 slaves (standard addressing) or the last 31 slaves (extended addressing).



Diagnostics

BMXEIA0100 module

The two LEDs **4** on the module front panel are used in conjunction with the two pushbuttons **5** for module diagnostics:

LEDs		Pushbuttons	
4 ASI PWR: AS-Interface power supply present	**4** FAULT: Detected AS-Interface line fault	**5** A/B: Selects the group of slaves on the display block **3**	**5** MODE: Module Offline/Online

The display block on the front panel of the **BMXEIA0100** master module can be used to perform simplified local diagnostics by displaying the slave devices present on the AS-Interface line.
Detailed diagnostics of each of the slave devices is also possible using:
- The **ASITERV2** adjustment terminal
- A Web browser using the Rack Viewer function in the standard Web server on the Modicon X80 I/O platform. For further information, please consult our website www.schneider-electric.com.

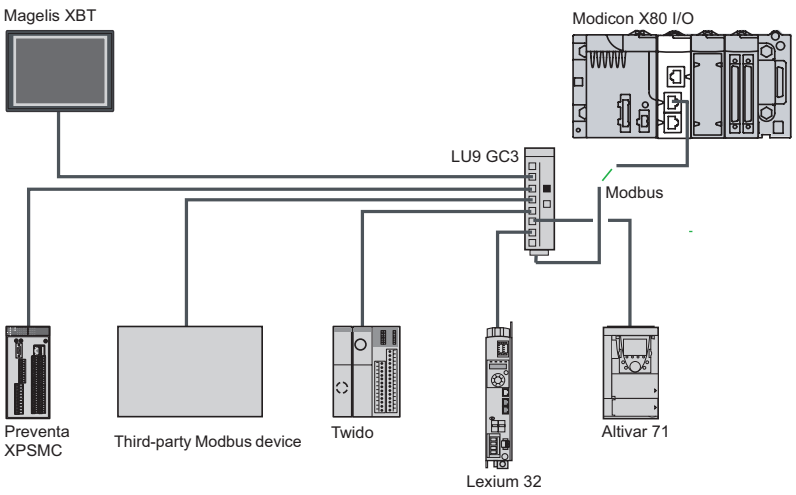
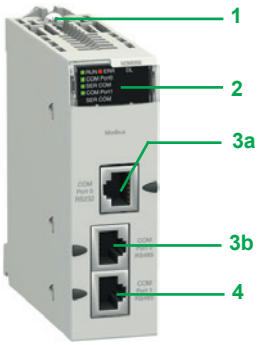
Modicon X80 modules platform
Modbus and Character mode serial links module

Presentation



The Modbus serial link is used for master/slave architectures (it is necessary, however, to check that the Modbus services used by the application have been implemented on all relevant devices).

The bus consists of a master station and slave stations. Only the master station can initiate the exchange (direct communication between slave stations is not possible). Two exchange mechanisms are available:
■ Question/response, where requests from the master are addressed to a given slave. The master then waits for the response from the slave that has been interrogated.
■ Broadcasting, where the master broadcasts a message to all slave stations on the bus. The latter execute the order without transmitting a reply.
■ It is necessary to use **BM●CRA31210** modules as drop adapters. On one drop it is possible to plug a maximum of two **BMXNOM0200** modules.
The following services are not available in the slave stations:
□ Modbus slave
□ Modem services
Although most processors have a serial link that can support modems, the **BMXNOM0200** 2-channel serial link module is particularly recommended for this type of use.
Its performance and numerous parameter-setting options make it ideal for any type of configuration, especially when using radio modems.



BMXNOM0200

Description

BMXNOM0200 serial link module

The front panel of the **BMXNOM0200** serial link module features:
1 A screw for locking the module in a slot in the rack
2 A display block with 4 LEDs:
□ RUN (green) and ERR (red): Module status
□ For each of the two channels: SER COM (green): Activity on the serial link (lit)/ detected fault on a device present on the serial link (flashing)
3 Two RJ45 connectors (exclusive use) for connection of channel 0 (with black indicator):
□ **3a** A connector for RS 232C connection, marked COM Port 0 RS232
□ **3b** A connector for RS 485 connection, marked COM Port 0 RS485
4 An RJ45 connector for RS 485 connection of channel 1, marked COM Port 1 RS485, with black indicator

To be ordered separately:
RS 485 cordsets (refer to the “Modicon M580 automation platform” catalog available on our website www.schneider-electric.com) or RS 232 cordsets for DCE terminal (see page 5/27).

Complementary characteristics

The following characteristics complement those indicated in the selection guide on page 5/9.

BMXNOM0200 module serial links

- Physical interface:
  - RS 232 port 0: RS 232 8-wire, non-isolated
  - RS 485 port 0 and port 1: RS 485 2-wire, isolated
- Frame:
  - Modbus: RTU/ASCII, full duplex in RS 232, half duplex in RS 485
  - Character mode: full duplex in RS 232, half duplex in RS 485
- Data rate:
  - RS 232 port 0: 0.3...115 Kbps (Modbus/Character mode)
  - RS 485 port 0 and port 1: 0.3...57.6 Kbps (Modbus/Character mode)
- Line polarization:
  - Modbus RS 485: automatic
  - RS 485 character mode: configurable with EcoStruxure Control Expert *(1)* software
- Maximum length of a tap link in RS 485 2-wire:
  - 15 m/*49 ft* in a non-isolated link
  - 40 m/*131 ft* in an isolated link
- Expert mode (from version V1.2 of the module and version V5 of Unity Pro (1): used to configure the time out links individually from the application and thus adapt to the specific characteristics of certain modems.

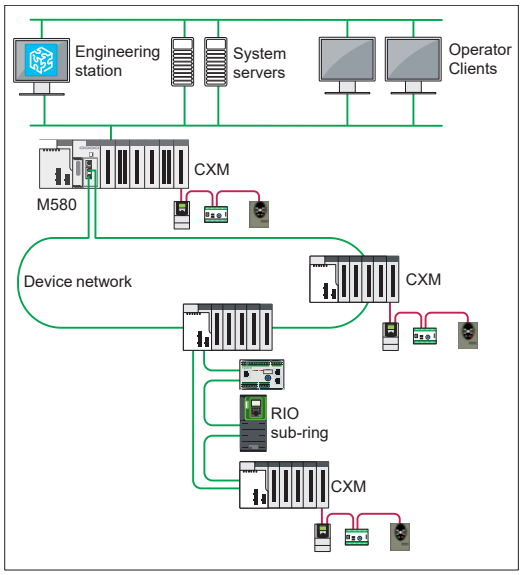
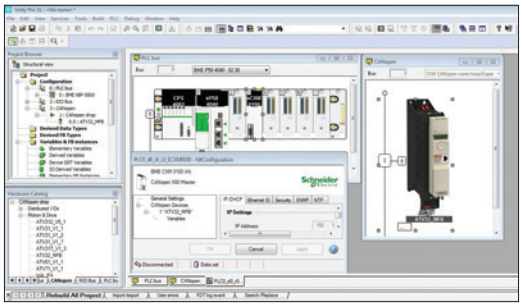
Modicon X80 modules platform
CANopen master module



Typical topology to connect CANopen devices to M580/X80 platforms with BMECXM0100



CANopen configuration in Unity Pro with BMECXM0100

Presentation

CANopen is an open network supported by more than 600 companies worldwide, and promoted by CAN in Automation (CiA). With the general acceptance of CANopen, Schneider Electric has the accumulated and proven experience of applying CANopen in machine solution platforms.

CANopen helps to ensure reliable and deterministic access to real-time data in field devices. As a consequence, products using CANopen are increasingly used in control system architectures. The **BMECXM0100** CANopen master module provides powerful access to the CANopen slaves from the M580 local rack or a remote X80 drop.

Advantages

BMECXM0100 is designed to fulfill customer needs by offering the following advantages:

- ■ Operational intelligence:
  - □ Complete software integration into Unity with a predefined catalog of preferred devices and numerous automated operations such as device variable creation, IP/DHCP settings, and IO scanner configuration
  - □ Simple integration of third-party devices
- ■ Maintenance excellence:
  - □ Robust and well-designed with a long life cycle following X80 standards
  - □ Built to withstand extreme temperatures (-25 ºC to +70 ºC/*-13 ºF to +158 ºF*), ATEX certified
  - □ Easy diagnostics by maintenance engineers via a simple Web browser (no need for Unity) and the FDR (Fast Device Replacement) service
- ■ Investment protection: Totally flexible topologies with the possibility of using several **BMECXM0100** modules in a single M580, or in a remote I/O drop closest to the process
- ■ Time-to-market: Simple, compact size, all in one, which reduces installation time
- ■ Enhanced protection and security: Integrated cybersecurity design helps to protect plant operations

Description

The **BMECXM0100** CANopen X80 master module is standard format (1 slot) and supports one CANopen port (SUB-D9 male connector).

The **BMECXM0100** supports up to 63 slaves with a maximum process image size of 4 Kbytes IN/4 Kbytes OUT.

Standardized baudrates between 20 Kbd and 1 Mbd (20 Kbd, 50 Kbd, 125 Kbd, 250 Kbd, 500 Kbd, 1 Mbd) are supported.

Depending on the performance level required by the process, the **BMECXM0100** module can be scanned by the RIO or the DIO scanner of the M580 CPU. RIO scanning helps to ensure optimum performance, in sync with the PLC task (MAST, FAST or AUX).

Several BMECXM modules can be connected to the same or different I/O scanners in the same M580 PAC.

BMECXM0100 modules are not compatible with redundant M580 architectures, and cannot be scanned by an Ethernet module including **BMENOC03●1** and **BMXNOC0402**.

Third-party CANopen slaves can only be configured in **BMECXM0100** modules from their EDS description files and via the hardware catalog manager. They cannot be configured from their DTM. Communication between the device and its DTM over Ethernet IO is also not supported.

Modicon X80 modules platform
CANopen master module

BMECXM0100

Diagnostics

BMECXM0100

The 5 LEDs **1** on the module front panel are used for quick CANopen communication diagnostics:

LED	Color	Description
I/O	Red	Indicates the exchange status with CANopen devices
BS (Bus Status)	Red / Green	Indicates the EtherNet/IP connection status
	Yellow	Firmware upgrade in progress
CAN RUN	Green	Indicates the status of the CANopen fieldbus
CAN ERR	Red	Indicates the status of the CANopen physical layer and indicates detected errors due to missing CAN messages (SYNC, node-guarding, or heartbeat)
CAN COM	Yellow	Dedicated to SDO transmission

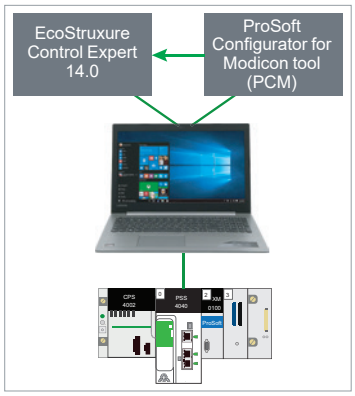
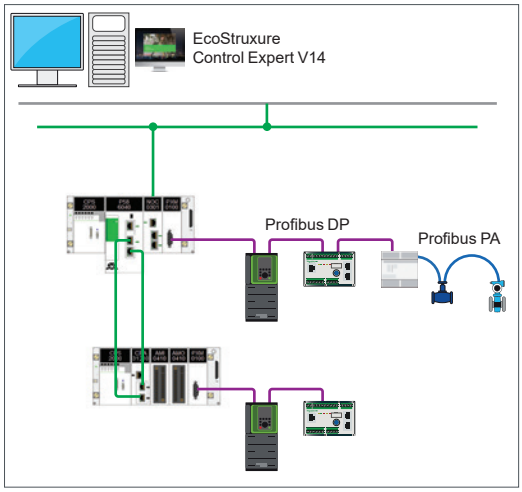
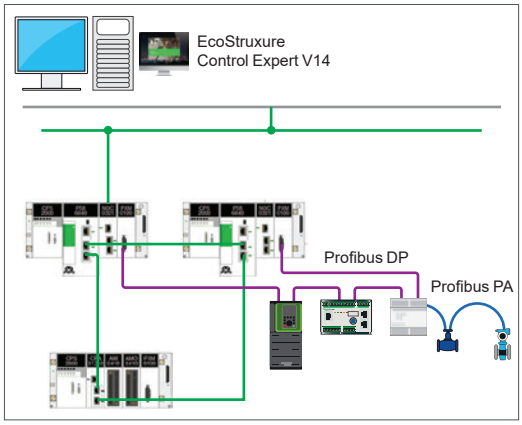
Modicon X80 modules platform
Profibus DP master module



Interaction between EcoStruxure Control Expert, Prosoft Configurator for Modicon (PCM tool), and PMEPXM0100 Profibus DP master X80 module



Standalone topology to connect Profibus DP master X80 module to M580/X80 platforms with PMEPXM0100



Redundant (HSBY) topology to connect the Profibus DP master X80 module to M580/X80 platforms with PMEPXM0100

Presentation

Overview

The X80 Profibus DP master module allows the user to integrate Profibus DP slave devices into Schneider Electric's M580 control system to exchange process, alarming, and diagnostic data with Profibus DP devices as well as to provide configuration and asset management of slave devices using Device Type Managers (DTMs).

This is an advanced in-rack solution for your Profibus system compliant with Hot Standby (HSBY) and Standalone common Safety architectures.

New versions of M580 CPU and BMECRA31210 firmware and software are necessary to operate the module:
- CPU version ≥ V2.80
- BMECRA31210 version ≥ V2.40 if the module is used in a remote drop
- EcoStruxure Control Expert ≥ V14
- ProSoft Configurator for Modicon tool (PCM)

Advantages

The X80 Profibus DP master module is designed to fulfill customer needs by offering the following advantages:
- High performance, with up to 125 slave devices behind one module (2 Kb IN/2 Kb OUT), and up to 10 Profibus Masters in one M580 configuration
- Real-time Profibus network analyzer with packet capture tool: accelerates the troubleshooting phase, fine tunes network options, and anticipates any maintenance needs
- Simple and ergonomic ProSoft Configurator for Modicon (PCM) with easy import into EcoStruxure Control Expert to efficiently build the Profibus architecture
- Easy modernization from Quantum PTQ, user-friendly interface
- Achilles Level 2, HTTP, SNMP, Access control & Sys Log

Description

X80 Profibus DP master module is a Profibus DP V1 master class 2 X80 module that can be plugged in the M580 local rack or in any remote drop supporting the M580 Ethernet backplane depending on the architecture. It has an Autoscan feature to automatically discover and configure all the active slaves connected to the bus.

The PROFIBUS Communication DTM library is provided to enable the module interface by PROFIBUS Asset Management Tools.

"On the fly" operations, such as changing parameters or adding a new device online, are allowed.

The module is refreshed based on the RPI values, asynchronous to the periodic tasks. This refreshment is achieved via the Mast task with limited impact on the task duration, which is proportional to the device number.

The X80 Profibus DP master module can be scanned by the M580 CPU as well as by any Ethernet module (BMENOC●●●●). Nevertheless, the CPU capacity (mainly memory) is designed to be capable of managing all X80 Profibus Master modules installed in the configuration. This simplifies the architecture and the process of modifying slave parameters via the "on the fly" feature, as well as that of adding new devices.

An advanced operating mode provides the option to stop the module while the PLC is in RUN in order to manage any modification without stopping the process.

Architecture

The **PMEPXM0100** Profibus DP master X80 module can be integrated into two types of architecture:
- Standalone:
  - Local racks and remote racks
  - Up to 6 modules in one configuration for high-end M580 CPU
  - Common Safety
- Redundant (HSBY):
  - Local rack only
  - Up to 6 modules in each rack for high-end M580 CPU

Modicon X80 modules platform
Profibus DP master module

ProSoft Configurator for Modicon tool (PCM)

ProSoft Configurator for Modicon tool (PCM)

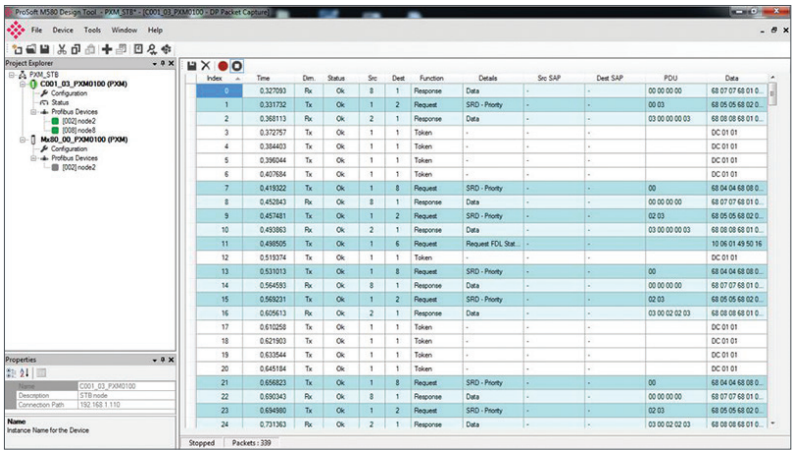
The following are required to configure the **PMEPXM0100** X80 Profibus DP master module:

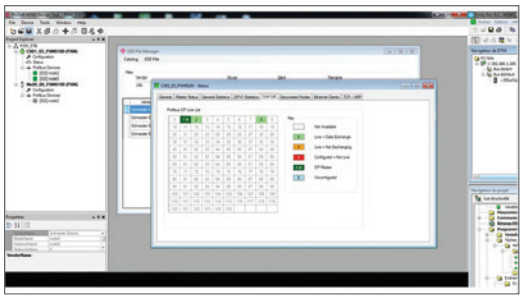
- EcoStruxure Control Expert V14
- ControlExpert_V140_HF_PMEPXM0100
- ProSoft Configurator for Modicon tool (PCM)

There is a strong interaction between EcoStruxure Control Expert and the Prosoft Configurator for Modicon (PCM). The ProSoft Configurator for Modicon tool (PCM) also gives the finest level of information and diagnostics on the module, on the bus, and on all the slaves. This tool is available at no additional cost on the Schneider Electric website in the product page section.

The X80 Profibus DP master module is integrated from EcoStruxure Control Expert V14, with high-level services:

- It is included natively in the EcoStruxure Control Expert *(1)* hardware catalog
- Exhaustive Device DDT for advanced control and diagnostics





PMEPXM0100 status monitoring - Live List

Diagnostics and monitoring

PMEPXM0100

The 7 LEDs on the module front panel are used for quick Profibus DP fieldbus communication diagnostics.

The X80 Profibus DP master module provides a range of statistics that can assist with module operation, maintenance, and fault finding. The statistics can be accessed by the Prosoft Configurator for Modicon or via the Web server embedded in the module.

IEC 61850 module

Presentation

IEC 61850 is the latest worldwide standard for electrical utilities. It covers information modeling, configuration language, and communication networks. Initially developed for communication in substations, implementation of the standard has advanced at a remarkable rate since its introduction, with huge numbers of IEC 61850 devices having been installed. Now considered to be the de facto standard for substation automation, it is encompassing an increasing number of new application areas, such as:

- Wind power (IEC 61400-25)
- Distributed energy resources (IEC 61850-7-420)
- Hydro power (IEC 61850-7-410)

The long-term active participation of Schneider Electric experts in IEC and UCA working groups has resulted in a state-of-the-art Schneider Electric IEC 61850 offer with full IEC 61850-8-1 functionality.
IEC 61850 with M580 helps reduce customer investment and operational costs by easily connecting their power device to the process systems.
M580 IEC 61850 helps to improve system reliability and security by:

- Getting the right data at the right time to be able to act proactively, thus increasing the reliability and availability of both the process and the power system
- Implementing robust M580 cybersecurity features to help ensure secure communication

Functionality

IEC 61850 MMS server, client, and GOOSE services can work in either Ed. 2.0 or Ed. 1.0 mode. M580 controllers support IEC 61850 standard engineering process and data objects. They also support the following data models:

- Substation automation systems (IEC 61850-7-4)
- Hydroelectric power plants (IEC 61850-7-410)
- Distributed energy resources (IEC 61850-7-420)

The **BMENOP0300** module from the Schneider Electric EcoStruxure platform is used to implement an engineering approach by enabling IEC 61850 compliant data exchange across industrial, energy, and power system applications. This offer helps our existing PLC customers from both process and energy applications to modernize smoothly and sustainably to the new IEC 61850 standard.

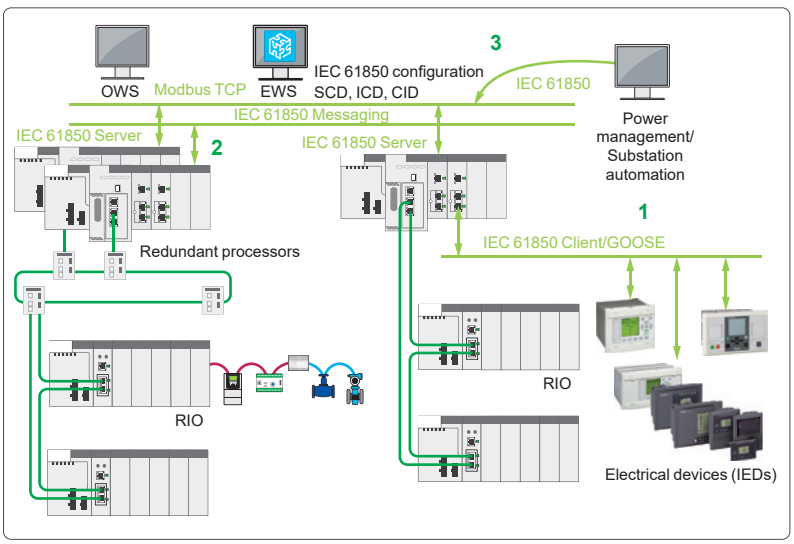
Application cases

The **BMENOP0300** module can provide different services under different roles, primarily in the following three areas:

1 Electrical device integration
   - IEC 61850 Client is used to communication with IEDs.
   - GOOSE is also possible.

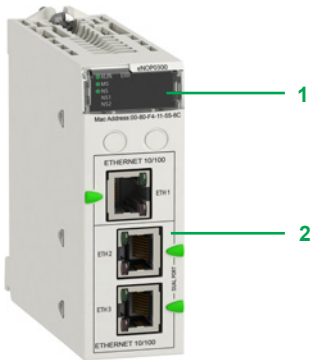
2 IEC 61850 based process control
   - Process control objects are modeled with IEC 61850 (hydro, DERs, etc.).
   - Server to SCADA and Client to IEDs is possible when needed.

3 M580 provides information to other systems.
   - IEC 61850 Server is used.



*Different services that **BMENOP0300** can provide*

Modicon X80 modules platform
IEC 61850 module



BMENOP0300

Description

The **BMENOP0300** IEC 61850 module is installed on the local Ethernet backplane of an M580 system.

The 6 LEDs on the front panel **1** are used to diagnose operating conditions:
- RUN LED (green): Operating status
- ERR LED (red): Error detected
- MS LED (green/red): Module status
- NS LED (green/red): Network connection status
- NS1 LED (green/red): Ethernet network status
- NS2 LED (green/red): Ethernet network status

With three Ethernet ports **2** to link external intelligent electrical devices (IEDs), the module provides interfaces for IEC 61850 communication as well as device management software that utilizes the IEC 61850 standard *(1)*.

The maximum number of **BMENOP0300** modules that can be mounted on a local rack is determined by the M580 processor model:

Standalone processor model	**BMEP581020** **BMEP582020** **BMEP582040**	**BMEP583020** **BMEP583040**	**BMEP584020** **BMEP584040** **BMEP585040** **BMEP586040**
High-availability processor model	**BMEH582040**		**BMEH584040** **BMEH586040**
Maximum number	**2**	**3**	**4**

Main features

The main features of the **BMENOP0300** module are as follows:
- Compatible with the entire range of M580 CPUs, in both standalone and redundant configuration:
  - Ring topologies on 2 Ethernet ports using RSTP (Rapid Spanning Tree Protocol)
- Cybersecurity features:
  - IEC 62443/ISA99 Achilles Level 2 certification
  - IPSec for IP-based communication
- IEC 61850 services:
  - MMS messaging server and client
  - GOOSE publisher and subscriber
- Network management using SNMP (Simple Network Management Protocol)
- Time synchronization: to be able to synchronize with external time servers and update the internal clock
- Modbus TCP support (limited, no I/O scanning)

Capabilities

The capabilities per module are:
- 16 logical devices
- MMS server: 16 concurrent connections, 64 report control blocks instances, 8 instances for one report control block, 68 data sets, 256 data attributes/data set, URCB and BRCB reports
- Control model: DOes, SBOes, DOns, SBOns
- MMS client: 32 concurrent connections
- GOOSE: 4 control blocks for GOOSE publish and 32 control blocks for GOOSE subscribe, up to 256 inputs/data set

Modicon X80 modules platform
Wi-Fi access point module

PMXNOW0300 Wi-Fi access point

Presentation

The **PMXNOW0300** Acksys partner Wi-Fi access point module consists of a WLAN wireless connection combined with a 3-port 10/100 Ethernet switch.
This module is designed to be integrated in the Modicon X80 I/O platform Modicon processor *(1)*. It retrieves the 24 V voltage from the backplane rack and occupies one slot in it. An Ethernet cable, supplied with the module, must be used to connect the Wi-Fi module to the processor or the communication module (BMXNO●●●●●).
This module offers the following functions:

- Access point
- Ethernet bridge
- Wi-Fi repeater

The PMXNOW0300 is compatible with the majority of Ethernet-based protocols, including Modbus TCP, EtherNet/IP, etc.
It also allows Wi-Fi access to the associated Modicon processor from Vijeo Citect and EcoStruxure Control Expert software as well as data exchanges between automation platforms.

The PMXNOW0300 module can be removed and replaced while the rack is powered up. It is compatible with Vijeo Design' Air and Vijeo Design' Air Plus, allowing the HMI to be remotely located on a tablet or smartphone *(2)*.

Main characteristics

Type of device
Wi-Fi access point, client and repeater
Wi-Fi standards
IEEE 802.11 a/b/g/h
Operating frequencies
2.4 GHz and 5 GHz
IP rating
IP30
Mounting
On the rack
Number of radios
1
Nominal data rate
≤108 Mbps (Super AG mode, 54 Mbps in standard mode)
Antenna connections
1 x RP-SMA
Ethernet connections
3 x 10/100 BASE TX, MDI-MDIX
Wi-Fi connections
1 x WLAN interface
Range
Up to 300 m/*984 ft* in free field with the antenna supplied as standard and up to 5 km/*3 mi* with external antenna (frequency range and data rate dependent on antenna type)
Dimensions
97 x 32 x 104 mm/*3.82 x 1.26 x 4.09 in.*
Storage temperature
- 40 °C to + 80 °C/- *40 °F to + 176 °F*
Humidity
Max. 95% (non-condensing)
Supply voltage
+ 24 V ⎓ from the Modicon X80 I/O platform rack
Consumption
3.5 W typical

(1) Only for processors compatible with the Modicon X80 I/O platform (see page 1/8).
(2) For more information, please consult our website www.schneider-electric.com.

Modicon X80 modules platform
GPS time server module

Technology Partner

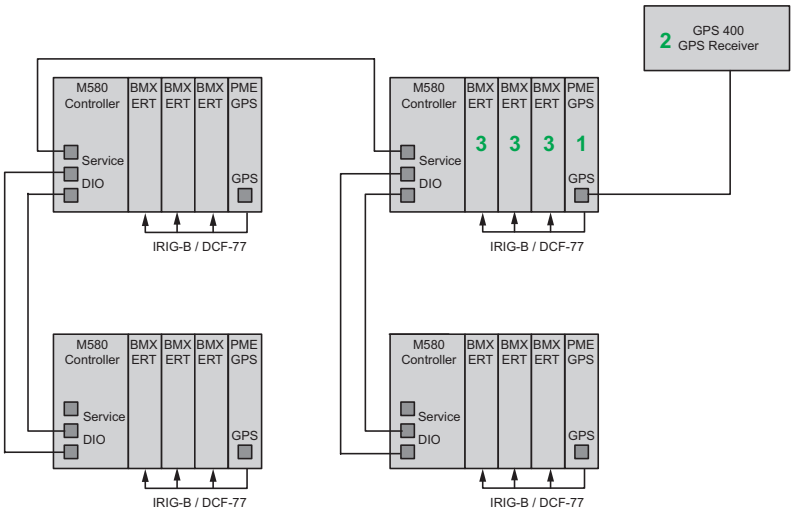
PMEGPS0100 module

Presentation

The **PMEGPS0100** Monaghan partner GPS time server module **1** is a precision network server and serial time server with a GPS interface **2**. It provides time for network connected devices using Precision Time Protocol (PTP) and Network Time Protocol (NTP) and for direct connected devices using IRIG-B and DFC-77 time protocols.

The **PMEGPS0100** module is specifically designed to operate with the BMXERT1604 time-stamping module **3** (see pages 3/32 to pages 3/33) and supplies the required 5 VDC IRIG-B or 24 VDC DCF-77 time code signals.

The **PMEGPS0100** module is installed on the Ethernet backplane:



Operating modes

Three operating modes are available:
- PTP Grand Master clock mode: The **PMEGPS0100** module is connected to a GPS receiver and its internal clock synchronizes with the GPS satellite.
- PTP Slave clock mode: The **PMEGPS0100** module is not connected to a GPS receiver and searches on the network for a PTP master clock to synchronize with.
- Master clock mode: The **PMEGPS0100** module's internal crystal oscillator is used as the time base for synchronizing.

Advantages

- Device DDT with enhanced diagnostics to be used in the customer application
- Web-based diagnostics
- Simple, compact size, all in one, which reduces installation time
- Supports hot-swap operation
- Compliant with Modicon M580 architectures, including redundant architectures Simplex operation is supported in both local and remote Ethernet X80 racks
- Embedded Web server for data access and configuration
- NTP time server for M580 CPU
- Automatically switches between GPS and network time synchronization
- Network time synchronization supports multiple master clocks with automatic failover

Modicon X80 modules platform
GPS time server module

Diagnostics and wiring

●	RUN	Module operation
●	ERR	Error condition detected
●	MASTER	Master mode
●	INTERNAL	
●	GPS	GPS clock synchronization
●	PTP	Crystal clock time base
●	GOOD	< 100 uS time error detected
●	FAIR	100 uS < time error detected < 50 uS
●	POOR	Time error detected > 50 uS
●	BAD	Clock never synchronized with time source

Plug for 3.3 V ⎓ R5-485 serial time code signal (3 positions)

Plug for 24 V ⎓ serial time code signal (2 positions)

RJ-45 connector for GPS receiver connection

Green LED for GPS receiver RX data

Yellow LED for GPS receiver 1 PPS

Characteristics

Time and GPS position data

Available to the M580 CPU

Product compatibility

- Processor: BMEP58●●●
- Drop adapter: BMECRA31210
- Backplane: BMEXBP●●●

Power consumption in W

170 mA @ 3.3 V ⎓ = 0.561 W
100 mA @ 24 V ⎓ = 2.4 W

Consumption on the Ethernet backplane bus

1.4 W

Time code protocols

- ■ Serial:
  - □ IRIG-B Time Code Generator
  - □ DCF-77 Time Code Generator
- ■ Network:
  - □ IEEE-1588 Precision Time Protocol (PTP)
  - □ Network Time Protocol (NTP)

Serial time code outputs

3.3 V ⎓ RS-485 differential 32 loads maximum
24 V ⎓ unipolar @ 100 mA maximum sink or source

Accuracy

+/- 1 uS 95%

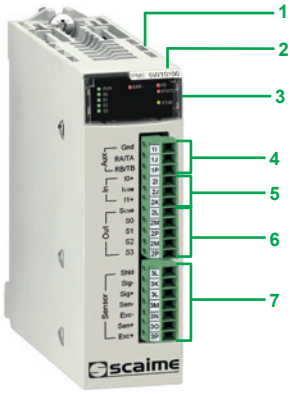
Modicon X80 modules platform
Weighing module

Technology Partner
Schneider Electric

PMESWT0100 Scaime partner weighing module



PMESWT0100

Presentation

The **PMESWT0100** Scaime partner weighing module is integrated in a Modicon X80 I/O platform with an Ethernet + X-bus **BMEXBP●●00(H)** rack and a Modicon M580 **BMEP58●0●0** PLC or in a Modicon X80 RIO drop with an Ethernet + X-bus **BMEXBP●●00(H)** rack and a **BMECRA31210** adapter.

With this module it is possible to go beyond the scope a of simple weighing application.

It is suitable for static weighing applications such as silo level measurement and scale weighing and it is also well suited to low-speed dynamic weighing applications such as filling, dosing, and material transfer.

The Modicon X80 I/O platform can manage the whole weighing environment as well as the whole machine or industrial process associated with the weighing system. Indeed, weighing data is accessible by the PLC via implicit exchanges or explicit commands. Once the weighing signal is received, it is processed and transferred by the weighing module to the Modicon M580 PLC via the Ethernet backbone.

This Ethernet weighing transmitter offline configuration, online calibration, monitoring, and weighing diagnostics are achieved using EcoStruxure Control Expert *(1)* software via FDT/DTM.

The Scaime partner weighing module has been developed to comply with the general standards and certifications of the Modicon X80 I/O platform. For more information, see page 8/2 or consult our website www.schneider-electric.com.

Description

The **PMESWT0100** weighing module features the following:

1 A rigid body providing support and protection for the electronic card
2 A module reference marking (a label is also visible on the right-hand side of the module)
3 A module and channel status display block
4 Screw terminals for connecting an external HMI output
5 Screw terminals for connecting discrete reflex inputs
6 Screw terminals for connecting discrete reflex outputs
7 Screw terminals for connecting input load cells

Main characteristics

Measurement input

1 weighing channel per module, comprising up to 8 load cells connected via junction box

Input load cell supply voltage

5 V ⎓

Internal resolution

24-bit converter

User resolution

Up to 1,000,000, factory-calibrated 500,000 at 2 mV/V

Internal measurement rate

6 to 400 measurements per second

External measurement rate

100 measurements per second

Discrete reflex outputs

Number of applications

4 positive logic outputs, 2 for dosing and 2 for threshold monitoring

Maximum voltage

55 V ⎓

Nominal current

400 mA

Response time

2 ms discrimination

Discrete inputs

Number of applications

2 positive logic inputs, weighing functions

Low voltage range

0…3 V ⎓

High voltage range

9…28 V ⎓

High current

20 mA at 24 V ⎓

(1) EcoStruxure Control Expert software continues the Unity Pro range of software and corresponds to versions ≥ 14 of Unity Pro.

Modicon X80 modules platform
Diagnostic module

Technology Partner
Schneider Electric

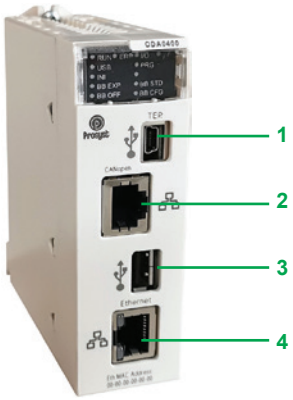
Presentation

The **PMXCDA0400** Prosyst partner diagnostic module is a powerful solution designed to improve M340 and M580 PLC system behavior as far as debugging, setting, diagnostics, predictive maintenance, safety, process traceability, control and optimization, etc., are concerned. It is installed on the X-bus where it detects and time-stamps all I/O evolutions, at the same pace as they are refreshed by the PLC tasks (Mast or Fast), and with full transparency.

Target segments include:
- Manufacturing
- Modular and complex machines
- Infrastructure and applications with strict functional safety restrictions

The main features of the **PMXCDA0400** module are as follows:
- Single slot module for M340 and M580 PLCs
- Local storage capacity for the “Black Box” function
- Ethernet and USB ports (Host and Device) on the front of the module
- Consumption on the X-bus: 1.1 A

The **PMXCDA0400** module is to be used with the AIDMAPII V2.6 software (PLX ADGxxx).



PMXCDA0400 module

Description

Technical features

- Single slot module, to be installed on the X-bus
- Power consumption: 1.1 A on the 3.3 V bus supply (peak 1.7 A)
- On the front of the module:

1 A mini-USB port (USB “device”) for changing the IP address
2 An RJ45 CANopen port for direct connection on the CAN bus (CANopen I/O monitoring not available for the V1.0 version of **PMXCDA0400**)
3 A USB port (USB “host”) to back up the **PMXCDA0400** mass memory
4 An RJ45 connector for Ethernet TCP/IP communication

- Flash disk memory available for local data storage
- Powerful dual-core processor (allowing the development of customized solutions to meet specific customer needs)
- Main **PMXCDA0400** function: detection of any I/O changes on the X-bus, when the I/O are refreshed by the PLC CPU. **PMXCDA0400** can also monitor internal PLC variables if needed.
- I/O systems and PLC variables monitoring for:
  - Any type of I/O refreshed on the X-bus segment (in-rack, IO Scanning, AS-Interface)
  - Application’s internal variables and “system” variables

PMXCDA0400 module features

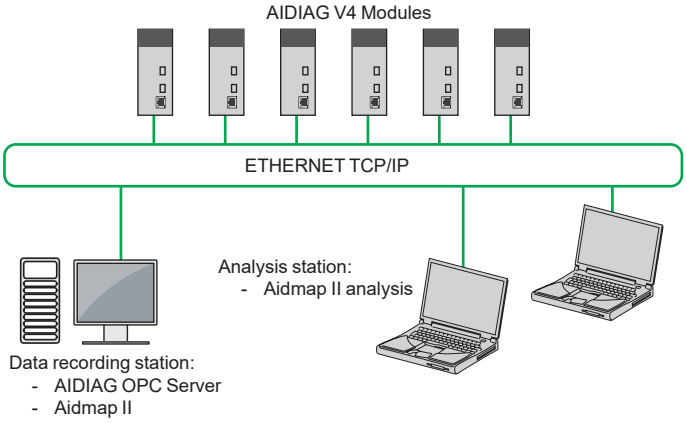
- Compatible with all types of M340 and M580 CPU, as well as all UNITY Pro/ EcoStruxure Control Expert applications
- No declaration required during PLC configuration
- Can be installed in any slot on the main rack or any extension rack of the M340 or M580 PLC
- Module insertion is possible when the PLC is running
- Automatically downloads the PLC configuration (via the X-bus), analyzes it, and starts to record all of the I/O evolutions (“plug and play”) - the **PMXCDA0400** module is ready in parallel to provide OPC client connected applications
- A software configuration tool allows the user to specify the I/O list to monitor, and to declare the internal PLC variables that they wish to log (%M, %MW, %MD, %MF, %S, %SW).

Operating modes

Two main operating modes are available for the **PMXCDA0400** module:

Continuous data acquisition mode

One or several applications are connected to the PMXCDA0400 networked module(s), in order to acquire, diffuse, and store the I/O evolutions time-stamped by the **PMXCDA0400** module.



■ Communication between the **PMXCDA0400** module(s) and the client applications may use Ethernet TCP/IP (RJ45 port on the front of the module: 100 MB).
■ These client applications may be:
□ The OPC server, for providing OPC client applications with **PMXCDA0400** data (AIDMAPII software PLXADGxxx), or any other OPC client (SCADA application…)
□ The "Black Box" management software, provided with the **PMXCDA0400** module, to periodically back up the **PMXCDA0400** mass memory (no continuous flow of data on the network)

"Standalone" mode

This mode is used to download all or part of the mass memory "on demand":
■ The embedded storage of the process data evolutions is a large "rotating buffer" with a huge storage capacity, depending on the type and number of variables monitored by the **PMXCDA0400** module, and depending on the process dynamics (can store months of process history).
■ The archives obtained by emptying the mass memory are used to generate AIDMAPII files, with the option to automatically import a predefined AIDMAPII configuration, in order to provide instant analysis or statistics for the corresponding period of time.

This mode is also used for periodic local connection of a data logger (PC station with the AIDMAPII software PLXADGxxx).

Modicon X80 modules platform
Ethway module

Technology Partner
Schneider Electric

Presentation

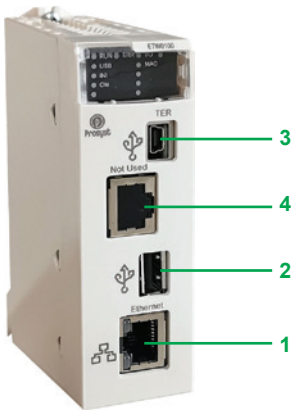
The **PMXETW0100** Prosyst partner Ethway module helps to ensure connectivity between M580 and Telemecanique legacy ranges (Premium & TSX Series 7) through the X-Way communication protocol Ethway. It also helps to ensure connectivity between M580 and the APRIL legacy range.

PMXETW0100 provides three main services:
- UNITE server
- UNITE client
- Common words

Advantages

The **PMXETW0100** module provides a simple and consistent solution to interconnect M580 to the Telemecanique and APRIL legacy ranges using the Ethway protocol (Premium, TSX Series 7), even though the M580 does not support X-Way protocols. This offers users the option to connect an M580 CPU in an Ethway network during the migration phase.

Target segments:
- Manufacturing industry (automotive, etc.)
- Steel, metal
- Energy (off-shore, hydroelectric, etc.)
- Infrastructure (airports, etc.)
- Consumer Packaged Goods



PMXETW0100 Ethway module

Description

Technical overview

- **PMXETW0100** is a single slot module, to be installed on the X-bus.
- Valid for M580 PLC only.
- Power consumption is 1.1 A on the 3.3 V bus supply (peak 1.7 A).
- A maximum of 2 modules is allowed in an M580 configuration (local rack). They cannot be mounted on extended eRIO racks.
- **PMXETW0100** does not provide an X-Way router function between 2 Ethway modules.
- The module is configured via the web page.
- Support three types of function exclusively: UNITE Server, UNITE Client, and Common Words
- The module implements requests from version 1 and 2 of the UNITE protocol.

Hardware overview

The **PMXETW0100** module includes:
1 Only one Ethernet port to connect the system to the inter-controller network
2 One USB port (USB “host) to allow installation and update of the module firmware
3 A mini-USB to access the web page
4 A second RJ45 port, not used for this module, equipped with a protective plug

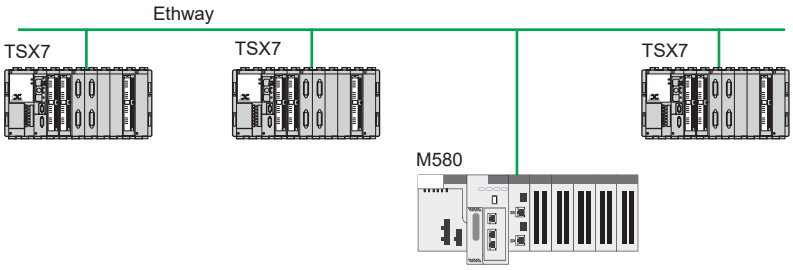
The **PMXETW0100** module shares its data with the M580 PLC under an X-bus service.

Modicon X80 modules platform
Ethway module

Use cases

Use case 1: Communication through a common network

In this use case, the **PMXETW0100** module is used to enable the M580 PLC to integrate an Ethway network by providing the functional level as close as possible to a real Ethway module of a TSX7 or APRIL PLC.
It allows users to interconnect the M580 to a Telemecanique or APRIL legacy range throughout the migration phase.
The M580 is capable of communicating directly through Ethway with the devices sharing its network. Each M580 controller integrated in the Ethway network is equipped with an Ethway module.



Use case 2: Communication through a subnetwork

In this use case, the M580 can access a subnetwork using a station from its network as a bridge. This allows the M580 to communicate via another X-way network (FipWay, MapWay). However, the M580 cannot access stations communicating through a fieldbus (UniTelway, FIPIO).

Treatment for severe environments
Ruggedized modules

Presentation

Protective treatment of Modicon X80 I/O platform

The Modicon X80 I/O platform complies with “TC” treatment requirements (treatment for all climates). It is designed as standard to operate in temperatures ranging from 0 to +60 °C/*32 to 140 °F*.
For installations in industrial environments corresponding to “TH” (treatment for hot and humid environments), devices must be housed in enclosures providing at least IP54 protection as specified by standard IEC/EN 60529, or an equivalent level of protection according to NEMA 250.

The Modicon X80 I/O platform offers **IP20 protection** *(1)*. It can therefore be installed without an enclosure in reserved access areas that do not exceed **pollution level 2** (control room with no conductive dust). **Pollution level 2** does not take account of harsher environments, such as those where the air is polluted with conductive dust, fumes, corrosive or radioactive particles, vapors or salts, molds, insects, etc. All the safety hardware in-rack modules colored red (processor, coprocessor, X80 I/O) are conformal coated for use in severe environments.

Treatment for severe environments

If the Modicon X80 I/O platform has to be used in more severe environments or is required to start and operate in an extended temperature range, from **-25 °C to +70 °C/*-13 °F to 158 °F*** *(only H or T version)*, the “***ruggedized***” offer features industrially hardened processor and power supply modules, X-bus and Ethernet I/O modules and racks that have a protective coating on their circuit boards.

***Note**: Capable of **starting** within an extended temperature range (from **-25 °C to +70 °C/-13 °F to 158 °F**, a single-rack configuration is also able to **operate at extremely low temperatures** (as low as **-40 °C/-40 °F**) if placed in an appropriate enclosure. Please contact our Customer Care Center.*

The coated/harsh offer provides the Safety CPU/coprocessor and Safety I/O modules with “AVR 80” coating on their electronic cards.This treatment increases the isolation capability of the circuit boards and their resistance to:
- Condensation
- Dusty atmospheres (conducting foreign particles)
- Chemical corrosion, in particular during use in sulfurous atmospheres (oil refinery, purification plant, etc.) or atmospheres containing halogens (chlorine, etc.) or chemical vapors

This protection, combined with appropriate installation and maintenance, enables Modicon X80 I/O products to be used in the following environments:

- **Harsh chemical environments (products with suffix ‘H’ and ‘C’):**

The use of contact grease protection on connectors, removal blocks is mandatory to meet these requirements. The lubricant protection seals electrical contacts from oxygen, moisture, aggressive gasses, and other hostile elements.

- **IEC/EN 60721-3-3 class 3C4:**
  - 7 days; 25 °C/*77 °F* relative humidity 75%
  - Concentrations (ppb): H_2S: 9,900/SO_2: 4,800/Cl_2: 200
- **ISA S71.04 classes G1 to Gx:**
  - 14 days; 25 °C/*77 °F* relative humidity 75%
  - Concentrations (ppb): H_2S: 60/SO_2: 350/Cl_2: 1,450/NO_2: 12
- **IEC/EN 60068-2-52 salt mist, Kb test severity level 2:**
  - 3 x 24-hour cycles
  - 5% NaCl
  - 40 °C/*104 °F* relative humidity 93%
- **Extreme climate environments (products with suffix ‘H’ and ‘T’):**
- Temperatures ranging from -25 to +70 °C/*-13 to 158 °F*
- Relative humidity levels up to 93% from -25 °C/*-13 °F* to +60 °C/*140 °F*
- Formation of ice
- Altitudes from 0 to 5,000 m/*0 to 16,404 ft*

***Note**: Some products with the suffix 'C' also operate in an extended temperature range (from **-25 °C to +60 °C/-13 °F to 140 °F**). Please contact our Customer Care Center.*

F19_ACC_CPMFS17008

BMXGEL0025

Specific characteristics for Safety modules

All the Safety modules are coated and only exist with this surface treatment. There is no T, C, or H extension in the product references. Safety modules are compatible with:
- a temperature range from -25...+60 °C/*-13...140 °F*
- corrosive environments using common H components

A protective gel is needed to cover all electrical connections on X80 products used in corrosive environments.

This gel comes in a 25 g tube and can be ordered separately under the reference **BMXGEL0025**.

*(1) Each slot in a **BM●XBP●●00** rack is equipped as standard with a protective cover that should only be removed when inserting a module. If any covers are subsequently misplaced, replacements can be ordered under reference **BMXXEM010** (sold in lots of 5).*

Composition

References and characteristics

To order ruggedized modules and racks, see the reference from below to page 6/11 (the references of the ruggedized products available include the suffix "**H**" and the conformal coated products available include the suffix "**C**").
The standard separate parts (cordsets, cables, sub-bases, etc.) that are compatible with the ruggedized modules offer are listed in the reference pages (see from below to page 6/11).
The majority of operating and electrical characteristics of ruggedized modules are identical to those of their equivalent standard versions. However, some characteristics are subject to either derating or limitation. Please consult our website www.schneider-electric.com.

Ruggedized power supply modules

Each **BM●XBP●●00H** rack must be equipped with a power supply module. **BMEXBP●●02H** must be equipped with 1 or 2 redundant power supply modules. These modules are inserted in the leftmost power supply slots of each rack (marked CPS).

The available power values given below in ***bold italic*** correspond to operation at -25 °C/*-13 °F* and +70 °C/*+158 °F* (see temperature derating curves on our website www.schneider-electric.com).
The power required to supply each rack depends on the type and number of modules installed in the rack. It is therefore necessary to draw up a power consumption table for each rack in order to determine which is the most appropriate **BMXCPS●●●●H** power supply module for your requirements (consult our website www.schneider-electric.com).

Power supply modules *(1)*

	BMXAMO0802H	One 20-way removable terminal block and one 25-way SUB-D connector for ABE7CPA02 sub-base	1.5 m/ *4.92 ft*	BMXFTA152	0.374/ *0.825*
			3 m/ *9.84 ft*	BMXFTA302	0.500/ *1.102*

*(1) The shielding on the cordsets carrying the analog signals must always be connected to the **BMXXSP●●00** shielding connection kit mounted under the rack holding the analog modules (see page 2/3).*
*(2) The **BMXART0814H** 8-channel module requires two **ABE7CPA412** sub-bases and two **BMXFCA●●2** cordsets.*
(3) When using Modicon Telefast pre-wired system in corrosive atmosphere, apply a protective coating of grease to connectors and terminal blocks.

- **Certifications for automation products and EC regulations** ..... *page 8/8*

Standards and certifications

The Modicon X80 I/O platform has been developed to comply with the principal national and international standards concerning electronic equipment for industrial automation systems.

- Requirements specific to programmable controllers: functional characteristics, immunity, resistance, safety, etc.: IEC/EN 61131-2, IEC/EN/UL/CSA 61010-2-201, and UL508
- Requirements specific to power utility automation systems: IEC/EN 61000-6-5, IEC/EN 61850-3
- Merchant navy requirements of the major international organizations: unified in IACS (International Association of Classification Societies)
- Compliance with European Directives for CE marking:
  - Low voltage: 2014/35/EU
  - Electromagnetic compatibility: 2014/30/EU
  - Machinery: 2006/42/EC
  - Ex areas:
    - For USA and Canada: Hazardous location class I, division 2, groups A,B,C, and D
    - For other countries: CE ATEX (2014/34/EU) or IECEx in defined atmosphere Zone 2 (gas) and/or Zone 22 (dust)

Up-to-date information on which certifications have been obtained is available on our website.

The X80 I/O platform is considered as open equipment and is designed for use in industrial environments, in pollution degree 2, overvoltage category II (IEC 60664-1), and in low-voltage installations, where the main power branch is protected on both wires by devices such as fuses or circuit breakers limiting the current to 15A for North America and 16A for the rest of the world.

All Safety modules are certified by TÜV Rheinland. The certificate reviews the following standards:

Functional safety specifications

IEC 61508: Functional safety of electrical/electronic/programmable electronic safety-related systems

- IEC 61508-1 - Part 1: General requirements
- IEC 61508-2 - Part 2: Requirements for electrical/electronic/programmable electronic safety-related systems
- IEC 61508-3 - Part 3: Software requirements

IEC 61511: Functional safety - Safety instrumented systems for the process industry sector

- IEC 61511-1 - Part 1: Framework, definitions, system, hardware and software requirements
- IEC 61511-2 - Part 2: Guidelines for the application of IEC 61511-1
- IEC 61511-3 - Part 3: Guidance for the determination of the required safety integrity levels

Safety machinery specifications

- IEC 62061: Safety of machinery - Functional safety of safety-related electrical, electronic and programmable electronic control systems
- ISO 13849-1: Safety of machinery - Safety-related parts of control systems - Part 1: General principles for design
- ISO 13849-2: 2012 Safety-related parts of control systems - Part 2: Validation

Fire & Gas specifications

- EN54.2: 1997 + Amd1 2007 fire detection + fire alarms systems – Part 2: Control and indicating equipment
- EN 50156-1: 2015 Electrical equipment for furnaces and ancillary equipment - Part 1: Requirements for application design and installation
- EN 50130-4: 2011 Immunity requirements components of fire, intruder, holdup, CCTV, access control and social alarms systems
- EN 298: 2012 Automatic burner control systems for burners and appliances burning gaseous or liquid fuels
- NFPA 85: 2015 Boiler and Combustion Systems Hazards Code
- NFPA 86: 2015 Standard for Ovens and Furnaces
- NFPA 72: 2016 National Fire Alarm and Signaling Code

Protective treatment of the Modicon X80 I/O platform

The Modicon X80 I/O platform meets the requirements of “TC” treatment (treatment for all climates).
For installations in industrial production workshops or environments corresponding to “TH” treatment (treatment for hot and humid environments), Modicon X80 I/O must be housed in enclosures with minimum IP54 protection.

The Modicon X80 I/O platform offers **protection to IP20 level** and **protection against access to terminals** (enclosed equipment) *(1)*. It can therefore be installed without an enclosure in reserved-access areas that do not exceed **pollution level 2** (control room with no dust-producing machinery or activity). Pollution level 2 does not take account of more severe environmental conditions: air pollution by dust, smoke, corrosive or radioactive particles, vapors or salts, molds, insects, etc.

(1) In cases where a slot is not occupied by a module, a **BMXXEM010** *protective cover must be installed.*

(CE): *Tests required by European directives* (CE) *and based on IEC/EN 61131-2 standards.*

Magnetic field	**IEC/EN 61131-2; IEC 61000-4-8** (for MV power stations: **IEC 61000-6-5; IEC 61850-3**) For functional safety (DS criteria): **IEC 61000-6-7; IEC 61326-3-1**	Power frequency: 50/60 Hz, 100 A/m continuous ...1000 A/m; t = 3 s; 3 axes
	IEC 61000-4-10	Oscillatory: 100 kHz...1 MHz, 100 A/m; t = 9 s; 3 axes
Conducted common mode disturbances range 0 Hz …150 kHz	**IEC 61000-4-16** (for MV power stations: **IEC 61000-6-5; IEC 61850-3**) For functional safety (DS criteria): **IEC 61000-6-7; IEC 61326-3-1**	For remote systems: ■ 50/60 Hz and ⎓, 300 V, t = 1s ■ 50/60 Hz and ⎓, 30 V, t = 1 min ■ 5 Hz…150 kHz, sweep 3 V…30 V ■ For AC: 10 V ■ For DC: 10 V cont. or 100 V, t = 1 s

Where:
- PS1 applies to PLC supplied by battery, PS2 applies to PLC energized from ∿ or ⎓ supplies
- Un: nominal voltage, Fn: nominal frequency, Udl: detection level when powered

(1) Devices must be installed, wired, and maintained in accordance with the instructions provided in the manual "Grounding and Electromagnetic Compatibility of PLC Systems".
(2) These tests are performed without an enclosure, with devices fixed on a metal grid and wired as per the recommendations in the manual "Grounding and Electromagnetic Compatibility of PLC systems".

(CE)*: Tests required by European CE directives and based on IEC/EN 61131-2.*

Environment tests (continued)		
Name of test	**Standards**	**Levels**
Immunity to HF interference (CE) *(1)*		
Electrostatic discharges	**IEC/EN 61131-2; IEC/EN 61000-6-2; IEC 61000-4-2; IACS E10** For functional safety (DS criteria): **IEC 61000-6-7; IEC 61326-3-1**	6 kV contact; 8 kV air; 6 kV indirect contact
Radiated radio frequency electromagnetic field	**IEC/EN 61131-2; IEC/EN 61000-6-2; IEC 61000-4-3; IACS E10** For functional safety (DS criteria): **IEC 61000-6-7; IEC 61326-3-1**	80MHz…1GHz: 10/15 V/m (20 V/m DS criteria); 3 V/m, 1.4 GHz...2 GHz: 3V/m (10 V/m DS criteria) 2 GHz...6 GHz: 3V/m Sinus amplitude modulated 80%,1 kHz + internal clock frequencies

(1) Devices must be installed, wired, and maintained in accordance with the instructions provided in the manual "Grounding and Electromagnetic Compatibility of PLC Systems".
(2) Refer also to the section "Treatment for severe environments".

(CE): *Tests required by European CE directives and based on IEC/EN 61131-2 standards.*

Environment tests (continued)

Name of test	Standards	Levels
Immunity to mechanical constraints *(1)* (power on)		
Sinusoidal vibrations	**IEC/EN 61131-2;** **IEC 60068-2-6** (Fc)	Basic IEC/EN 61131-2: 5 Hz ... 150 Hz, ± 3.5 mm/*0.14 in.* amplitude (5 Hz …. 8.4 Hz), 1 g (8.4 Hz …. 150 Hz) Specific profile: 5 Hz ... 150 Hz, ± 10.4 mm/*0.41 in.* amplitude (5 Hz …. 8.4 Hz), 3 g (8.4 Hz …. 150 Hz) For basic and specific: endurance: 10 sweep cycles for each axis
	IEC 60870-2-2 ; **IEC 60068-2-6** **(Class Cm)**	2 Hz ... 500 Hz, 7 mm/*0.28 in.* amplitude (2 Hz … 9 Hz), 2 g (9 Hz … 200 Hz), 1.5 g (200 Hz … 500 Hz) endurance: 10 sweep cycles for each axis
	IACS E10	3 Hz ... 100 Hz, 1 mm/*0.04 in.* amplitude (3 Hz …. 13.2 Hz), 0.7 g (13.2 Hz …. 100 Hz) Endurance at each resonance frequency: 90 min for each axis, amplification coefficient < 10
	IEC 60068-2-6	Seismic analysis: 3 Hz ... 35 Hz, 22.5 mm/*0.89 in.* amplitude (3 Hz …. 8.1 Hz), 6 g (8.1 Hz …. 35 Hz)
Shock	**IEC/EN 61131-2;** **IEC 60068-2-27** (Ea)	30 g, 11 ms; 3 shocks/direction/axis *(2)* For M580 Safety: 15 g, 11 ms; 3 shocks/direction/axis 25 g, 6 ms; 100 bumps/direction/axis (bumps) *(3)*
Free fall during operation	**IEC/EN 61131-2;** **IEC 60068-2-32** (Ed Method 1)	1 m/*3.28 ft*, 2 falls
Name of test	**Standards**	**Levels**
Withstand to mechanical constraints (power off)		
Random free fall with packaging	**IEC/EN 61131-2;** **IEC 60068-2-32** (Method 1)	1 m/*3.28 ft*, 5 falls
Flat free fall	**IEC/EN 61131-2;** **IEC 60068-2-32** (Ed Method 1)	10 cm/*0.33 ft*, 2 falls
Controlled free fall	**IEC/EN 61131-2;** **IEC 60068-2-31** (Ec)	30° or 10 cm/*0.33 ft*, 2 falls
Plugging/Unplugging	**IEC/EN 61131-2**	For modules and connectors: Operations: 50 for permanent connections, 500 for non-permanent connections
Name of test	**Standards**	**Levels**
Equipment and personnel safety *(1)* (CE)		
Dielectric strength and insulation resistance	**IEC/EN 61131-2;** **IEC 61010-2-201; UL; CSA**	Dielectric: 2 Un + 1000 V; t = 1 min Insulation: Un ⩽ 50 V: 10 MΩ, 50 V ⩽ Un ⩽ 250 V : 100 MΩ
Ground continuity	**IEC/EN 61131-2;** **IEC 61010-2-201; UL; CSA**	30A, R ⩽ 0,1Ω; t = 2 min
Leakage current	**IEC/EN 61131-2;** **IEC 61010-2-201; UL; CSA**	⩽ 0.5 mA in normal condition ⩽ 3.5 mA in single fault condition
Protection offered by enclosures	**IEC/EN 61131-2;** **IEC61010-2-201;**	IP20 and protection against standardized pins
Impact withstand	**IEC/EN 61131-2;** **IEC 61010-2-201; UL; CSA**	Sphere of 500 g, fall from 1.3 m/*4.27 ft* (energy 6.8 J minimum)
Overload	**IEC/EN 61131-2;** **IEC 61010-2-201; UL; CSA**	50 cycles, Un, 1.5 In; t = 1 s ON + 9 s OFF
Endurance	**IEC/EN 61131-2;** **IEC 61010-2-201; UL; CSA**	In, Un; 6,000 cycles: t = 1 s ON + 9 s OFF
Temperature rise	**IEC/EN 61131-2; UL; CSA; ATEX; IECEx**	Ambient temperature 60 °C/*140 °F* [for ruggedized range: 70 °C/*158 °F*] *(4)*
Name of test	**Standards**	**Levels**
Specific environment *(4)*		
Corrosion areas - gas, salt, dust	**ISA S71.4**	Flowing mixed gas; class Gx, 25 °C/77 °F, 75% relative humidity, t = 14 days
	IEC/EN 60721-3-3 **IEC60068-2-60**	Flowing mixed gas; class 3C3, 25 °C/77 °F, 75% relative humidity, t = 14 days
	IEC/EN 60721-3-3 **IEC60068-2-60**	Flowing mixed gas; class 3C4, 25 °C/77 °F, 75% relative humidity, t = 7 days
	IEC60068-2-52	Salt spray: test Kb, severity 2
	IEC/EN 60721-3-3 **IEC60068-2-68**	Dust and sand, Arizona dust, class 3S4, 20 cycles
	IEC/EN 60721-3-3 **IEC60068-2-10**	Mold growth, fungal spore, class 3B2, t=28 days

(1) Devices must be installed, wired, and maintained in accordance with the instructions provided in the manual "Grounding and Electromagnetic Compatibility of PLC Systems".
(2) When using fast actuators (response time ⩽ 5 ms) driven by relay outputs: 15 g, 11 ms; 3 shocks/direction/axis.
(3) When using fast actuators (response time ⩽ 15 ms) driven by relay outputs: 15 g, 6 ms; 100 bumps/direction/axis.
(4) Refer also to the section "Treatment for severe environments".

(CE): *Tests required by European CE directives and based on IEC/EN 61131-2 standards.*

Some countries require certain electrical components to undergo certification by law. This certification takes the form of a certificate of conformity to the relevant standards and is issued by the official body in question. Where applicable, certified devices must be labeled accordingly. Use of electrical equipment on board merchant vessels generally implies that it has gained prior approval (i.e. certification) by certain shipping classification societies.

Abbreviation	Certification body	Country
CSA	Canadian Standards Association	Canada
RCM	Australian Communications and Media Authority	Australia, New Zealand
EAC	Eurasian conformity	Russia and customs union
UL	Underwriters Laboratories	USA

Abbreviation	Classification authority	Country
IACS	International Association of Classification Societies	International
ABS	American Bureau of Shipping	USA
BV	Bureau Veritas	France
DNV	Det Norske Veritas	Norway
GL	Germanischer Lloyd	Germany
LR	Lloyd's Register	UK
RINA	Registro Italiano Navale	Italy
RMRS	Russian Maritime Register of Shipping	Russia
RRR	Russian River Register	Russia
CCS	China Classification Society	China
KRS	Korean Register of Shipping	Korea
Class NK	Nippon Kaiji Kyokai	Japan

***Note**: Due to the merger between DNV and GL certification, DNV/GL will be renewed as a single certificate from 2016.*

The following tables provide an overview of the situation as of December 2018, in terms of which certifications (listed next to their respective bodies) have been granted or are pending for our automation products.
Up-to-date information on which certifications have been obtained by products bearing the Schneider Electric brand can be viewed on our website: www.schneider-electric.com

EC regulations

European Directives

The open nature of the European markets assumes harmonization between the regulations set by the member states of the European Union. European Directives are texts intended to remove restrictions on free circulation of goods and which must be applied within all European Union states.
Member states are obligated to incorporate each Directive into their national legislation, and to simultaneously withdraw any regulations that contradict it.
Directives - and particularly those of a technical nature with which we are concerned - merely set out the objectives to be fulfilled (referred to as “essential requirements”). Manufacturers are responsible for taking the necessary measures to establish that their products conform to the requirements of each Directive applicable to their equipment.
As a general rule, manufacturers certify compliance with the essential requirements of the Directive(s) that apply to their products by applying a CE mark. The CE mark is affixed to our products where applicable.

Significance of the CE mark

The CE mark on a product indicates the manufacturer's certification that the product conforms to the relevant European Directives; this is a prerequisite for placing a product that is subject to the requirements of one or more Directives on the market and allowing its free circulation within European Union countries. The CE mark is intended for use by those responsible for regulating national markets.
Where electrical equipment is concerned, conformity to standards indicates that the product is fit for use. Only a warranty by a well-known manufacturer can provide reassurance of a high level of quality.
As far as our products are concerned, one or more Directives are likely to apply in each case; in particular:

- The Low Voltage Directive (2014/35/EU)
- The Electromagnetic Compatibility Directive (2014/30/EU)
- The ATEX CE Directive (2014/34/EU)
- The Machinery Directive (2006/42/EU)

Hazardous substances

These products are compatible with:

- The WEEE Directive (2012/19/EU)
- The RoHS Directive (2011/65/EU)
- The China RoHS Directive (Standard GB/T 26572-2011)
- REACH regulations (EC 1907/2006)

Note: *Documentation on sustainable development is available on our website www.schneider-electric.com (product environmental profiles and instructions for use, RoHS and REACH directives).*

End of life (WEEE)

End of life products containing electronic cards must be dealt with by specific treatment processes.
When products containing backup batteries are unusable or at end of life they must be collected and treated separately. Batteries do not contain a percentage by weight of heavy metals above the limit specified by European Directive 2013/56/EU.

A dedicated services offer for your installed base

Schneider Electric, with its experts, products and dedicated tools, provides services such as system design, consultancy, maintenance contracts, modernization of facilities or delivering projects.

The Schneider Electric services offer is structured around several key areas:

- Maintenance and support services:
  - A set of services to help maintain reliability and availability of automated control systems. These services may be the subject of a bespoke maintenance contract to meet your requirements more closely.
- Consultancy services:
  - Diagnostics of the installed base
- Modernization solutions:
  - Migration solutions including consultancy, expertise, tools and technical support to help ensure a smooth transition to newer technology while keeping the wiring and the encoding in most cases.

Customization services are also available to accommodate specific requirements. For more information, please consult the specific pages on our website www.schneider-electric.com/automationservices

Maintenance and support services

Spare parts, exchanges and repairs

Everything you need to get equipment working again as quickly as possible

Solutions to respond very quickly to requests for spare parts, exchanges and repairs to your installed automation equipment (automation platforms, Human Machine Interfaces, drives, distributed I/O):

- Spare parts management:
  - Identification of critical parts
  - Stock of spare parts: a Schneider Electric owned stock of spare parts, on your site or in one of our warehouses, with immediate availability on site or a contractually agreed delivery time if stored off site
  - Testing of spare parts stored on site
  - Automatic stock filling
- Repairs:
  - Broken down products are repaired in a network of worldwide repair centres. For each repaired product, our experts provide a detailed report.
- On-site repair:
  - Our experts' knowledge and expertise
  - Monitoring of specific repair procedures
  - Availability of our teams to respond 24/7
- Exchanges:
  - With standard replacements, receive a new or reconditioned product before the broken down product has even been sent back
  - Fast exchanges offer the option to receive the replacement product within 24 hours (in Europe)

Preventive maintenance

Improving and guaranteeing the long-term reliability and performance of your installations

Schneider Electric's preventive maintenance expert assesses your site, the equipment to be managed and sets up a maintenance program to accommodate specific requirements. A list is provided of the tasks to be performed and their frequency, including site-specific tasks, describing how preventive maintenance is to be managed.

Extended warranty

An additional manufacturer warranty covering replacement or repair of the equipment

The extended warranty offers the option to take out a 3-year warranty. The warranty period can vary according to the geographical area, consult your Customer Care Centre.

Online support

Access to dedicated experts

Priority access to experts who can answer technical questions promptly concerning equipment and software both on sale and no longer commercially available.

Software subscription

Access to software upgrades and new features

By subscribing to software updates, users are able to:

- Purchase licences
- Receive updates, upgrades, software migrations and transitions
- Download software from Schneider Electric's software library

A dedicated services offer for your installed base

Consultancy services

M2C (Maintenance and Modernization Consultancy)

Professional tools and methods, proven experience of managing obsolescence and updating installed bases, to reduce downtimes and improve performance

With our maintenance and modernization consultancy offer, Schneider Electric will help you check the state of your installed base by:

- Defining the scope and depth of the analysis in collaboration with you
- Collecting the technical data without shutting down production
- Analyzing and identifying avenues for improvement
- Producing a recommendation plan

Customer benefits:

- Learning about the components that make up the installed base and how up-to-date they are
- Better downtime anticipation
- Expert advice designed to improve performance

Modernization solutions

Migration to EcoStruxure

Proven expertise, tools and methods to give you a clear vision of the improvement opportunities and guide you toward a successful modernization project

Schneider Electric offers gradual solutions of modernization through a set of products, tools and services that allow you to upgrade your installations with our last technologies. Our solutions offer you the choice to plan your modernization:

- Partial modernization: replacement of an old set of components with a new one
- Step by Step modernization: gradual incorporation of new Solutions or Offers in the system
- Complete modernization: total renovation of the system

EcoStruxure™

To find out more about EcoStruxure architectures, please visit our website www.schneider-electric.com/EcoStruxure

The table below lists our various migration offers:

Wide range of migration offers		Moving to M580/M340/X80 platform						
Solution		Solution Type			Tools	Solution Services		
		Change the CPU and retain the I/O racks & wiring	Change the CPU & the I/O racks & retain I/O field wiring with wiring system	Change the CPU & the I/O racks & the I/O wiring	SoftWare application conversion tool	Modernization / migration service	Manage your project	Execute your project
